1 Introduction

Thank you for purchasing the EM Adapter BoosterPack.

The adapter board is a simple sandwich board that makes it easy to connect one of the many available RF Evaluation Modules (EM), like the CC1101EM, CC1120EM, CC2500EM, and CC2520EM to a TI MCU LaunchPad development board. The adapter board provides access to all of the pins on the EM connector and is designed to make it easy to re-configure the connections between the EM and LaunchPad (LP) to fit any combination of evaluation modules and LaunchPads.

The adapter board is equipped with a USB connector to make it possible to power the assembly (LaunchPad + adapter + EM, or just the adapter + EM) if the power supply on the LaunchPad is insufficient.

If you like to build your own BoosterPack, please refer to the "Build Your Own BoosterPack" wiki [2].

2 About this Manual

This manual describes the EM Adapter BoosterPack hardware.

3 Acronyms and Definitions

BP	BoosterPack
CS	Chip Select
EM	Evaluation Module
LP	LaunchPad
MCU	Micro Controller Unit
MISO	Master Out Slave In
MOSI	Master In Slave Out
RF	Radio Frequency
SCLK	Serial Clock
SoC	System on Chip
SPI	Serial Peripheral Interface
TI	Texas Instruments
USB	Universal Serial bus

4 Hardware Description

Figure 1 - EM Adapter BoosterPack Details

4.1 EM Connectors

The part number of the EM connectors on the adapter board is TFM-110-02-L-D-A from Samtec [7]. They mate with e.g. SFM-110-02-L-D-A, also from Samtec.

4.2 LaunchPad Connectors

The LaunchPad connectors on the adapter board are SSQ-110-23-L-D from Samtec.

Dual-row headers/sockets are used to allow full pass-through of all signals from an XL type LaunchPad, e.g. the Tiva TM4C LaunchPad [4], to an appropriate BoosterPack [6] stacked on top of the EM Adapter BoosterPack.

At the time of writing this document, the EM Adapter BoosterPack is compatible with the following LaunchPads:

- MSP430 ValueLine LaunchPad [3]
- Tiva TM4C LaunchPad [4]
- C2000 Piccolo LaunchPad [5]

4.3 LaunchPad to EM Interconnection

4.3.1 Interconnect Concept

Figure 2 below shows the basic concept of how the signals from the LaunchPad connectors are connected to signals on the EM connectors. All of the pins on the connectors are available on probe headers or pin holes on the board.

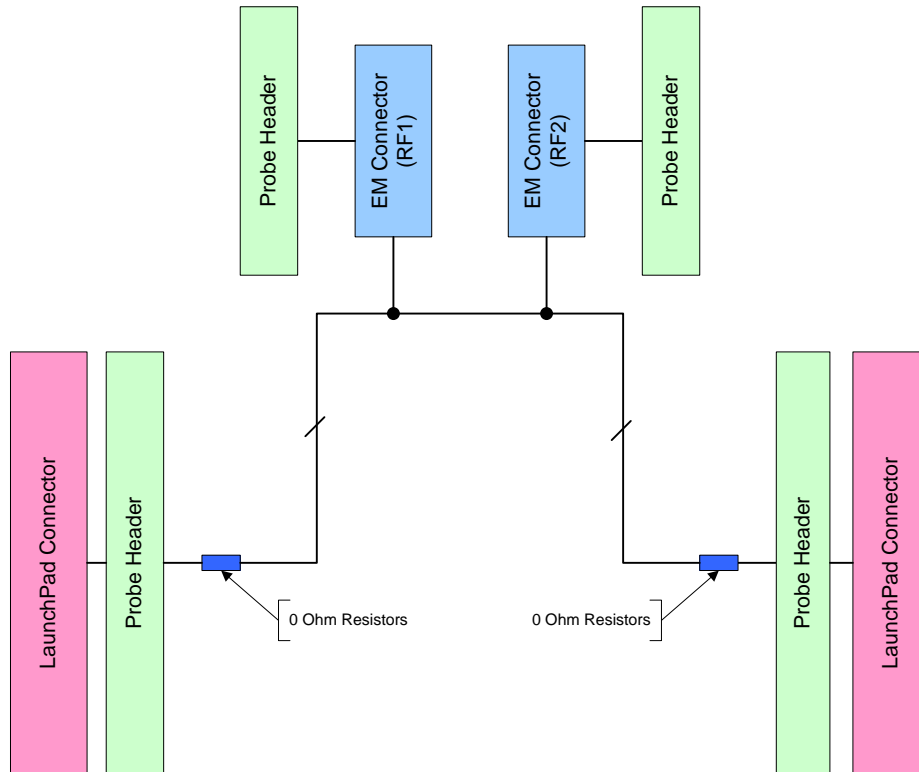

Figure 2 - Interconnect Concept

All signals between the LP and EM connectors are interconnected with a 0-Ohm resistor. By removing the resistor, the signal path is broken and it is easy to wire strap between the various probe pins to adjust the interconnection to fit any EM and LP pin-out. Figure 3 illustrates the concept.

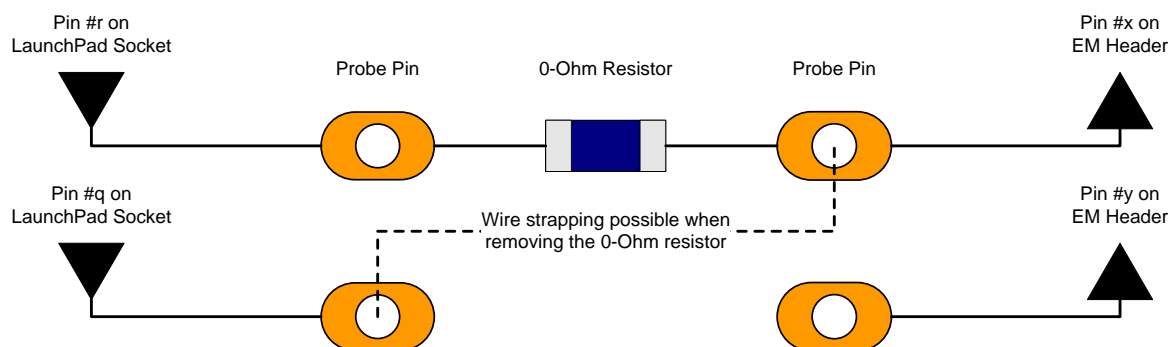

Figure 3 - Re-wiring Concept

4.3.2 Detailed Pin-out

The tables below show the pin-out from the EM connectors and LP connectors and how these signals are connected together.

EM Connector 1 (RF1)			
Signal name	Pin	Pin	Signal name
GND	1	2	-
GPIO4	3	4	-
OSC32k	5	6	-
RX	7	8	-
TX	9	10	GPIO0 (A)
-	11	12	GPIO2 (B)
-	13	14	SPI CS
-	15	16	SPI SCLK
-	17	18	SPI MOSI
GND	19	20	SPI MISO

EM Connector 2 (RF2)			
Signal name	Pin	Pin	Signal name
-	1	2	GND
-	3	4	-
-	5	6	-
VDD	7	8	-
VDD	9	10	-
-	11	12	-
-	13	14	-
RESET	15	16	-
-	17	18	GPIO3
GPIO5	19	20	GND

LaunchPad (LP1)	Adapter Board	
	Signal name	EM Header
LP1.1	VDD	VDD
LP1.2	GPIOB (2)	RF1.12
LP1.3	GPIO (TX)	RF1.09
LP1.4	GPIO (RX)	RF1.07
LP1.5	-	-
LP1.6	-	-
LP1.7	SPI SCLK	RF1.16
LP1.8	-	-
LP1.9	-	-
LP1.10	GPIO5	RF2.19

LaunchPad (LP2)	Adapter Board	
	Signal name	EM Header
LP2.1	GND	GND
LP2.2	GPIOA (0)	RF1.10
LP2.3	SPI CS	RF1.14
LP2.4	-	-
LP2.5	-	-
LP2.6	SPI MOSI	RF1.18
LP2.7	SPI MISO	RF1.20
LP2.8	RESET	RF2.15
LP2.9	GPIO4	RF1.03
LP2.10	GPIO3	RF2.18

4.4 Powering the Adapter Board

Use the power select jumper, P4, to switch between power sources for the evaluation module. Figure 4 shows an overview of how the various power sources are connected to the power jumper.

Figure 4 - Power Select Jumper Detailed Overview

The default option is to power the adapter board, and thus the evaluation module (EM), directly from the LaunchPad (LP). In this case, the jumper should short-circuit pin 1 and 2. See Figure 5 below (the default option on the left).

Figure 5 - Power Select Jumper

The board is equipped with a USB connector and a voltage regulator to make it possible to supply power from USB. Any USB power source can be used, with a maximum voltage of 5.5V. This voltage source can be used if the LaunchPad is unable to supply sufficient current (for example for the CC3000 WiFi evaluation modules). Note that the USB connector can **ONLY** be used as a power source. The USB data lines are not connected.

To power the assembly from USB, the jumper on header P4 must be rotated 90 degrees so that pin 2 is connected to pin 4. See Figure 5, alternative 1. The on-board buck/boost regulator will set the voltage to 3.3V.

As an alternative to USB, you can connect an external power source to the board using the pin holes for connector P3 (on the right hand side of the board). The voltage source shall be in the range from 1.8V to 5.5V. The power select jumper on P4 should in this case be in the same position as when a USB cable is connected.

Avoid connecting both a USB cable and an external power source to the adapter board at the same time.

By connecting an additional jumper on P4, short-circuiting pin 1-3, you can use the USB supply to both power the EM and the LaunchPad, as shown in Figure 5, alternative 2. In this case, remove any other power source from the LaunchPad.

You can also bypass the on-board regulator altogether by connecting an external power source directly to pin 2 on P4. In this case, the voltage supplied by the power source shall be within the maximum and minimum operating voltage limits of the evaluation module connected to the adapter board. **To avoid signal level conflicts, make sure the voltage supplied to the EM is similar to the voltage on the LP.**

4.5 Measuring the Current Consumption

By connecting an ammeter between the power source pin (pin 1 or 3) on the power select header P4 and the power sink pin (pin 2 on the same header), you can easily measure the current consumed by the connected EM board.

4.6 GPIO Swap Resistors

In order to support existing software for the various EM boards available, the Adapter Board allows simple swapping on the signals from EM connector 1 to pins on the LaunchPad connector.

Figure 6 - GPIO Swap Resistors

In the default position, the signal GPIO0 (RF2.10) goes to GPIOA (LP1.2) and GPIO2 (RF2.12) goes to GPIOB (LP2.2). As shown in Figure 7, by rotating the two 0603 0-Ohm resistors R25 and R26, you swap these interconnections, such that GPIO0 is connected to LP2.2 (GPIOB) and GPIO2 is connected to LP1.2 (GPIOA).

Figure 7 - GPIO Swap Resistor Positions

4.7 Optional 32k Oscillator

To support some of the Bluetooth CC256x evaluation modules that require an external clock signal on EM connector pin RF1.5, it is possible to mount a 32.768 kHz crystal oscillator on the adapter board.

Figure 8 - Oscillator Solder Pads

The board is designed to fit a 5x7 mm oscillator from Abracon [8]. This part is easily available from suppliers like Digi-Key and Future Electronics.

EVALUATION BOARD/KIT/MODULE (EVM) ADDITIONAL TERMS

Texas Instruments (TI) provides the enclosed Evaluation Board/Kit/Module (EVM) under the following conditions:

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies TI from all claims arising from the handling or use of the goods.

Should this evaluation board/kit not meet the specifications indicated in the User's Guide, the board/kit may be returned within 30 days from the date of delivery for a full refund. THE FOREGOING LIMITED WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

Please read the User's Guide and, specifically, the Warnings and Restrictions notice in the User's Guide prior to handling the product. This notice contains important safety information about temperatures and voltages. For additional information on TI's environmental and/or safety programs, please visit www.ti.com/esh or contact TI.

No license is granted under any patent right or other intellectual property right of TI covering or relating to any machine, process, or combination in which such TI products or services might be or are used. TI currently deals with a variety of customers for products, and therefore our arrangement with the user is not exclusive. TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein.

REGULATORY COMPLIANCE INFORMATION

As noted in the EVM User's Guide and/or EVM itself, this EVM and/or accompanying hardware may or may not be subject to the Federal Communications Commission (FCC) and Industry Canada (IC) rules.

For EVMs **not** subject to the above rules, this evaluation board/kit/module is intended for use for ENGINEERING DEVELOPMENT, DEMONSTRATION OR EVALUATION PURPOSES ONLY and is not considered by TI to be a finished end product fit for general consumer use. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC or ICES-003 rules, which are designed to provide reasonable protection against radio frequency interference. Operation of the equipment may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

General Statement for EVMs including a radio

User Power/Frequency Use Obligations: This radio is intended for development/professional use only in legally allocated frequency and power limits. Any use of radio frequencies and/or power availability of this EVM and its development application(s) must comply with local laws governing radio spectrum allocation and power limits for this evaluation module. It is the user's sole responsibility to only operate this radio in legally acceptable frequency space and within legally mandated power limitations. Any exceptions to this are strictly prohibited and unauthorized by Texas Instruments unless user has obtained appropriate experimental/development licenses from local regulatory authorities, which is responsibility of user including its acceptable authorization.

For EVMs annotated as FCC – FEDERAL COMMUNICATIONS COMMISSION Part 15 Compliant

Caution

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

FCC Interference Statement for Class A EVM devices

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

FCC Interference Statement for Class B EVM devices

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

For EVMs annotated as IC – INDUSTRY CANADA Compliant

This Class A or B digital apparatus complies with Canadian ICES-003.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Concerning EVMs including radio transmitters

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Concerning EVMs including detachable antennas

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.

This radio transmitter has been approved by Industry Canada to operate with the antenna types listed in the user guide with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Cet appareil numérique de la classe A ou B est conforme à la norme NMB-003 du Canada.

Les changements ou les modifications pas expressément approuvés par la partie responsable de la conformité ont pu vider l'autorité de l'utilisateur pour actionner l'équipement.

Concernant les EVMs avec appareils radio

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Concernant les EVMs avec antennes détachables

Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante.

Le présent émetteur radio a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés dans le manuel d'usage et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

【Important Notice for Users of this Product in Japan】

This development kit is NOT certified as Confirming to Technical Regulations of Radio Law of Japan

If you use this product in Japan, you are required by Radio Law of Japan to follow the instructions below with respect to this product:

1. Use this product in a shielded room or any other test facility as defined in the notification #173 issued by Ministry of Internal Affairs and Communications on March 28, 2006, based on Sub-section 1.1 of Article 6 of the Ministry's Rule for Enforcement of Radio Law of Japan,
2. Use this product only after you obtained the license of Test Radio Station as provided in Radio Law of Japan with respect to this product, or
3. Use of this product only after you obtained the Technical Regulations Conformity Certification as provided in Radio Law of Japan with respect to this product. Also, please do not transfer this product, unless you give the same notice above to the transferee. Please note that if you could not follow the instructions above, you will be subject to penalties of Radio Law of Japan.

EVALUATION BOARD/KIT/MODULE (EVM) WARNINGS, RESTRICTIONS AND DISCLAIMERS

For Feasibility Evaluation Only, in Laboratory/Development Environments. Unless otherwise indicated, this EVM is not a finished electrical equipment and not intended for consumer use. It is intended solely for use for preliminary feasibility evaluation in laboratory/development environments by technically qualified electronics experts who are familiar with the dangers and application risks associated with handling electrical mechanical components, systems and subsystems. It should not be used as all or part of a finished end product.

Your Sole Responsibility and Risk. You acknowledge, represent and agree that:

1. You have unique knowledge concerning Federal, State and local regulatory requirements (including but not limited to Food and Drug Administration regulations, if applicable) which relate to your products and which relate to your use (and/or that of your employees, affiliates, contractors or designees) of the EVM for evaluation, testing and other purposes.
2. You have full and exclusive responsibility to assure the safety and compliance of your products with all such laws and other applicable regulatory requirements, and also to assure the safety of any activities to be conducted by you and/or your employees, affiliates, contractors or designees, using the EVM. Further, you are responsible to assure that any interfaces (electronic and/or mechanical) between the EVM and any human body are designed with suitable isolation and means to safely limit accessible leakage currents to minimize the risk of electrical shock hazard.
3. You will employ reasonable safeguards to ensure that your use of the EVM will not result in any property damage, injury or death, even if the EVM should fail to perform as described or expected.
4. You will take care of proper disposal and recycling of the EVM's electronic components and packing materials.

Certain Instructions. It is important to operate this EVM within TI's recommended specifications and environmental considerations per the user guidelines. Exceeding the specified EVM ratings (including but not limited to input and output voltage, current, power, and environmental ranges) may cause property damage, personal injury or death. If there are questions concerning these ratings please contact a TI field representative prior to connecting interface electronics including input power and intended loads. Any loads applied outside of the specified output range may result in unintended and/or inaccurate operation and/or possible permanent damage to the EVM and/or interface electronics. Please consult the EVM User's Guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative. During normal operation, some circuit components may have case temperatures greater than 60°C as long as the input and output are maintained at a normal ambient operating temperature. These components include but are not limited to linear regulators, switching transistors, pass transistors, and current sense resistors which can be identified using the EVM schematic located in the EVM User's Guide. When placing measurement probes near these devices during normal operation, please be aware that these devices may be very warm to the touch. As with all electronic evaluation tools, only qualified personnel knowledgeable in electronic measurement and diagnostics normally found in development environments should use these EVMs.

Agreement to Defend, Indemnify and Hold Harmless. You agree to defend, indemnify and hold TI, its licensors and their representatives harmless from and against any and all claims, damages, losses, expenses, costs and liabilities (collectively, "Claims") arising out of or in connection with any use of the EVM that is not in accordance with the terms of the agreement. This obligation shall apply whether Claims arise under law of tort or contract or any other legal theory, and even if the EVM fails to perform as described or expected.

Safety-Critical or Life-Critical Applications. If you intend to evaluate the components for possible use in safety critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, such as devices which are classified as FDA Class III or similar classification, then you must specifically notify TI of such intent and enter into a separate Assurance and Indemnity Agreement.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
