Why Choose a Blackfin® Processor?

- High performance, 16-/32-bit processor core with DSP and RISC functionality and programmability
 - Eliminates need for multiple separate processors
- Large portfolio of products ranging from 300 MHz to 750 MHz
 - Best-in-class MHz/mW performance
- Software controlled dynamic power management
 - Extends battery life in portable applications
- Application-tuned system peripherals
 - Provides glueless connectivity to a variety of external devices
- Many low cost pin- and code-compatible models
- Industrial temperature range allows for wide range of applications
- Supported by easy to use, world-class development tools
- On-chip flash memory available on certain models
- Processors available with Lockbox™ Secure Technology
- World-class ecosystem components and RTOS offerings from leading partners
- On-chip low power codec available on certain models

Blackfin Processors

Part Number	Package ¹	Speed (MHz)	RAM Memory (kB)	Ambient Temp Range (°C)	Key Peripherals	Price Range @ 1k (\$U.S.) ²

²All pricing is budgetary and subject to change.

³Available in automotive grade.

⁴Available on automotive-grade parts only.

⁵M designates support for 1.8 V mobile DDR memory.

Development Tools

The Blackfin processor is supported by the Analog Devices CROSSCORE® line of robust and flexible development tools.

VisualDSP++® Software

VisualDSP++ software delivers efficient project management, enabling programmers to move easily between editing, building, and debugging within a single interface. Key features include an optimizing C/C++ compiler, advanced plotting tools, embedded OS support (VDK), award-winning statistical profiling, TCP/IP and USB support, free software upgrades, and technical support.

EZ-KIT Lite® Evaluation Kit

The EZ-KIT Lite evaluation kit is a standalone evaluation board and evaluation suite of VisualDSP++ software to facilitate architecture evaluation.

EZ-Extender® Daughter Boards

EZ-Extender daughter boards enable developers to access and connect various peripherals from Analog Devices and third parties to the expansion interface of the EZ-KIT Lite evaluation kits.

Emulators

The USB-based and high performance (HP) USB-based emulators are easy, portable, nonintrusive, target-based debugging solutions. The HP USB-based emulator also supports the background telemetry channel (BTC), a nonintrusive method for exchanging data between the host and the target application without affecting the target system's real-time extended support characteristics.

EZ-Board™ Evaluation Boards

The EZ-Board evaluation board provides developers with a low cost platform for initial evaluation of the processors via an external emulator or μ Clinux.™ The EZ-Board evaluation board has an expansion interface that allows for modularity with different EZ-Extender boards.

Debug Agent Board

The Standalone Debug Agent is intended to provide a modular low cost emulation solution for EZ-Board evaluation boards as well as evaluation boards designed by third parties. The Standalone Debug Agent is very similar to the Debug Agent that is on existing EZ-KIT Lite evaluation boards but will have the flexibility to move from one board to another board.

Software Modules

Analog Devices has a wide range of tested and optimized software modules available, including decoders, encoders, codecs, and other algorithms that provide multimedia functions for the Blackfin and SHARC processor families. The software modules allow engineers to quickly and easily incorporate these functions, providing a faster development path to the end product. In addition, the highly optimized software modules feature a consistent API and framework to ensure rapid development of multiple functions. Also available is VisualAudio® 2.6 software, which enables engineers from other backgrounds to leverage a set of basic audio libraries and tools to jump-start their projects, modularize the development process, and shorten the learning curve.

Platforms and Reference Designs

Platforms and reference designs help jump-start your design. They include comprehensive software suites with documented APIs running on application-specific evaluation boards. The easy to use APIs enable customization and control of core system functions, letting you focus on adding value through product differentiation. For more information on Analog Devices platforms, reference designs, and third-party reference designs, visit www.analog.com/software.

Extended Development Tools and Support

Starter Kits

Analog Devices Starter Kits provide everything you need to get started on an application. Kits contain a Blackfin EZ-KIT Lite, EZ-Extender daughter board(s), and the software development kit (SDK), which contains sample code, "how to" documents, and various encoders/decoders that make getting started on an application easy and shorten the learning curve.

Software Development Kits

The SDK contains example software, source code, device drivers, algorithms, utilities information, and application notes that allow you to develop processor applications. The software can be used as a framework, or as examples of how to use certain aspects and peripherals, in conjunction with an ADI processor. The SDK is included in the starter kits and is also downloadable for free, provided you have the required hardware, at www.analog.com/sdk/downloads.

μ Clinux

The μ Clinux kernel and GNU toolchain are available for the Blackfin processor and can be downloaded from the μ Clinux for Blackfin processor website (www.blackfin.uclinux.org), which is the central repository for all Blackfin processor open-source projects. One of the board support packages available is the ADSP-BF537 STAMP μ Clinux kernel board support package (BSP). The BSP is composed of the ADSP-BF537 STAMP development board (including the full complement of memory along with serial and network interfaces), a recent copy of the open-source development tools, μ Clinux kernel, and bootloader. The STAMP board is specifically designed to support the development and porting of open-source μ Clinux applications.

NI LabVIEW™ Embedded Module for ADI Blackfin Processors

The NI LabVIEW Embedded Module for ADI Blackfin processors is a comprehensive graphical development environment for embedded design. This module builds on NI LabVIEW embedded technology, which facilitates dataflow graphical programming for embedded systems and includes hundreds of analysis and signal processing functions, integrated I/O, and an interactive debugging interface. With the NI LabVIEW Embedded Module for ADI Blackfin processors, users can easily access essential VisualDSP++ specific compiler options through LabVIEW, such as the ability to enable cache, optimize linking, and view live front-panel updates via JTAG. To help debug those challenging designs, users can connect the host development PC evaluation hardware or end product using an ADI JTAG emulator. LabVIEW includes a wide array of built-in visualization features including tools for charting and graphing real-time data, and reconfiguring attributes of data presentation, such as colors, font size, and graph types. Furthermore, users can dynamically tune applications at run time through live front panel controls.

Blackfin Processor Development Tools

Blackfin Processor	Hardware	Emulator	VisualDSP++ Development Software	Additional Software Available
ADSP-BF512 ADSP-BF514 ADSP-BF516 ADSP-BF518	ADZS-BF518F-EZBRD Key Features - ADSP-BF518F Blackfin processor - SDRAM - Flash - SPI flash - Audio codec - Power analysis interface - Ethernet PHY - A/D converter - Thumbwheel - UART - RTC battery	ADZS-BF518F-EZLITE

Blackfin Processor Target Applications

ADSP-BF512/ADSP-BF514/ADSP-BF516/ADSP-BF518: Low cost, low power general-purpose parts with enhanced Internet and consumer connectivity.

ADSP-BF523/ADSP-BF525/ADSP-BF527 and ADSP-BF522/ADSP-BF524/ADSP-BF526: Low power processors that balance the combination of high performance, power efficiency, and system integration to enable highly optimized designs.

ADSP-BF531/ADSP-BF532: Low power, general-purpose processors for audio, voice, imaging, biometrics, and industrial applications.

ADSP-BF533: High performance for consumer video, security/surveillance, broadband home gateways, and automotive vision systems.

ADSP-BF534: CAN® connectivity for automotive, industrial, and medical applications.

ADSP-BF535: Optimized for networked Internet appliances, central office/network switches, industrial control, and automation applications.

ADSP-BF536/ADSP-BF537: Embedded network connectivity for video, industrial, biometrics, instrumentation, medical, and consumer appliances.

ADSP-BF538/ADSP-BF538F: Ideally suited for a broad range of industrial, instrumentation, and medical appliance applications.

ADSP-BF542/ADSP-BF544/ADSP-BF547/ADSP-BF548/ADSP-BF549: High performance convergent multimedia processors with a flexible platform for industrial, instrumentation, consumer, communications, and automotive applications.

ADSP-BF561: Symmetric multiprocessor optimized for high performance signal and media processing.

Third-Party Developers

More than 130 third parties provide software, hardware, and consulting services to support Blackfin embedded processors. For more information, visit www.analog.com/processors/collaborative.

Hardware

- Companion chip/chipsets
- Development boards
- Development systems
- Emulators
- Evaluation/starter boards
- Reference designs
- COTS DSP boards
- Daughter cards
- Extender boards

Software and Algorithms

- Speech G.7xx
- Telephony (DTMF, caller ID, etc.)
- Echo cancellation
- Audio (MP3, AAC/AAC+, WMA9, Dolby®, DTS®, etc.)
- Video/imaging (JPEG, MPEG-2/MPEG-4, H.264, H.263, WMV9, etc.)
- Image processing
- Facial/object recognition software
- VoIP suites
- Embedded Web browser
- Voice recognition
- Proprietary algorithms (3D audio effects, etc.)

OS/RTOS

- Green Hills® Software/INTEGRITY®
- Green Hills Software/*ve/OSity*™
- Green Hills Software/*μ-ve/OSity*™
- Express Logic/ThreadX®
- Micriμm μC/OS-II
- Mentor Graphics®/Nucleus

ADI Processor Companion Power Selection Guide

How to Use Selection Guide

Determine peak current requirement for each processor power rail using **Spec** listed to the right. Then choose recommended regulators below that intersect with the • symbol. Using the required voltage for each pin of the processor, select a regulator that has the right V_{OUT} for that pin. The regulator input voltage needs to also be compatible with the source power rail.

									Blackfin Processor	
									Processor Type	16
									I_{PEAK} (A)	0.8
									Spec	EE-229, EE-297, EE-293
									I_{NOM} (A)	0.05
ADI Power Regulator										
Part Number	Regulator Type	V_{IN} Max (V)	V_{IN} Min (V)	V_{BIAS} Min (V)	I_{OUT} (A)	V_{OUT} Max (V)	V_{OUT} Min (V)	Operating Control		
ADP1621	SW controller boost	5.5	1.0	2.9	—	—	—	EN SK		
ADP1821	SW controller	5.5	3.7	3	20.0	—	0.6	EN		
ADP1823	2× SW controller	20.0	3.7	3.4	20.0	—	1.6	EN SS TK		
ADP1828	SW controller	24.0	1.0	3	20.0	—	0.6	EN SS TK PG		
ADP1829	2× SW controller	24.0	1.0	3	20.0	—	0.6	EN SS		
ADP1864	SW controller	14.0	3.2	3.2	5.0	—	0.8			•
ADP2102	SW regulator	5.5	2.7		0.6	3.3	0.8	EN		•
ADP2105	SW regulator	5.5	2.7		1.0	5.5	0.8	EN SS		•
ADP2106	SW regulator	5.5	2.7		1.5	5.5	0.8	EN SS		•
ADP2107	SW regulator	5.5	2.7		2.0	5.5	0.8	EN SS		
ADP3050	SW regulator	30.0	3.6		1.5	12	1.25	EN		•
ADP120	LDO	5.5	2.3		0.10	3.3	1.2	EN		•
ADP121	LDO	5.5	2.3		0.15	3.3	1.2	EN		•
ADP130	LDO with bias pin	3.6	1.2	2.3	0.35	3.0	0.8	EN		•
ADP1708	LDO	5.5	2.5		1.00	5.0	0.75	EN SS		•
ADP1710	LDO	5.5	2.5		0.15	5.0	0.75	EN		
ADP1712	LDO	5.5	2.5		0.30	5.0	0.75	EN		•
ADP1715	LDO	5.5	2.5		0.50	5.0	0.75	EN		•
ADP1741 ¹	LDO	3.6	1.6		2.00	3.0	0.8	EN PG SS		•
ADP3339	LDO	6.0	2.8		1.50	5.0	1.5			•
ADP1720	LDO	28.0	4.0		0.05	5.0	1.23	EN		•

¹Indicates UnRel parts. ADI regulators and LDOs are also available in fixed-output voltage options, further reducing external component count.

Operating control features: SS = soft start; EN = enable; PG = power good; TK = tracking; SK = sync.

SW controllers require a separate V_{CC} supply from the power V_{IN} rail.

Refer to ADIsim for a complete set of design tools to create a complete BOM for all of these regulators.
