Description

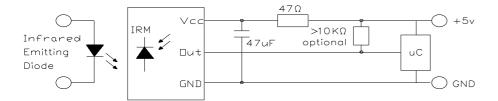

The IRM-36xxT is miniaturized receivers for infrared remote control systems. PIN diode and preamplifier are assembled on lead frame, the epoxy package is designed as IR filter. The demodulated output signal can directly be decoded by a microprocessor. IRM-36xxT is the standard IR remote control receiver series, supporting all major transmission codes.

Applications

- Light detecting portion of remote control
- AV instruments such as Audio, TV, VCR, CD, MD, etc.
- Home appliances such as Air-conditioner, Fan , etc.
- The other equipments with wireless remote control.
- CATV set top boxes
- Multi-media Equipment

Application Circuit

RC Filter should be connected closely between Vcc pin and GND pin.

Test method

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

OMeasurement place

A place that is nothing of extreme light reflected in the room.

②External light

Project the light of ordinary white fluorescent lamps which are not high

Frequency lamps and must be less then 10 Lux at the module surface.

 $(Ee \leq 10Lux)$

③Standard transmitter

A transmitter whose output is so adjusted as to Vo=400mVp-p and the output

Wave form shown in Fig.-1.According to the measurement method shown in Fig.-2 the standard transmitter is specified.

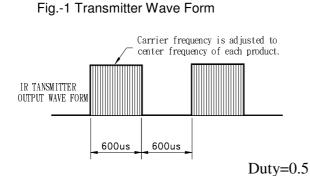

However, the infrared photodiode to be used for the transmitter should be

 $\lambda p=940$ nm, $\Delta \lambda = 50$ nm. Also, photodiode is used of PD438B(Vr=5V).

(Standard light / Light source temperature 2856°K).

④Measuring system

The Notice of Application:

Transmission of remote control signal consist of four parts: Encode Part, IR Transmitter Source, IRM device, Decode Part

- 1. When IRM-36xxT code select frequency, it need to well understand the center system of encode part.
- 2. Strong or weak light of IR Transmitter can affect distance of transmission.
- 3. When using IRM-36xxT device, it requires the composition of code pattern to reach the demand as follows:

4. It needs to ensure the translation range of decode part if it is applied to the pulse-width range.

If the above items hardly assure of its application, it'll cause NG(no good) message from the edge of signal.
