1   Introduction

This user's guide contains background information for the

AN30182A : Multi Power Supply (High Efficiency Power LSI)

as well as support documentation for the AN30182A Evaluation Board (AN30182A-EVB). Also included are the schematic, the bill of materials and the Board Layout for the Evaluation Board.

1.1   Overview

AN30182A is a multi power supply LSI which has high-speed response DC-DC Step Down Regulators (2-ch) and LDO Regulators (6-ch).
The output DC of each power supply is variable by I2C control.

1.2   Features

—DC-DC Step Down Regulator   2-ch   (Output voltage 0.8 V to 2.4 V,   Output current 600 mA)
—Regulator   6-ch   (Output voltage 1.0 V to 3.3 V,   Output current 300 mA)
—I2C control   (2-slave address selectable)
—Input Voltage Range: VBAT: 2.5V~ 5.5V , DVDD: 1.7V ~ 3.0V
—Built-in Under Voltage Lockout (UVLO), Thermal Shut Down (TSD), Output Over-Current
    Protection (OCP), Short-Circuit Protection (SCP) functions

Input voltage and output current range for the evaluation Board are given in Table 1.

Table 1. Input Voltage and Output Current Summary

Evaluation Board	Input Voltage range	Output Current Range
EVB-AN30182A	VBAT = 2.5V 5.5V DVDD = 1.7V 3.0V	DC-DC Step Down Regulator: 0.8 V ~ 2.4 V 600 mA LDO Regulator: 1.0 V ~ 3.3 V 300 mA

1.3   Applications

—Portable appliance, etc

1.4   Package

— 25 pin Wafer Level Chip Size Package (WLCSP)
   (Size : 2.15 mm   2.15 mm, 0.4 mm Pitch)

1.5   Type

—Bi-CMOS IC

Note: The parameters above is subject to change for improvement without notice.

1.6 Simplified Application Circuit

Figure 1. Block Diagram

Notes) • This application circuit is an example. The operation of mass production set is not guaranteed. You should perform enough evaluation and
verification on the design of mass production set. You are fully responsible for the incorporation of the above application circuit and
information in the design of your equipment.

   • This block diagram is for explaining functions. Part of the block diagram may be omitted, or it may be simplified.

2   Evaluation Board

This section describes Structure, Connection and Main Test Points of Evaluation Board.

2.1   Structure

Evaluation Board consists of **AN30182A Evaluation Board** and **USB Microcontroller Board** as figure 2.
IIC connector of AN30182A Evaluation Board is connected to CN1 of USB Microcontroller Board by a cable.

AN30182A Evaluation Board   **USB Microcontroller Board**

1 Only JP1 should be shorted.

Figure 2. Structure of Evaluation Board

2.2   Connection

Evaluation Board should be connected to PC with USB Cable as Figure 3.

PC   USB Cable   Evaluation Board

2.4 Switches and Jumper Setup

ASEL pin, LDO1ON pin and RESET pin are able to be controlled by SW-ASEL, SW-LDO1ON and SW-RESET (Figure 5).

JP8 supplies the voltage for I2C communications to USB Microcontroller Board. Connect the pin1 to the pin2 to be shown in figure 6 for evaluation.

Figure 5. Appearance of SW-ASEL, SW-LDO1ON and SW-RESET

4   Operating Procedure

This section describes how to use Evaluation Board and Serial Controller software.

4.1   Start of Process

Connect Evaluation Board to PC with USB Cable. (cf. section 2.2)

Supply VBAT 2.5 5.5V and DVDD=1.7 3.0V on Evaluation Board.

Before using Evaluation Board, Installation of a program to PC is needed.

 Please refer to the file : Install Manual of Serial Controller(AN30182A).pdf

If this has ever been done, ignore this step.

Start up the Serial Controller software : AN301820_Serial Controller ver1.0a.exe

In the opening window, Choose [NEW TYPE(EXUSB_FX2)I2C Control] button.

Figure 8. Starting Window of Serial Controller Software

Serial Controller Software starts.

4.2 Operating Instructions

Operating Instructions on Operating window of Serial Controller software.

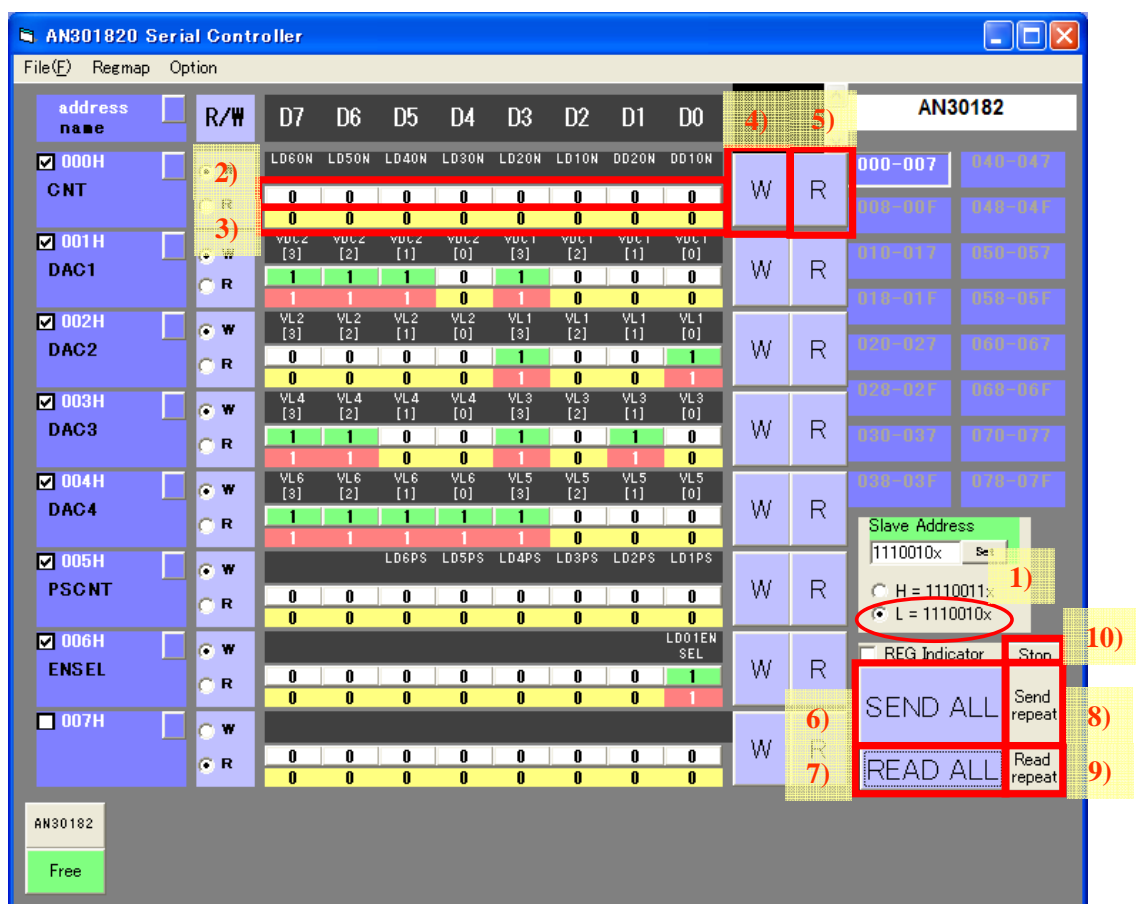

Figure 9. Operating Instructions on Operating Window of Serial Controller Software

Slave Address
Set Slave Address of I2C communication. Choose [L=1110010x]. Choose the same one as the SW_ASEL setting on AN30182A Evaluation Board.

Set Write Data
Click the bit data you want to change, the data will be changed 0→1 or 1→0.

Indicate Read Data
8bit binary data read from AN30182A IC is indicated.

Write Data (1 Address)
Send the write data set at 2)

Read Data (1 Address)
Read 8bit binary data from AN30182A IC and indicate at 3).

) Write Data (All Address)
Send all write data set in the operating window.

Read Data (All Address)
Read all data from AN30182A IC and indicate to the operating window.

Write Data (All Address) Repeatedly
Repeat 6) infinitely.

Read Data (All Address) Repeatedly
Repeat 7) infinitely.

Stop
Stop and .

Note: The parameters above is subject to change for improvement without notice.

IMPORTANT NOTICE

1. When using the IC for new models, verify the safety including the long-term reliability for each product.

2. When the application system is designed by using this IC, please confirm the notes in this book.
   Please read the notes to descriptions and the usage notes in the book.

3. This IC is intended to be used for general electronic equipment.
   Consult our sales staff in advance for information on the following applications: Special applications in which exceptional quality and reliability are required, or if the failure or malfunction of this IC may directly jeopardize life or harm the human body. Any applications other than the standard applications intended.
   (1) Space appliance (such as artificial satellite, and rocket)
   (2) Traffic control equipment (such as for automotive, airplane, train, and ship)
   (3) Medical equipment for life support
   (4) Submarine transponder
   (5) Control equipment for power plant
   (6) Disaster prevention and security device
   (7) Weapon
   (8) Others : Applications of which reliability equivalent to (1) to (7) is required
   Our company shall not be held responsible for any damage incurred as a result of or in connection with the IC being used for any special application, unless our company agrees to the use of such special application.
   However, for the IC which we designate as products for automotive use, it is possible to be used for automotive.

4. This IC is neither designed nor intended for use in automotive applications or environments unless the IC is designated by our company to be used in automotive applications.
   Our company shall not be held responsible for any damage incurred by customers or any third party as a result of or in connection with the IC being used in automotive application, unless our company agrees to such application in this book.

5. Please use this IC in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Our company shall not be held responsible for any damage incurred as a result of our IC being used by our customers, not complying with the applicable laws and regulations.

6. Pay attention to the direction of the IC. When mounting it in the wrong direction onto the PCB (printed-circuit-board), it might be damaged.

7. Pay attention in the PCB (printed-circuit-board) pattern layout in order to prevent damage due to short circuit between pins. In addition, refer to the Pin Description for the pin configuration.

8. Perform visual inspection on the PCB before applying power, otherwise damage might happen due to problems such as solder-bridge between the pins of the IC. Also, perform full technical verification on the assembly quality, because the same damage possibly can happen due to conductive substances, such as solder ball, that adhere to the IC during transportation.

9. Take notice in the use of this IC that it might be damaged when an abnormal state occurs such as output pin-VCC short (Power supply fault), output pin-GND short (Ground fault), or output-to-output-pin short (load short). Safety measures such as installation of fuses are recommended because the extent of the above-mentioned damage will depend on the current capability of the power supply.

10. The protection circuit is for maintaining safety against abnormal operation. Therefore, the protection circuit should not work during normal operation.
    Especially for the thermal protection circuit, if the area of safe operation or the absolute maximum rating is momentarily exceeded due to output pin to VCC short (Power supply fault), or output pin to GND short (Ground fault), the IC might be damaged before the thermal protection circuit could operate.

11. Unless specified in the product specifications, make sure that negative voltage or excessive voltage are not applied to the pins because the IC might be damaged, which could happen due to negative voltage or excessive voltage generated during the ON and OFF timing when the inductive load of a motor coil or actuator coils of optical pick-up is being driven.

12. Product which has specified ASO (Area of Safe Operation) should be operated in ASO

13. Verify the risks which might be caused by the malfunctions of external components.

14. Due to the unshielded structure of this IC, functions and characteristics of the IC cannot be guaranteed under the exposure of light. During normal operation or even under testing condition, please ensure that the IC is not exposed to light.

15. Please ensure that your design does not have metal shield parts touching the chip surface as the surface potential is GND voltage.
