

Low-Power AppleTalk Interface Transceiver

MAX216

General Description

The MAX216 transceiver is designed specifically for communicating with AppleTalk™ interfaces. The MAX216 has one differential and one single-ended driver, plus one differential and two single-ended receivers, all of which meet the AppleTalk transceiver specifications.

The single-ended and differential drivers have a ±5V output voltage range when they are active, and have thermal shutdown protection against short circuits. The drivers remain in a high-impedance state when disabled or shut down.

One single-ended receiver is configured as an inverter, and the other is configured as a buffer. The input thresholds of the single-ended receivers are TTL-compatible, but the input voltages can vary between ±7V. The input thresholds of the differential receiver are ±200mV, and have a common-mode range of ±7V.

The MAX216 uses only 3mA max when fully operational. The drivers and receivers are disabled during shutdown mode, when the quiescent current is reduced to only 30µA.

Features

- ◆ Differential Driver/Receiver Compatible with RS-422
- ◆ Single-Ended Driver/Receiver Compatible with EIA/TIA-562 and EIA/TIA-232E
- ◆ Low, 3mA Max Operational Supply Current
- ◆ Low, 30µA Shutdown-Mode Supply Current

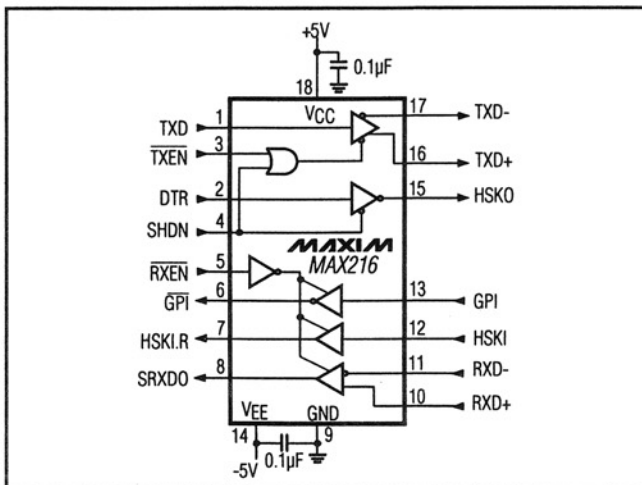

Ordering Information

| PART | TEMP. RANGE | PIN-PACKAGE |
|-----------|--------------|-------------|
| MAX216CWN | 0°C to +70°C | 18 Wide SO |

Applications

- AppleTalk Interfaces
- Apple Printer Interfaces
- Apple Peripheral Interface
- EIA/TIA-232/562 to RS-422 Conversion

Typical Operating Circuit

™AppleTalk is a trademark of Apple Computer, Inc.

Pin Configuration

Low-Power AppleTalk Interface Transceiver

ABSOLUTE MAXIMUM RATINGS

| | | | |
|-----------------------------|------------------------------|--|---------------------------------|
| V_{CC} | +7V | Short-Circuit Duration | |
| V_{EE} | -7V | Driver Outputs (to V_{CC} or V_{EE})..... | Continuous |
| Input Voltages | | Receiver Outputs (to V_{CC} or GND)..... | Continuous |
| Driver Inputs..... | -0.5V to ($V_{CC} + 0.5V$) | Continuous Power Dissipation ($T_A = +70^\circ C$) | |
| Receiver Inputs..... | $\pm 15V$ | SO (derate 9.52mW/ $^\circ C$ above $+70^\circ C$)..... | 762mW |
| Control Input Voltages..... | -0.5V to ($V_{CC} + 0.5V$) | Operating Temperature Range..... | $0^\circ C$ to $+70^\circ C$ |
| Output Voltages | | Storage Temperature Range..... | $-65^\circ C$ to $+160^\circ C$ |
| Driver Outputs..... | $\pm 15V$ | Lead Temperature (soldering, 10sec)..... | $+300^\circ C$ |
| Receiver Outputs..... | -0.5V to ($V_{CC} + 0.5V$) | | |

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS – DC PARAMETERS

($V_{CC} = 5V \pm 5\%$, $V_{EE} = -5V \pm 5\%$, $T_A = T_{MIN}$ to T_{MAX} , unless otherwise noted. See Figures 1 and 5.)

| PARAMETER | SYMBOL | CONDITIONS | MIN | TYP | MAX | UNITS |
|--|------------------|---|-----|-----|-----------|---------|
| POWER SUPPLY | | | | | | |
| Positive Supply Current | I_{CC} | No load, SHDN = 0V | | 1.2 | 3 | mA |
| | | No load, SHDN = V_{CC} | | 30 | 100 | μA |
| Negative Supply Current | I_{EE} | No load | | | 100 | μA |
| DIFFERENTIAL DRIVER | | | | | | |
| TTL/CMOS Input Levels | V_{IL} | TXD, \overline{TXEN} , SHDN | | | 0.8 | V |
| | V_{IH} | | 2.0 | | | |
| Input Current | | TXD, \overline{TXEN} , SHDN | | | ± 20 | μA |
| Differential Driver Output Voltage | V_{OD1} | No load, $I_O = 0A$, V_{D1} | 8.0 | | | V |
| | V_{OD2} | $R = 50\Omega$, V_{D2} | 2.0 | | | |
| Change in Magnitude of Differential Output Voltage | ΔV_{OD2} | $R = 50\Omega$, V_{D2} | | | 0.2 | V |
| Common-Mode Output Voltage | V_{OC} | $R = 50\Omega$, V_{D2} | | | 3 | V |
| Change in Magnitude of Common-Mode Output Voltage | ΔV_{OC} | $R = 50\Omega$, V_{D2} | | | 0.2 | V |
| Output Common-Mode Range | V_{CMR} | SHDN > 2.0V or power off | | | ± 10 | V |
| Short-Circuit Current | | $-5V \leq V_O \leq 5V$ | 35 | | 450 | mA |
| Off-State Output Current | | SHDN > 2.0V or power off, $-10V < V_O < 10V$ | | | ± 100 | μA |

Low-Power AppleTalk Interface Transceiver

Pin Description

| PIN | NAME | FUNCTION |
|-----|--------------------------|---|
| 1 | TXD | TTL-compatible differential driver input |
| 2 | DTR | TTL-compatible single-ended inverting driver input |
| 3 | TXEN | TTL-compatible differential driver output enable. A high input forces the differential driver output into a high-impedance state. A low input enables the differential driver output. This input does not affect the single-ended driver. |
| 4 | SHDN | TTL-compatible shutdown input. A high input forces the chip into shutdown, with both driver outputs forced into three-state and the supply current reduced to 20 μ A typ. The receivers are not functional, but their outputs remain enabled unless $\overline{\text{RXEN}}$ is pulled high. A low input forces the chip into normal operation. |
| 5 | $\overline{\text{RXEN}}$ | TTL-compatible receiver enable input. A low input enables the outputs of the receivers and a high input forces the receiver outputs into a high-impedance state. To prevent unwanted noise at the output of the receivers in shutdown mode, $\overline{\text{RXEN}}$ should be pulled high along with SHDN. |
| 6 | GPI | Inverting single-ended receiver output |
| 7 | HSKI.R | Noninverting single-ended receiver output |
| 8 | SRXDO | Differential receiver output |
| 9 | GND | Ground |
| 10 | RXD+ | Noninverting input to the differential receiver. If RXD+ is greater than RXD- by more than 200mV, then the differential receiver output, SRXDO, will be high. If RXD+ is less than RXD- by more than 200mV, SRXDO will be low – meets RS-422 thresholds. |
| 11 | RXD- | Inverting input to the differential receiver – meets RS-422 thresholds. |
| 12 | HSKI | Noninverting receiver input – meets EIA/TIA-562 and EIA/TIA-232E thresholds. |
| 13 | GPI | Inverting receiver input – meets EIA/TIA-562 and EIA/TIA-232E thresholds. |
| 14 | V_{EE} | Negative supply |
| 15 | HSKO | Single-ended inverting driver output – meets EIA/TIA-562 and EIA/TIA-232E voltage levels. |
| 16 | TXD+ | Noninverting differential driver output – meets RS-422 voltage levels. |
| 17 | TXD- | Inverting differential driver output – meets RS-422 voltage levels. |
| 18 | V_{CC} | Positive supply |
