

DATASHEET

1.8mm Round Subminiature Silicon PIN Photodiode PD42-21B/TR8

Features

- Fast response time
- High photo sensitivity
- Small junction capacitance
- Package in 12mm tape on 7" diameter reel
- Pb free
- The product itself will remain within RoHS compliant version.

Descriptions

• PD42-21B/TR8 is a high speed and high sensitive PIN photodiode in miniature spherical top view lens SMD package and it is molded in a black plastic .The device is spectrally matched with the infrared emitting diode.

Applications

- High speed photo detector
- Copier
- Game machine
- Infrared applied system

Device Selection Guide

Part Category	Chip Material	Lens Color	
PD	Silicon	Black

Package Dimensions

Notes: 1.All dimensions are in millimeters

2.Tolerances unless dimensions ±0.1mm

Absolute Maximum Ratings (Ta=25)

Parameter	Symbol	Rating	Unit	
Reverse Voltage	V_R	32	V	
Operating Temperature	T_{opr}	-25 ~ +85		
Storage Temperature	T_{stg}	-40 ~ +85		
Soldering Temperature *1	T_{sol}	260		
Power Dissipation at(or below) 25 Free Air Temperature	P_d	150	mW	

Notes: *1:Soldering time 5 seconds.

Precautions For Use

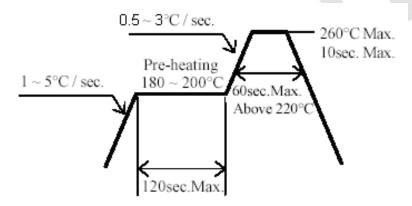

1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

- 2. Storage
 - 2.1 Do not open moisture proof bag before the products are ready to use.
 - 2.2 Before opening the package, the LEDs should be kept at 30 or less and 90%RH or less.
 - 2.3 The LEDs should be used within a year.
 - 2.4 After opening the package, the LEDs should be kept at 30 or less and 60%RH or less.
 - 2.5 The LEDs should be used within 168 hours (7 days) after opening the package.
 - 2.6 If the moisture absorbent material (silica gel) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions.

Baking treatment : 60±5 for 24 hours.

- 3. Soldering Condition
- 3.1 Pb-free solder temperature profile

- 3.2 Reflow soldering should not be done more than two times.
- 3.3 When soldering, do not put stress on the LEDs during heating.
- 3.4 After soldering, do not warp the circuit board.

4. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than 350 for 3 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

5.Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
