DESCRIPTION

The UPC2757TB and UPC2758TB are silicon RFICs manufactured using the NESAT™ III process. The devices consist of a mixer, an IF amplifier and an LO buffer amplifier. These devices are suitable as 1st IF downconverters for the receiver stage of cellular and other wireless systems. The UPC2757TB is designed for low power consumption while the UPC2758TB is designed for low distortion. The UPC2757TB/58TB are pin compatible and have comparable performance to the larger UPC2757T/58T, so they are suitable for use as a replacement to help reduce system size. The IC is housed in a 6 pin super minimold or SOT-363 package.

Stringent quality assurance and test procedures ensure the highest reliability and performance.

PIN DESCRIPTION

Pin No.	Pin Name	Applied Voltage (V)	Pin Voltage (V)	Description	Internal Equivalent Circuit						
1	RFin	—	1.2	Signal input pin to double balanced mixer. This pin must be coupled to the signal source with a blocking capacitor.							
2	GND	0	—	Ground pin. This pin should be connected to system ground with minimum inductance. Ground pattern on the board should be formed as wide as possible.							
3	LOIn	—	1.3	LO input pin. The LO buffer is designed as a differential amplifier. Recommended input level is -15 to 0 dBm.							
4	Vps	VCC / GND	—	Power save control pin can control the On/Sleep state with bias as follows: <table border="1" data-bbox="617 1589 922 1684"><tr><th>Vps (V)</th><th>STATE</th></tr><tr><td>≥2.5</td><td>ON</td></tr><tr><td>0 to 0.5</td><td>SLEEP</td></tr></table> Rise time/fall time using this pin is approximately 10 μs.	Vps (V)	STATE	≥2.5	ON	0 to 0.5	SLEEP	
Vps (V)	STATE										
≥2.5	ON										
0 to 0.5	SLEEP										
5	Vcc	2.7 to 3.3	—	Power supply pin. This pin should be externally equipped with a bypass capacitor to minimize ground impedance.							
6	IFOUT	—	1.7	Output of single-ended push-pull IF buffer amplifier. This is an emitter-follower output with low impedance. This pin must be coupled to the next stage with a blocking capacitor.
