1 Product Brief

The BFP450 is a high linearity wideband NPN bipolar RF transistor. The collector design supports voltages up to $V_{CEO} = 4.5\text{ V}$ and currents up to $I_C = 170\text{ mA}$. With its high linearity at currents as low as 50 mA the device supports energy efficient designs. The typical transition frequency is approximately 24 GHz, hence the device offers high power gain at frequencies up to 3 GHz in amplifier applications. The device is housed in an easy to use plastic package with visible leads.

2 Features

- Highly linear low noise driver amplifier for all RF frontends up to 3 GHz
- Based on Infineon's reliable high volume 25 GHz silicon bipolar technology
- Output compression point $OP_{1dB} = 19$ dBm at 90 mA, 3 V, 1.9 GHz, 50 Ω system
- Output 3rd order intermodulation point $OIP3 = 31$ dBm at 90 mA, 3 V, 1.9 GHz, 50 Ω system
- Maximum available gain $G_{ma} = 15.5$ dB at 50 mA, 3 V, 1.9 GHz
- Minimum noise figure $NF_{min} = 1.7$ dB at 50 mA, 3 V, 1.9 GHz
- Pb-free (RoHS compliant) and halogen-free package with visible leads
- Qualification report according to AEC-Q101 available

Applications Examples

Driver amplifier

- ISM bands 434 and 868 MHz
- 1.9 GHz cordless phones
- CATV LNA

Transmitter driver amplifier

- 2.4 GHz WLAN and Bluetooth

Output stage LNA for active antennas

- TV, GPS, SDARS, 2.4 GHz WLAN, etc

Suitable for 3 - 5.5 GHz oscillators

Attention: ESD (Electrostatic discharge) sensitive device, observe handling precautions

1) T_S is the soldering point temperature. T_S is measured on the emitter lead at the soldering point of the pcb.

Attention: Stresses above the max. values listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit.

Notes

1. AC parameter limits verified by random sampling
2. In order to get the NF_{min} values stated in this chapter the test fixture losses have been subtracted from all measured result
3. $OIP3$ value depends on termination of all intermodulation frequency components. Termination used for this measurement is $50\ \Omega$ from 0.2 MHz to 12 GHz .

Note: The curves shown in this chapter have been generated using typical devices but shall not be considered as a guarantee that all devices have identical characteristic curves. $T_A = 25\text{ °C}$.

6 Simulation Data

For the SPICE Gummel Poon (GP) model as well as for the S-parameters (including noise parameters) please refer to our internet website: www.infineon.com/rf.models. Please consult our website and download the latest versions before actually starting your design.

You find the BFP450 SPICE GP model in the internet in MWO- and ADS-format, which you can import into these circuit simulation tools very quickly and conveniently. The model already contains the package parasitics and is ready to use for DC- and high frequency simulations. The terminals of the model circuit correspond to the pin configuration of the device.

The model parameters have been extracted and verified up to 10 GHz using typical devices. The BFP450 SPICE GP model reflects the typical DC- and RF-performance within the limitations which are given by the SPICE GP model itself.
