

# TPS2296xC 5.5-V, 3-A, 13-mΩ On-Resistance Load Switch With Reverse Current Protection and Controlled Turn-On

## 1 Features

- Integrated N-Channel Load Switch
- Input Voltage Range: 1 V to 5.5 V
- Internal Pass-FET  $R_{\text{DS(ON)}} = 8 \text{ m}\Omega$  (Typ)
- Ultra-Low ON-Resistance
  - $R_{\text{ON}} = 13 \text{ m}\Omega$  (Typ) at  $V_{\text{IN}} = 5 \text{ V}$
  - $R_{\text{ON}} = 14 \text{ m}\Omega$  (Typ) at  $V_{\text{IN}} = 3.3 \text{ V}$
  - $R_{\text{ON}} = 18 \text{ m}\Omega$  (Typ) at  $V_{\text{IN}} = 1.8 \text{ V}$
- 3A Maximum Continuous Switch Current
- Reverse Current Protection (When Disabled)
- Low Shutdown Current (760 nA)
- Low Threshold 1.3-V GPIO Control Input
- Controlled Slew-Rate to Avoid Inrush Current
- Quick Output Discharge (TPS22964 only)
- Six Terminal Wafer-Chip-Scale Package (Nominal Dimensions Shown - See Addendum for Details)
  - 0.9 mm x 1.4 mm, 0.5 mm Pitch, 0.5 mm Height (YZP)
- ESD Performance Tested Per JESD 22
  - 2-kV Human-Body Model (A114-B, Class II)
  - 500-V Charged-Device Model (C101)

## 2 Applications

- Smartphones
- Notebook Computer and Ultrabook™
- Tablet PC Computer
- Solid State Drives (SSD)
- DTV/IP Set Top Box
- POS Terminals and Media Gateways

## 4 Simplified Schematic

## 3 Description

The TPS22963/64 is a small, ultra-low  $R_{\text{ON}}$  load switch with controlled turn on. The device contains a low  $R_{\text{DS(ON)}}$  N-Channel MOSFET that can operate over an input voltage range of 1 V to 5.5 V and switch currents of up to 3 A. An integrated charge pump biases the NMOS switch in order to achieve a low switch ON-Resistance. The switch is controlled by an on/off input (ON), which is capable of interfacing directly with low-voltage GPIO control signals. The rise time of the TPS22963/64 device is internally controlled in order to avoid inrush current.

The TPS22963/64 provides reverse current protection. When the power switch is disabled, the device will not allow the flow of current towards the input side of the switch. The reverse current protection feature is active only when the device is disabled so as to allow for intentional reverse current (when the switch is enabled) for some applications.

The TPS22963/64 is available in a small, space-saving 6-pin WCSP package and is characterized for operation over the free air temperature range of  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ .

### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPS2296xC	DSBGA (6)	1.40 mm x 0.90 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

## 5 Revision History

### Changes from Original (June 2013) to Revision A

Page

- Added *Pin Configuration and Functions* section, *ESD Ratings* table, *Feature Description* section, *Device Functional Modes*, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section ..... 1

## 6 Device Comparison Table

	$R_{ON}$ (Typ) at 3.3 V	Rise Time (Typ) at 3.3 V <sup>(1)</sup>	Quick Output Discharge (QOD) <sup>(2)</sup>	Maximum Output Current	Enable
TPS22963C	14 m $\Omega$	715 $\mu$ s	No	3 A	Active High
TPS22964C	14 m $\Omega$	715 $\mu$ s	Yes	3 A	Active High

- (1) Additional rise time options are possible. Contact factory for more information.  
 (2) This feature discharges the output of the switch to ground through a 273  $\Omega$  resistor, preventing the output from floating (only in TPS22964C).

## 7 Pin Configuration and Functions

**Pin Assignments (YZP Package)**

<b>C</b>	GND	ON
<b>B</b>	VOUT	VIN
<b>A</b>	VOUT	VIN
	1	2

**Pin Functions**

PIN		I/O	DESCRIPTION
TPS22963/64	NAME		
C1	GND	-	Ground
C2	ON	I	Switch control input, active high. Do not leave floating
A1, B1	VOUT	O	Switch output
A2, B2	VIN	I	Switch input. Use a bypass capacitor to ground (ceramic)

## 8 Specifications

### 8.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
$V_{IN}$	Input voltage range	-0.3	6	V
$V_{OUT}$	Output voltage range	-0.3	6	V
$V_{ON}$	ON pin voltage range	-0.3	6	V
$I_{MAX}$	Maximum continuous switch current		3	A
$I_{PLS}$	Maximum pulsed switch current, 100 $\mu$ s pulse, 2% duty cycle, $T_A = -40^\circ\text{C}$ to $85^\circ\text{C}$		4	A
$T_A$	Operating free air temperature range	-40	85	$^\circ\text{C}$
$T_J$	Maximum junction temperature		125	$^\circ\text{C}$
$T_{stg}$	Storage temperature range	-65	150	$^\circ\text{C}$

### 8.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge		
	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	$\pm 2000$	V
Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	$\pm 500$		

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 500-V HBM is possible with the necessary precautions.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible with the necessary precautions.

### 8.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	TYP	MAX	UNIT
$V_{IN}$	Input voltage range	1		5.5	V
$V_{OUT}$	Output voltage range	0		5.5	V
$V_{IH, ON}$	High-level ON voltage	$V_{IN} = 2.5\text{ V to }5.5\text{ V}$	1.3	5.5	V
		$V_{IN} = 1\text{ V to }2.49\text{ V}$	1.1	5.5	
$V_{IL, ON}$	Low-level ON voltage	$V_{IN} = 2.5\text{ V to }5.5\text{ V}$	0	0.6	V
		$V_{IN} = 1\text{ V to }2.49\text{ V}$	0	0.4	
$C_{IN}$	Input capacitor		1 <sup>(1)</sup>		$\mu\text{F}$

- (1) Refer to the application section

### 8.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		TPS2296xC		UNIT
		YZP		
		6 PINS		
$R_{\theta JA}$	Junction-to-ambient thermal resistance	132.0		$^\circ\text{C/W}$
$R_{\theta Jctop}$	Junction-to-case (top) thermal resistance	1.4		
$R_{\theta JB}$	Junction-to-board thermal resistance	22.8		
$\Psi_{JT}$	Junction-to-top characterization parameter	5.7		
$\Psi_{JB}$	Junction-to-board characterization parameter	22.6		

- (1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, [SPRA953](http://www.ti.com/lit/zip/SRPA953).

## 8.5 Electrical Characteristics

 $V_{IN} = 1\text{ V to }5.5\text{ V}$ ,  $T_A = -40^\circ\text{C to }85^\circ\text{C}$  (unless otherwise noted)

## 10 Detailed Description

### 10.1 Overview

The TPS22963/64 is a single channel, 3-A load switch in a small, space saving CSP-6 package. These devices implement an N-channel MOSFET to provide an ultra-low On-resistance for a low voltage drop across the device. A controlled rise time is used in applications to limit the inrush current.

### 10.2 Functional Block Diagram

## 10.3 Feature Description

### 10.3.1 On/Off Control

The ON pin controls the state of the switch. It is an active “High” pin and has a low threshold making it capable of interfacing with low voltage GPIO control signals. It can be used with any microcontroller with 1.2 V, 1.8 V, 2.5 V, 3.3 V or 5.5 V GPIOs. Applying  $V_{IH}$  on the ON pin will put the switch in the ON-state and  $V_{IL}$  will put the switch in the OFF-state.

### 10.3.2 Quick Output Discharge

The TPS22964 includes the Quick Output Discharge (QOD) feature. When the switch is disabled, a discharge resistance with a typical value of 273Ω is connected between the output and ground. This resistance pulls down the output and prevents it from floating when the device is disabled.

## 10.4 Device Functional Modes

**Table 1. Function Table**

ON	VIN to VOUT	OUTPUT DISCHARGE <sup>(1) (2)</sup>
L	OFF	ACTIVE
H	ON	DISABLED

- (1) This feature discharges the output of the switch to ground through a 273 Ω resistor, preventing the output from floating.
- (2) This feature is in the TPS22964 device only (not in the TPS22963).

## 11 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 11.1 Application Information

#### 11.1.1 Input Capacitor

It is recommended to place a capacitor ( $C_{IN}$ ) between VIN and GND pins of TPS22963/64. This capacitor helps to limit the voltage drop on the input voltage supply when the switch turns ON into a discharged load capacitor. A 1-μF ceramic capacitor that is placed close to the IC pins is usually sufficient. Higher values of  $C_{IN}$  can be used to further reduce the voltage drop in high current applications.

#### 11.1.2 Output Capacitor

It is recommended to place a capacitor ( $C_{OUT}$ ) between VOUT and GND pins of TPS22963/64. This capacitor acts as a low pass filter along with the switch ON-resistance to remove any voltage glitches coming from the input voltage source. It is generally recommended to have  $C_{IN}$  greater than  $C_{OUT}$  so that once the switch is turned ON,  $C_{OUT}$  can charge up to  $V_{IN}$  without  $V_{IN}$  dropping significantly. A 0.1-μF ceramic capacitor that is placed close to the IC pins is usually sufficient.

## Application Information (continued)

### 11.1.3 Standby Power Reduction

**Figure 38. Standby Power Reduction**

Any end equipment that is being powered from the battery has a need to reduce current consumption in order to keep the battery charged for a longer time. TPS22963/64 helps to accomplish this by turning off the supply to the modules that are in standby state and hence significantly reduces the leakage current overhead of the standby modules.

### 11.1.4 Reverse Current Protection

The reverse current protection feature prevents the current to flow from VOUT to VIN when TPS22963/64 is disabled. This feature is particularly useful when the output of TPS22963/64 needs to be driven by another voltage source after TPS22963/64 is disabled (for example in a power multiplexer application). In order for this feature to work, TPS22963/64 has to be disabled and either of the following conditions shall be met:  $V_{IN} > 1\text{ V}$  or  $V_{OUT} > 1\text{ V}$ .

Figure 39 demonstrates the ideal behavior of reverse current protection circuit in TPS22963/64. After the device is disabled via the ON pin and VOUT is forced to an external voltage  $V_{FORCE}$ , a very small amount of current given by  $I_{RC,VIN}$  will flow from VOUT to VIN. This will prevent any extra current loading on the voltage source supplying the  $V_{FORCE}$  voltage.

$I_{VIN}$  = Current through VIN pin.

$V_{SRC}$  = Input voltage applied to the device.

$V_{FORCE}$  = External voltage source forced at VOUT pin of the device.

$I_{OUT}$  = Output load current.

**Figure 39. Reverse Current Protection**

## Application Information (continued)

### 11.1.5 Power Supply Sequencing Without a GPIO Input

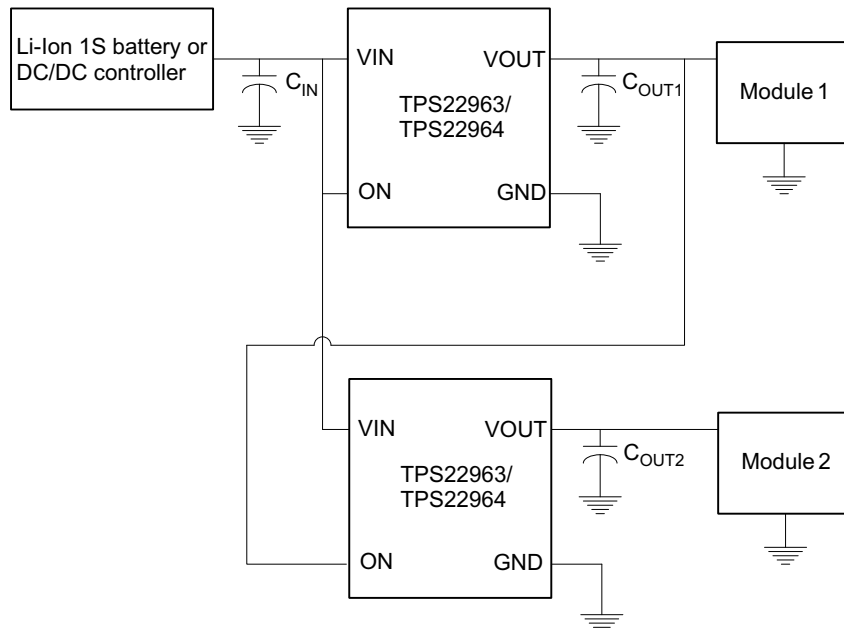

Figure 40. Power Supply Sequencing Without a GPIO Input

In many end equipments, there is a need to power up various modules in a pre-determined manner. TPS22963/64 can solve the problem of power sequencing without adding any complexity to the overall system. Figure 40 shows the configuration required for powering up two modules in a fixed sequence. The output of the first load switch is tied to the enable of the second load switch, so when Module 1 is powered the second load switch is enabled and Module 2 is powered.

## 11.2 Typical Application

TPS22963/64 is an ultra-low ON-resistance, 3-A integrated load switch that is capable of interfacing directly with 1S battery in portable consumer devices such as smartphones, tablets etc. Its wide input voltage range (1 V to 5.5 V) makes it suitable to be used for lower voltage rails as well inside different end equipments to accomplish power sequencing, inrush current control and reducing leakage current in sub-systems that are in standby mode. Figure 41 shows the typical application circuit of TPS22963/64.

Figure 41. Typical Application Circuit

### 11.2.1 Design Requirements

DESIGN PARAMETER	EXAMPLE VALUE
$V_{IN}$	3.3 V
$C_L$	4.7 $\mu$ F
Maximum Acceptable Inrush Current	30 mA

## 11.2.2 Detailed Design Procedure

### 11.2.2.1 Managing Inrush Current

When the switch is enabled, the output capacitors must be charged up from 0 V to the set value (3.3 V in this example). This charge arrives in the form of inrush current. Inrush current can be calculated using the following equation:

$$I_{\text{INRUSH}} = C_L \times \frac{dV_{\text{OUT}}}{dt}$$

where

- C = output capacitance
- dV = output voltage
- dt = rise time

(1)

The TPS22963/64 offers a controlled rise time for minimizing inrush current. This device can be selected based upon the minimum acceptable rise time which can be calculated using the design requirements and the inrush current equation. An output capacitance of 4.7 μF will be used since the amount of inrush current increases with output capacitance:

$$30 \text{ mA} = 4.7 \text{ } \mu\text{F} \times 3.3 \text{ V} / dt \tag{2}$$

$$dt = 517 \text{ } \mu\text{s} \tag{3}$$

To ensure an inrush current of less than 30 mA, a device with a rise time greater than 517 μs must be used. The TPS22963/64 has a typical rise time of 715 μs at 3.3 V which meets the above design requirements.

### 11.2.3 Application Curves

Figure 42. TPS22963/64 Inrush Current with 4.7 μF Output Capacitor

## 12 Power Supply Recommendations

The device is designed to operate with a VIN range of 1 V to 5.5 V. This supply must be well regulated and placed as close to the device terminal as possible with the recommended 1 µF bypass capacitor. If the supply is located more than a few inches from the device terminals, additional bulk capacitance may be required in addition to the ceramic bypass capacitors. If additional bulk capacitance is required, an electrolytic, tantalum, or ceramic capacitor of 10 µF may be sufficient.

## 13 Layout

### 13.1 Layout Guidelines

For best performance, all traces should be as short as possible. To be most effective, the input and output capacitors should be placed close to the device to minimize the effects that parasitic trace inductances may have on normal operation. Using wide traces for VIN, VOUT and GND will help minimize the parasitic electrical effects.

For higher reliability, the maximum IC junction temperature,  $T_{J(max)}$ , should be restricted to 125°C under normal operating conditions. Junction temperature is directly proportional to power dissipation in the device and the two are related by Equation 4.

$$T_J = T_A + \Theta_{JA} \times P_D$$

where

- $T_J$  = Junction temperature of the device
- $T_A$  = Ambient temperature
- $P_D$  = Power dissipation inside the device
- $\Theta_{JA}$  = Junction to ambient thermal resistance. See Thermal Information section of the datasheet. This parameter is highly dependent on board layout.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. ## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
