Isolated Profibus RS-485 Transceiver with Integrated Transformer Driver

Check for Samples: ISO1176T

FEATURES

- **3000V_{RMS} / 4242V_{PK} Isolation**
- **Meets or Exceeds the Requirements of EN 50170 and TIA/EIA RS-485**
- **Signaling Rates up to 40 Mbps**
- **Easy Isolated Power Design with Integrated Transformer Driver**
- **Typical Efficiency > 60% (I_{LOAD} = 100 mA) - see sluu471**
- **Differential Output exceeds 2.1V (54Ω Load)**
- **Low Bus Capacitance 10pF (MAX)**
- **50kV/μs Typical Transient Immunity**
- **UL 1577, IEC 60747-5-2 (VDE 0884, Rev. 2) Approvals Pending**
- **Fail-safe Receiver for Bus Open, Short, or Idle**

APPLICATIONS

- **Profibus®**
- **Factory Automation**
- **Networked Sensors**
- **Motor/motion Control**
- **HVAC and Building Automation Networks**
- **Networked Security Stations**

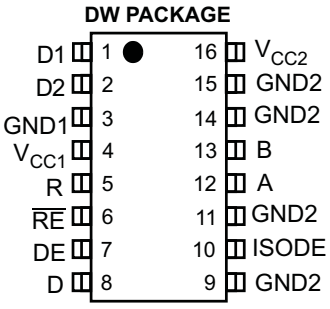
DESCRIPTION

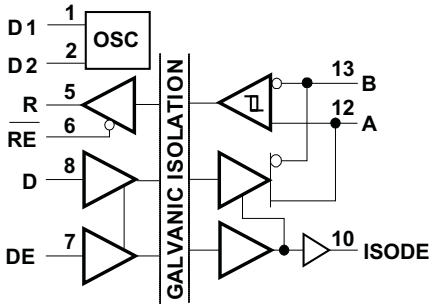
The ISO1176T is an isolated differential line transceiver with integrated oscillator outputs that provide the primary voltage for an isolation transformer. The device is ideal for long transmission lines because the ground loop is broken to allow the device to operate with a much larger common-mode voltage range. The symmetrical isolation barrier of each device is tested to provide 4242V_{PK} of isolation per VDE for 60 seconds between the line transceiver and the logic-level interface.

The galvanically isolated differential bus transceiver is an integrated circuit designed for bi-directional data communication on multipoint bus-transmission lines. The transceiver combines a galvanically isolated differential line driver and differential input line receiver. The driver has an active-high enable with isolated enable-state output on the ISODE pin (pin 10) to facilitate direction control. The driver differential outputs and the receiver differential inputs connect internally to form a differential input/output (I/O) bus port that is designed to offer minimum loading to the bus whenever the driver is disabled or V_{CC2} = 0.

Any cabled I/O can be subjected to electrical noise transients from various sources. These noise transients can cause damage to the transceiver and/or near-by sensitive circuitry if they are of sufficient magnitude and duration. The ISO1176T can significantly reduce the risk of data corruption and damage to expensive control circuits.

The device is characterized for operation over the ambient temperature range of –40°C to 85°C.





Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Profibus is a registered trademark of Profibus International.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

DEVICE INFORMATION

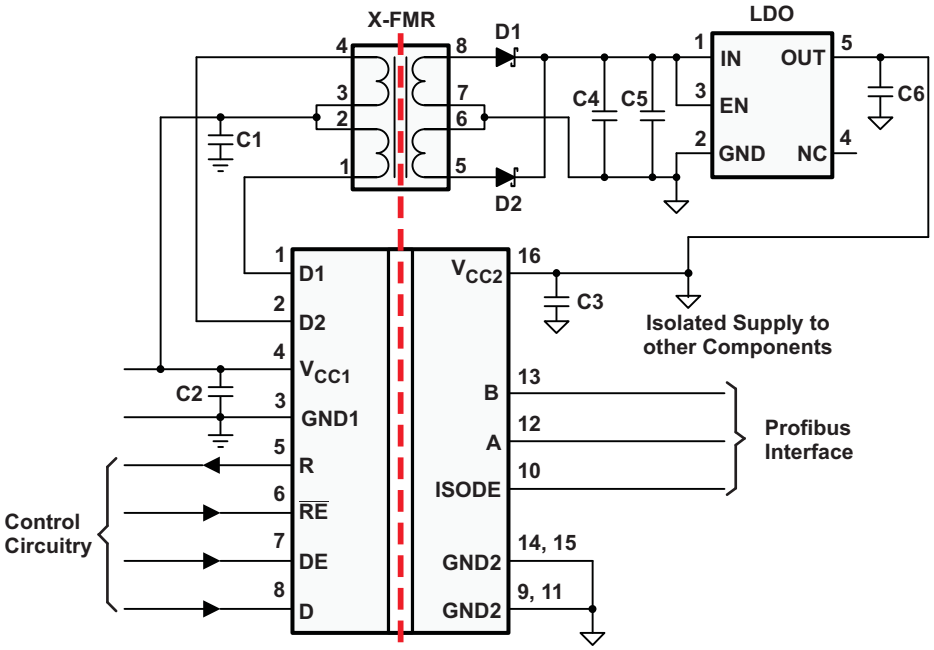


Figure 1. Typical Applications

PIN DESCRIPTIONS

NAME	PIN #	FUNCTION
D1	1	Transformer Driver Terminal 1, Open Drain Output
D2	2	Transformer Driver Terminal 2, Open Drain Output
GND1	3	Logic-side Ground
V_{CC1}	4	Logic-side Power Supply
R	5	Receiver Output
$\overline{RE}$	6	Receiver Enable Input. This pin has complementary logic.
DE	7	Driver Enable Input
D	8	Driver Input
GND2	9, 11, 14, 15	Bus-side Ground. All pins are internally connected.
ISODE	10	Bus-side Driver Enable Output Status
A	12	Non-inverting Driver Output / Receiver Input
B	13	Inverting Driver Output / Receiver Input
VCC2	16	Bus-side Power Supply

ABSOLUTE MAXIMUM RATINGS(1)

					VALUE	UNIT
V_{CC1}, V_{CC2}	Input supply voltage(2)				–0.5 to 7	V
V_O	Voltage at any bus I/O terminal				–9 to 14	V
	Voltage at D1, D2				14	V
V_I	Voltage input at D, DE or $\overline{RE}$ terminal				–0.5 to 7	V
I_O	Receiver output current				±10	mA
I_{D1}, I_{D2}	Transformer Driver Output Current				450	mA
ESD	Electrostatic Discharge	Human Body Model	JEDEC Standard 22, Test Method A114-C.01	Bus pins to GND1	±6	kV
				Bus pins to GND2	±10	
				all pins	±4	
		Charged Device Model	JEDEC Standard 22, Test Method C101	all pins	±1.5	kV
		Machine Model	ANSI/ESDS5.2-1996		±200	V
T_J	Maximum junction temperature				170	°C
T_{STG}	Storage temperature				-65 to 150	°C

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values except differential I/O bus voltages are with respect to the referenced network ground terminal and are peak voltage values.

RECOMMENDED OPERATING CONDITIONS

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
V_{CC}	Logic side supply voltage, V_{CC1} (with respect to GND1)		3		5.5	V
	Bus side supply voltage, V_{CC2} (with respect to GND2)		4.75		5.25	
V_{CM}	Voltage at either bus I/O terminal	A, B	–7		12	V
V_{IH}	High-level input voltage	$\overline{RE}$	2		V_{CC1}	V
		D, DE	0.7 V_{CC1}			
V_{IL}	Low-level input voltage	$\overline{RE}$	0		0.8	V
		D, DE			0.3 V_{CC1}	
V_{ID}	Differential input voltage	A with respect to B	–12		12	V
I_O	Output Current	RS-485 driver	–70		70	mA
		Receiver	–8		8	
T_A	Ambient temperature		-40		85	°C
T_J	Operating junction temperature				150	°C
1 / t_{UI}	Signaling Rate				40	Mbps

SUPPLY CURRENT

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
I_{CC1} (1)	Logic-side quiescent supply current	V_{CC1} = 3.3 V ± 10%, DE, $\overline{RE}$ = 0V or V_{CC1}, No load		4.5	8	mA
		V_{CC1} = 5 V ± 10%, DE, $\overline{RE}$ = 0V or V_{CC1}, No load		7	11	mA
I_{CC2} (1)	Bus-side quiescent supply current	V_{CC2} = 5 V ± 5%, DE, $\overline{RE}$ = 0V or V_{CC1}, No load		13.5	18	mA

(1) I_{CC1} and I_{CC2} are measured when device is connected to external power supplies. D1 and D2 are disconnected from external transformer.

ISODE-PIN ELECTRICAL CHARACTERISTICS

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{OH}	High-level output voltage	I_{OH} = –8mA	V_{CC2} – 0.8	4.6		V
		I_{OH} = –20µA	V_{CC2} – 0.1	5		
V_{OL}	Low-level output voltage	I_{OL} = 8mA		0.2	0.4	V
		I_{OL} = 20µA		0	0.1	

RS-485 DRIVER ELECTRICAL CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
V_{OD}	Open-circuit differential output voltage	$\|V_A - V_B\|$, See Figure 2		1.5		V_{CC2}	V
$\|V_{OD(SS)}\|$	Steady-state differential output voltage magnitude	See Figure 3 and Figure 7		2.1			V
		See Figure 4, Common-mode loading with Vtest from –7V to +12V		2.1			
$\|\Delta V_{OD(SS)}\|$	Change in steady-state differential output voltage between logic states	See Figure 5 and Figure 6, R_L = 54Ω		-0.2		0.2	V
$V_{OC(SS)}$	Steady-state common-mode output voltage	See Figure 5 and Figure 65, R_L = 54Ω		2		3	V
$\Delta V_{OC(SS)}$	Change in steady-state common-mode output voltage			–0.2		0.2	
$V_{OC(pp)}$	Peak-to-peak common-mode output voltage				0.5		
$V_{OD(ring)}$	Differential output voltage over and under shoot	See Figure 7 and Figure 10				10%	$V_{OD(pp)}$
I_I	Input current	D, DE at 0V or V_{CC1}		–10		10	µA
$I_{O(OFF)}$	Power-off output current	V_{CC2} = 0 V		See receiver input current			
I_{OZ}	High-impedance output current	DE at 0V					
$I_{OS(P)}$	Peak short-circuit output current	See Figure 9, DE at V_{CC1}	V_{OS} = –7V to 12V	-250		250	mA
$I_{OS(SS)}$	Steady-state short-circuit output current		V_{OS} = 12V, D at GND1			135	
			V_{OS} = –7V, D at V_{CC1}	–135			
C_{OD}	Differential output capacitance			See receiver C_{IN}			
CMTI	Common-mode transient immunity	See Figure 20		25			kV/µs

RS-485 DRIVER SWITCHING CHARACTERISTICS

over operating free-air temperature range (unless otherwise noted)

PARAMETER			TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PLH}, t_{PHL}	Prop delay time	V_{CC1} = 5V ± 10%, V_{CC2} = 5V ± 5%	See Figure 10		23	35	ns
$t_{sk(p)}$	Pulse skew ($\lvert t_{PHL} - t_{PLH} \rvert$)				2	5	
t_{PLH}, t_{PHL}	Prop delay time	V_{CC1} = 3.3V ± 10%, V_{CC2} = 5V ± 5%			25	40	ns
$t_{sk(p)}$	Pulse skew ($\lvert t_{PHL} - t_{PLH} \rvert$)				2	5	
t_r	Differential output signal rise time			2	3	7.5	ns
t_f	Differential output signal fall time			2	3	7.5	
t_{pDE}	DE to ISODE prop delay		See Figure 14			30	ns
$t_{t(MLH)}$, $t_{t(MHL)}$	Output transition skew		See Figure 11			1	ns
$t_{p(AZH)}$, $t_{p(BZH)}$, $t_{p(AZL)}$, $t_{p(BZL)}$	Propagation delay, high-impedance-to-active output		See Figure 12 and Figure 13, C_L = 50pf, $\overline{RE}$ at 0 V			80	ns
$t_{p(AHZ)}$, $t_{p(BHZ)}$, $t_{p(ALZ)}$, $t_{p(BLZ)}$	Propagation delay, active-to-high-impedance output					80	
$\lvert t_{p(AZL)} - t_{p(BZH)} \rvert$ $\lvert t_{p(AZH)} - t_{p(BZL)} \rvert$	Enable skew time				0.55	1.5	ns
$t_{(CFB)}$	Time from application of short-circuit to current fold back		See Figure 9		0.5		µs
$t_{(TSD)}$	Time from application of short-circuit to thermal shutdown		See Figure 9, T_A = 25°C	100			µs

RECEIVER ELECTRICAL CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER			TEST CONDITIONS		MIN	TYP	MAX	UNIT
$V_{IT(+)}$	Positive-going input threshold voltage		See Figure 16	I_O = –8mA		–80	-10	mV
$V_{IT(–)}$	Negative-going input threshold voltage			I_O = 8mA	–200	–120		
V_{hys}	Hysteresis voltage ($V_{IT+} - V_{IT–}$)					25		
V_{OH}	High-level output voltage	V_{CC1} = 3.3V ± 10% and V_{CC2} = 5V ± 5%	V_{ID} = 200 mV, See Figure 16	I_{OH} = -8mA	V_{CC1} – 0.4	3		V
				I_{OH} = -20µA	V_{CC1} – 0.1	3.3		
V_{OL}	Low-level output voltage		V_{ID} = -200 mV, See Figure 16	I_{OL} = 8mA		0.2	0.4	V
				I_{OL} = 20µA		0	0.1	
V_{OH}	High-level output voltage	V_{CC1} = 5V ± 10% and V_{CC2} = 5V ± 5%	V_{ID} = 200 mV, See Figure 16	I_{OH} = –8mA	V_{CC1} – 0.8	4.6		V
				I_{OH} = –20µA	V_{CC1} – 0.1	5		
V_{OL}	Low-level output voltage		V_{ID} = –200 mV, See Figure 16	I_{OL} = 8mA		0.2	0.4	V
				I_{OL} = 20µA		0	0.1	
I_A, I_B	Bus pin input current		V_I = –7 or 12V, Other input = 0 V	V_{CC2} = 4.75V or 5.25V	–160		200	µA
$I_{A(off)}$, $I_{B(off)}$				V_{CC2} = 0V				
I_I	Receiver enable input current		$\overline{RE}$ = 0 V		–50		50	µA
I_{OZ}	High-impedance state output current		$\overline{RE}$ = V_{CC1}		–1		1	µA
R_{ID}	Differential input resistance		A, B		60			kΩ
C_{ID}	Differential input capacitance		Test input signal is a 1MHz sine wave with 1Vpp amplitude. CD is measured across A and B.			7	10	pF
CMR	Common mode rejection		See Figure 19			4		V

RECEIVER SWITCHING CHARACTERISTICS

IEC INSULATION AND SAFETY RELATED SPECIFICATIONS FOR 16-DW PACKAGE

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
L(I01)	Minimum air gap (Clearance)(1)	Shortest terminal to terminal distance through air	8.3			mm
L(I02)	Minimum external tracking (Creepage)(1)	Shortest terminal to terminal distance across the package surface	8.1			mm
CTI	Tracking resistance (Comparative Tracking Index)	DIN IEC 60112 / VDE 0303 Part 1	400			V
	Minimum Internal Gap (Internal Clearance)	Distance through the insulation	0.008			mm
R_{IO}	Isolation resistance	Input to output, V_{IO} = 500 V, all pins on each side of the barrier tied together creating a two-terminal device		$>10^{12}$		Ω
C_{IO}	Barrier capacitance Input to output	$V_I = V_{CC}/2 + 0.4$ sin (2πft), f = 1MHz, V_{CC} = 5 V		2		pF
C_I	Input capacitance to ground	$V_I = 0.4$ sin (2πft), f = 1MHz		2		pF
P_D	Maximum device power dissipation	V_{CC1} = 5.5V, V_{CC2} = 5.25V, T_J = 150°C, C_L = 50pf, R_L = 54Ω Input a 20MHz 50% duty cycle square wave			719	mW

(1) Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to make sure that the mounting pads of the isolator on the printed circuit board do not reduce this distance.

Creepage and clearance on a printed circuit board become equal according to the measurement techniques shown in the Isolation Glossary. Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications

IEC SAFETY LIMITING VALUES

Safety limiting intends to prevent potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the IO can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier potentially leading to secondary system failures.

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
I_S	Safety input, output, or supply current	DW-16	θ_{JA} = 76°C/W, V_I = 5.5 V, T_J = 170°C, T_A = 25°C			347	mA
T_S	Maximum case temperature	DW-16				150	°C

The safety-limiting constraint is the absolute maximum junction temperature specified in the absolute maximum ratings table. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the Thermal Characteristics table is that of a device installed on a High-K Test Board for Leaded Surface Mount Packages. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

THERMAL INFORMATION

THERMAL METRIC (1)		ISO1176T	UNITS
		DW-16	
θ_{JA}	Junction-to-ambient thermal resistance	76	°C/W

APPLICATION INFORMATION

REFERENCE DESIGN

ISO1176T Reference Design (SLUU471) is available to provide complete isolated data and power solution.

TRANSIENT VOLTAGES

Isolation of a circuit insulates it from other circuits and earth so that noise develops across the insulation rather than circuit components. The most common noise threat to data-line circuits is voltage surges or electrical fast transients that occur after installation and the transient ratings of ISO1176T are sufficient for all but the most severe installations. However, some equipment manufacturers use their ESD generators to test transient susceptibility of their equipment and can exceed insulation ratings. ESD generators simulate static discharges that may occur during device or equipment handling with low-energy but high voltage transients.

Figure 31 models the ISO1176T bus IO connected to a noise generator. C_{IN} and R_{IN} is the device and any other stray or added capacitance or resistance across the A or B pin to GND2, C_{ISO} and R_{ISO} is the capacitance and resistance between GND1 and GND2 of ISO1176T plus those of any other insulation (transformer, etc.), and we assume stray inductance negligible. From this model, the voltage at the isolated bus return is $v_{GND2} = v_N \frac{Z_{ISO}}{Z_{ISO} + Z_{IN}}$ and will always be less than 16 V from V_N. If ISO1176T is tested as a stand-alone device, $R_{IN} = 6 \times 10^4 \Omega$, $C_{IN} = 16 \times 10^{-12}$ F, $R_{ISO} = 10^9 \Omega$ and $C_{ISO} = 10^{-12}$ F.

Note from Figure 31 that the resistor ratio determines the voltage ratio at low frequency and it is the inverse capacitance ratio at high frequency. In the stand-alone case and for low frequency,

$$\frac{v_{GND2}}{v_N} = \frac{R_{ISO}}{R_{ISO} + R_{IN}} = \frac{10^9}{10^9 + 6 \times 10^4}$$

or essentially all of noise appears across the barrier. At high frequency,

$$\frac{v_{GND2}}{v_N} = \frac{\frac{1}{C_{ISO}}}{\frac{1}{C_{ISO}} + \frac{1}{C_{IN}}} = \frac{1}{1 + \frac{C_{ISO}}{C_{IN}}} = \frac{1}{1 + \frac{1}{16}} = 0.94$$

and 94% of V_N appears across the barrier. As long as R_{ISO} is greater than R_{IN} and C_{ISO} is less than C_{IN}, most of transient noise appears across the isolation barrier, as it should.

We recommend the reader not test equipment transient susceptibility with ESD generators or consider product claims of ESD ratings above the barrier transient ratings of an isolated interface. ESD is best managed through recessing or covering connector pins in a conductive connector shell and installer training.

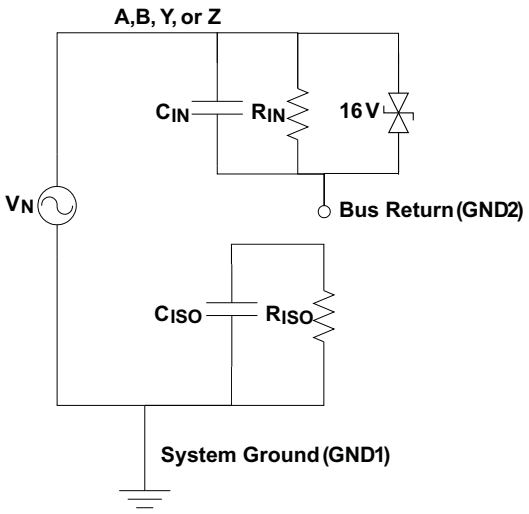

Figure 31. Noise Model

REVISION HISTORY

Changes from Revision initial (October 2010) to Revision A **Page**

- Updated transformer driver characteristics 6
- Added Thermal Table data 14

Changes from Revision A (December 2010) to Revision B **Page**

- Changed the Steady-state short-circuit output current - Test Conditions and values. 4
- Changed the Oscillator frequency values 6
- Changed the D1, D2 output rise time values 6

Changes from Revision B (December 2010) to Revision C **Page**

- Added a Typ value of 23ns to Prop delay time for V_{CC1} = 5V in the RS-485 DRIVER SWITCHING CHARACTERISTIC table 5
- Added a Typ value of 25ns to Prop delay time for V_{CC1} = 3.3V in the RS-485 DRIVER SWITCHING CHARACTERISTIC table 5
- Deleted R_{OFF} from the TRANSFORMER DRIVER CHARACTERISTICS table 6
- Changed θ_{JA} = 212°C/W To: θ_{JA} = 76°C/W, Changed the I_S Max value From: 128mA To: 347mA, and changed paragraph two in the IEC SAFETY LIMITING VALUES section 14
- Changed Figure 22 15

Changes from Revision C (February 2011) to Revision D **Page**

- Added Figure 1 2
- Moved the Pin Description closer to the Pin drawing 2

Changes from Revision D (May 2011) to Revision E **Page**

- Deleted the MIN and MAX values for t_{r_D}, t_{f_D} and t_{BBM} specifications in the Transformer Driver Characteristics table. 6
- Changed test conditions from 1.9 V to 2.4 V, and changed TYP value from 230 to 350 for f_{St} specification in the Transformer Driver Characteristics table. 6

Changes from Revision E (August 2011) to Revision F **Page**

- Changed From "ISO1176T Reference Design SLLU471" To: "ISO1176T Reference Design SLUU471" 20

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)	Op Temp (°C)	Top-Side Markings (4)	Samples
ISO1176TDW	ACTIVE	SOIC	DW	16	40	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 85	ISO1176T	Samples
ISO1176TDWR	ACTIVE	SOIC	DW	16	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 85	ISO1176T	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

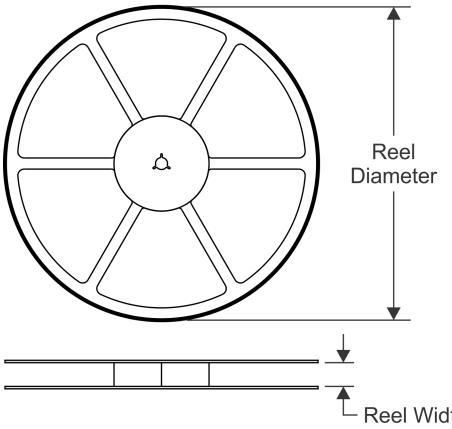
(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

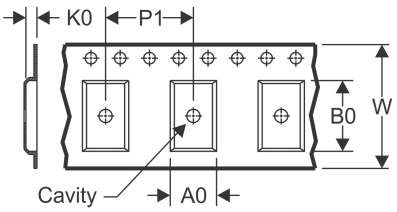
(4) Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

TAPE AND REEL INFORMATION

REEL DIMENSIONS

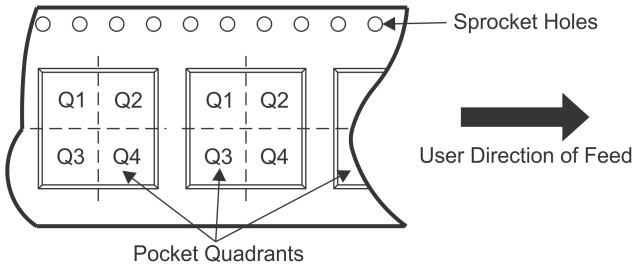


TAPE DIMENSIONS



A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

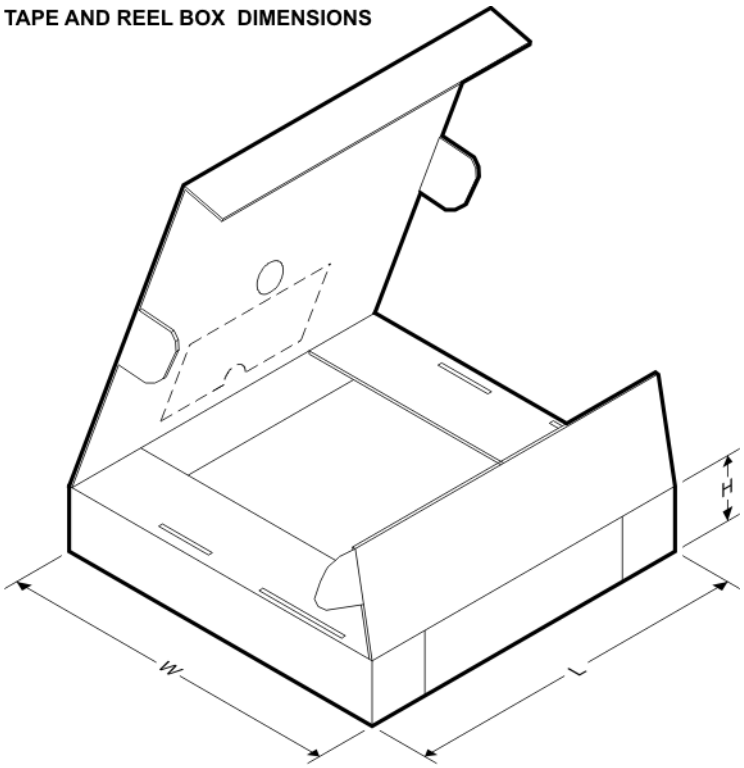
QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE



*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
ISO1176TDWR	SOIC	DW	16	2000	330.0	16.4	10.75	10.7	2.7	12.0	16.0	Q1

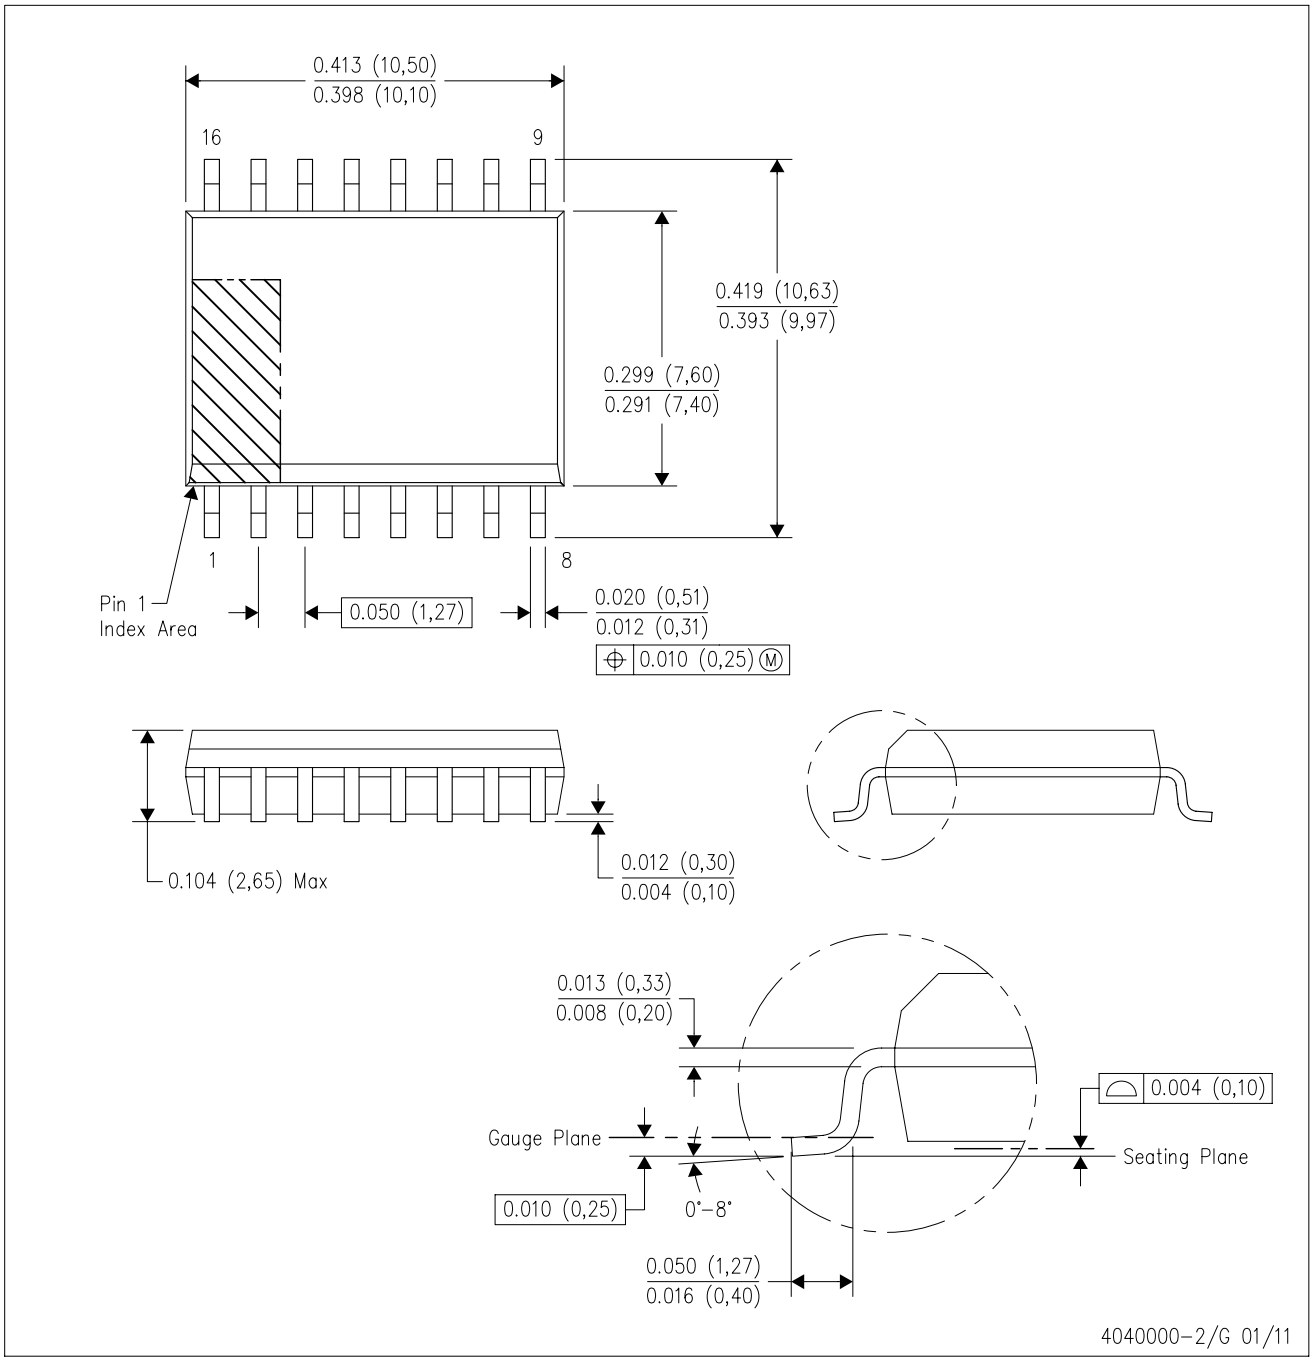
TAPE AND REEL BOX DIMENSIONS



*All dimensions are nominal

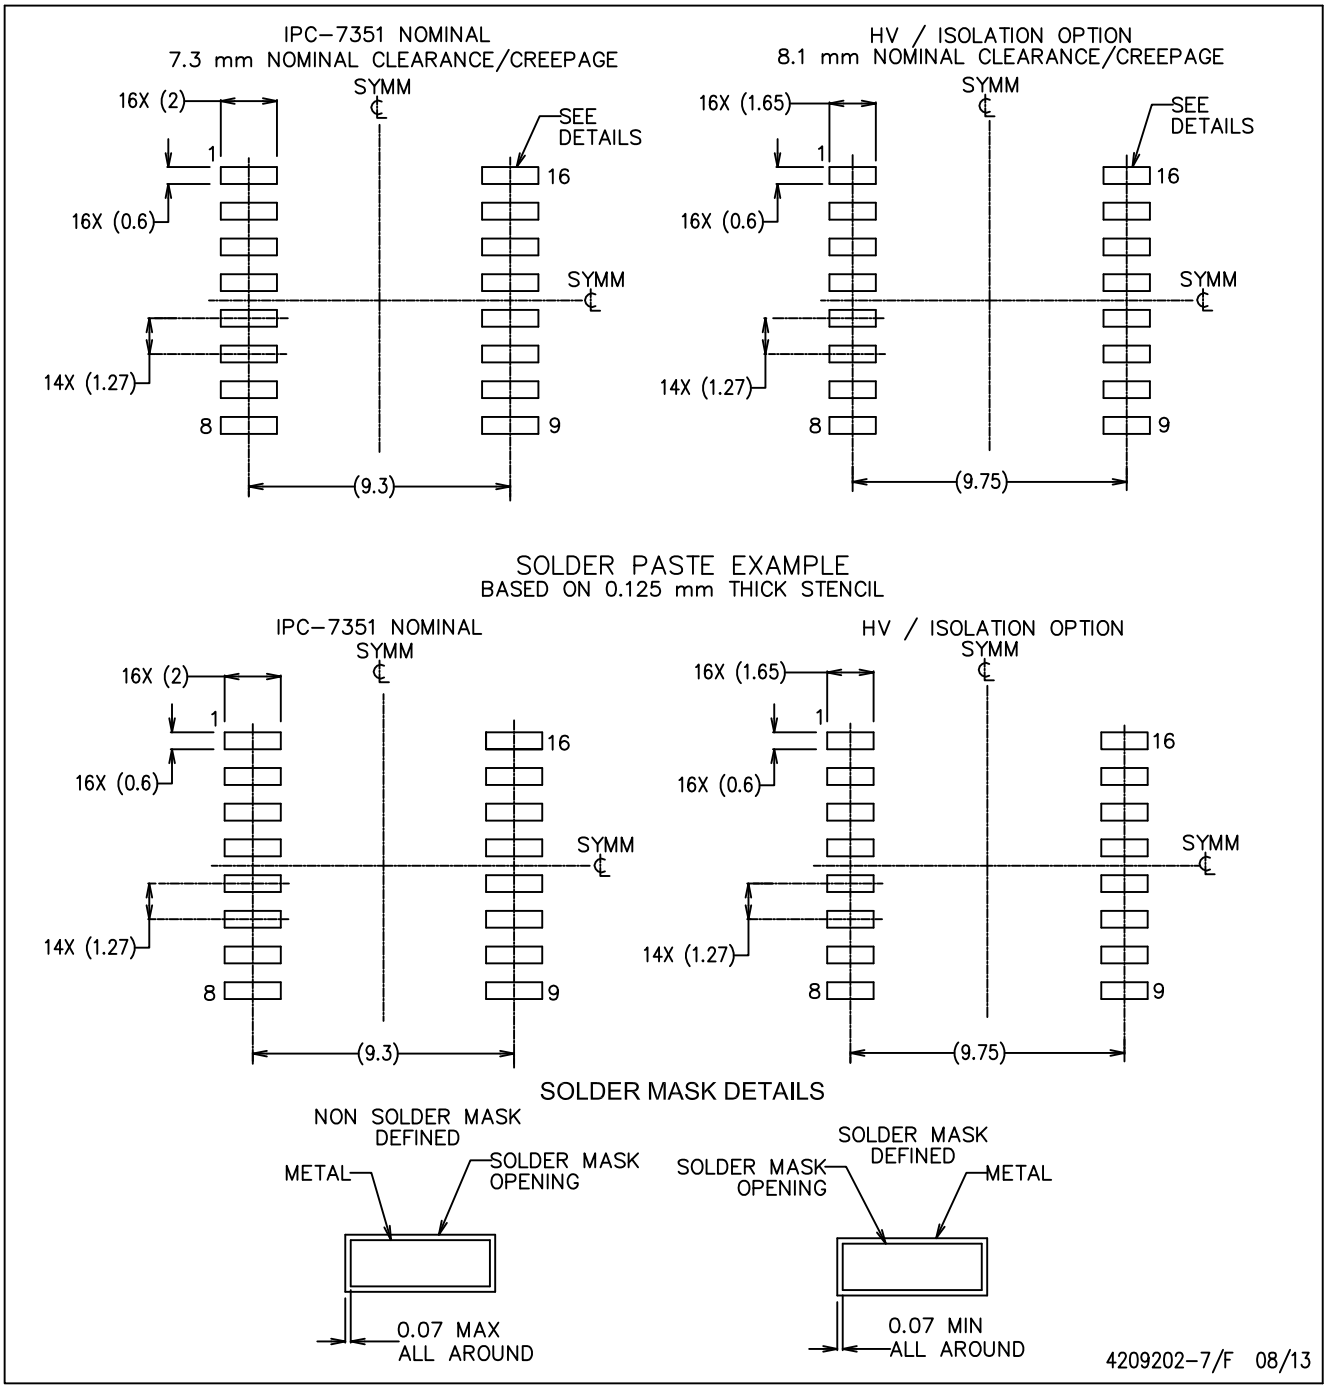
Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
ISO1176TDWR	SOIC	DW	16	2000	367.0	367.0	38.0

DW (R–PDSO–G16) PLASTIC SMALL OUTLINE



NOTES:
A. All linear dimensions are in inches (millimeters). Dimensioning and tolerancing per ASME Y14.5M–1994.
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15).
D. Falls within JEDEC MS–013 variation AA.

DW (R-PDSO-G16) PLASTIC SMALL OUTLINE



NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Refer to IPC7351 for alternate board design.
D. Solder mask tolerances between and around signal pads can vary based on board fabrication site.
E. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
F. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
