

1:4 Clock Fanout Buffer

Features

- Low-voltage operation
- $V_{DD} = 3.3V$
- 1:4 Fanout
- Single-input configurable for
 - LVDS, LVPECL, or LVTTTL
 - Four differential pairs of LVDS outputs
- Drives 50- or 100-ohm load (selectable)
- Low input capacitance
- 85 ps typical output-to-output skew
- <4 ns typical propagation delay
- Does not exceed Bellcore 802.3 standards
- Operation at $\Rightarrow 350\text{ MHz} - 700\text{ Mbps}$
- Industrial versions available
- Packages available include TSSOP/SOIC

Description

The Cypress CY2 series of network circuits is produced using advanced 0.35-micron CMOS technology, achieving the industry's fastest logic.

The Cypress CY2DL814 fanout buffer features a single LVDS-, LVPECL-, or LVTTTL-compatible input and four LVDS output pairs.

Designed for data-communication clock management applications, the fanout from a single input reduces loading on the input clock.

The CY2DL814 is ideal for both level translations from single ended to LVDS and/or for the distribution of LVDS-based clock signals. The Cypress CY2DL814 has configurable input and output functions. The input can be selectable for LVPECL/LVTTTL or LVDS signals while the output driver's support standard and high drive LVDS. Drive either a 50-ohm or 100-ohm line with a single part number/device.

1	High Drive/Bus/B	100 ohm	V = 2 * V0
		50 ohm	V = V0

Notes:

- Stresses greater than those listed under absolute maximum ratings may cause permanent damage to the device. This is intended to be a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- Multiple Supplies: The voltage on any input or I/O pin cannot exceed the power pin during power-up. Power supply sequencing is NOT required.
