

# ISL85003DEMO1Z, ISL85003ADEMO1Z Evaluation Board User Guide

## Description

The ISL85003 and ISL85003A Demo kits are intended for use for point-of-load applications sourcing from 4.5V to 18V. The kits are used to demonstrate the performance of the ISL85003 and ISL85003A, high efficiency synchronous buck regulators. The ISL85003 and ISL85003A are offered in a 4x3mm dual flat no lead (DFN) package.

## Recommended Equipment

The following materials are recommended to perform testing:

- 0V to 25V power supply with at least 10A source current capability
- Electronic loads capable of sinking current up to 7A
- Digital Multimeters (DMMs)
- 100MHz quad-trace oscilloscope

## Key Features

- Input voltage range 4.5V to 18V
- Current mode control
  - DCM/PWM
  - Internal or external compensation options
  - 500kHz switching frequency option
  - External synchronization up to 2MHz on ISL85003
- Adjustable soft-start time on the ISL85003A
- Continuous output current up to 3A
- Minimal external components required

## Ordering Information

PART NUMBER	DESCRIPTION
ISL85003DEMO1Z	Small form factor Demo board for 3A, 4.5V to 18V Switching Regulator, external synchronization.
ISL85003ADEMO1Z	Small form factor Demo board for 3A, 4.5V to 18V Switching Regulator, adjustable soft-start time

## Quick Setup Guide

1. Ensure that the circuit is correctly connected to the supply and loads prior to applying any power.
2. Connect the bias supply to VIN, the plus terminal to VIN and the negative return to PGND.
3. Turn on the power supply.
4. Verify the output voltage is 5V for V<sub>OUT</sub>.

## Evaluating the Other Output Voltage

The ISL85003DEMO1Z kit output is preset to 5V; however, output voltages are programmed using an external resistor divider that scales the feedback relative to the internal reference voltage. Please refer to the application note [AN1930](#) and the [ISL85003, ISL85003A](#) datasheet for further information.

## Disabling/Enabling Function

The ISL85003DEMO1Z board has EN pin tied to VIN via R<sub>7</sub>. This keeps the part enabled all the time. To disable the part, remove R<sub>7</sub>.

## MODE/SS Control

The ISL85003 evaluation board has a MODE pin that allows different mode operation. Default board configuration has R<sub>6</sub> = 200k to V<sub>CC</sub>, which defaults to PWM operation mode. If this pin is tied to GND the IC will operate in CCM mode.

The ISL85003A evaluation board has an SS pin that provides a programmable soft-start. When the chip is enabled, the regulated 4µA pull-up current source charges a capacitor C<sub>10</sub> connected from SS to ground. Default board configuration has R<sub>6</sub> = 200k to V<sub>CC</sub>, which defaults to internal SS.
