

3ch Programmable Clock Generator

Generate 3 application clocks

BU7331EKN

No.09004EAT01

●Description

The BU7331EKN integrates a 3ch PLL. The frequency of each PLL can be set via serial interface control, making it compatible with a wide range of digital applications.

In addition, sudden frequency changes are handled via rewriting through the register, and BU7331EKN is suitable for sets with different frequencies, resulting in more efficient parts management and shorter development time.

●Features

- 1) To generate clocks by connecting reference 5.0MHz ~ 48.0MHz.
- 2) 5.0MHz~75.0MHz output frequency range.
- 3) All settings and operation controlled via 2-wire serial interface
- 4) Individual level shifter attached to each output
- 5) HQFN20V package

●Application

General digital product of mobile phone, DSC, DVD-player etc.

●Absolute Maximum ratings (Ta=25°C)

Parameter	Symbol	Limits	Unit
Supply voltage (Core)	VDD_CORE	-0.2 ~ 2.2	V
Supply voltage (I/O)	VDD_IO	-0.2 ~ 4.0	V
Input Voltage	VIN	-0.2 ~ VDD+0.2	V
Storage Temperature range	Tstg	-55 ~ 125	°C
Power dissipation	PD	599.8 * ¹	mW

*¹ A measure value at mounting on 70 x 70 x 1.6mm glass epoxy substrate.
In the case of exceeding Ta=25°C, 6.0mW should be reduced per 1°C.

* The radiation-resistance design is not carried out.

* Operation is not guaranteed.

●Operating Conditions

Parameter	Symbol	Limits	Unit
Supply voltage (Core)	VDD_CORE	1.65 ~ 1.80 ~ 1.95	V
Supply voltage (VDD_CLK)	VDD_CLK	1.40 ~ 3.60	V
Supply voltage (VDD_SIF)	VDD_SIF	1.40 ~ 3.60 * ¹	V
Input "H" Voltage	VIH	0.8VDD ~ VDD	V
Input "L" Voltage	VIL	0.0 ~ 0.2VDD	V
Operating Temperature	topr	-20 ~ 75	°C
Input frequency (xtal use) * ²	Ref_xtal	5.0 ~ 27.0	MHz
Input frequency (Not xtal use) * ³	Ref_clk	5.0 ~ 48.0	MHz
5~48MHz Output Load1 (VDD_CLK=1.40~1.65V)	CL1	10 (MAX)	pF
5~48MHz Output Load 2 (VDD_CLK=1.65~3.60V)	CL2	15 (MAX)	pF
5~75MHz Output Load (VDD_CLK=2.70~3.60V)	CL3	15 (MAX)	pF

*¹ When setting it as VDD_SIF=1.40V~1.45V, standby current may flow by VDD_CORE=1.90V~1.95V.
Use by VDD_CORE=1.80V is recommended.

*² Need a resistor for bias between 6PIN and 7PIN.

*³ The input amplitude level range is 0.6Vp-p ~ VDD_COREp-p.
Refer to application note about input form details.

●Electrical Characteristics

(Unless otherwise specified, VDD_CORE=1.8V, VDD_CLK=VDD_SIF=3.3V, Ta=25°C , at no output loads.)

Parameter	Symbol	Limit			Unit	Conditions
		Min.	Min.	Min.		
Input H current	IupH	0.0	-	3.0	μA	VIH=3.3V
Input L current	IupL	-3.0	-	0.0	μA	VIL=0.0V
Output H voltage1	VOH1	3.1	3.2	-	V	IOH=4.5mA (VDD_CLK=3.3V)
Output L voltage1	VOL1	-	0.1	0.2	V	IOL=4.0mA (VDD_CLK=3.3V)
Output H voltage2	VOH2	1.2	1.3	-	V	IOH=2.5mA (VDD_CLK=1.4V)
Output L voltage2	VOL2	-	0.1	0.2	V	IOL=2.5mA (VDD_CLK=1.4V)
Operating circuit current (CORE)	IDD1	-	7.5	10.0	mA	3ch PLL "ON" mode
Output frequency	CLK	5.000000	-	48.000000	MHz	VDD_CLK=1.40~1.65V Output Load=10pF (MAX)
		5.000000	-	48.000000	MHz	VDD_CLK=1.65~3.60V Output Load =15pF (MAX)
		5.000000	-	75.000000	MHz	VDD_CLK=2.70~3.60V Output Load =15pF (MAX)

* The circuit current at I/O is depending on output frequency, output load and the voltage of VDD_CLK.

●Block diagram

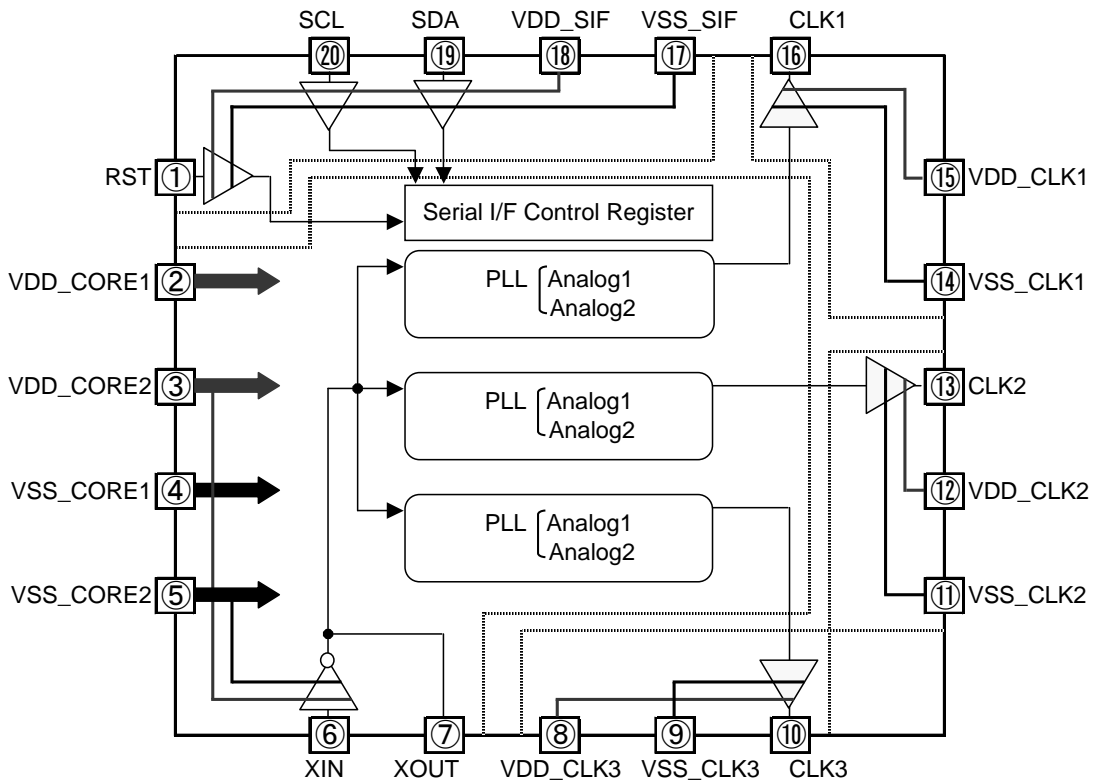

Fig.1 BU7331EKN Block diagram

●Package Outline, Appearance of Marker

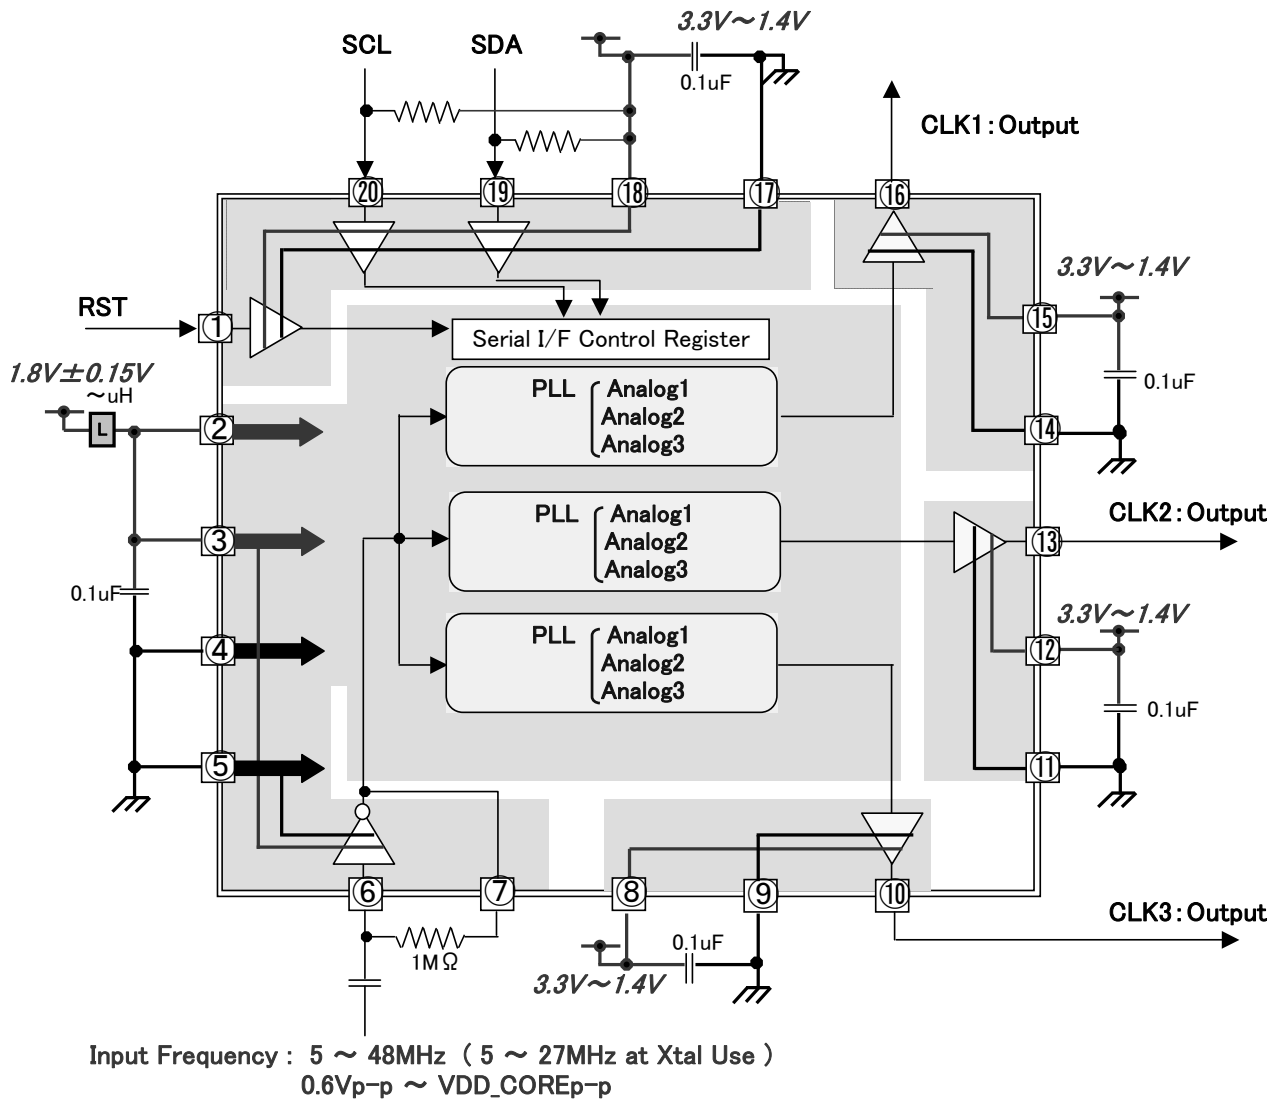

Fig.2 Package Outline, Appearance of Marker

●Pin Function

Pin No.	PIN NAME	Function
1	RST	Reset
2	VDD_CORE1	Power Supply for core
3	VDD_CORE2	Power Supply for core
4	VSS_CORE1	GND for core
5	VSS_CORE2	GND for core
6	XIN	Crystal input terminal
7	XOUT	Crystal output terminal
8	VDD_CLK3	Power Supply for CLK3
9	VSS_CLK3	GND for CLK3
10	CLK3	CLK3 output terminal
11	VSS_CLK2	GND for CLK2
12	VDD_CLK2	Power Supply for CLK2
13	CLK2	CLK2 output terminal
14	VSS_CLK1	GND for CLK1
15	VDD_CLK1	Power Supply for CLK1
16	CLK1	CLK1 output terminal
17	VSS_SIF	GND for Serial IF
18	VDD_SIF	Power Supply for Serial IF
19	SDA	Serial Data Line
20	SCL	Serial Clock Line

● Typical Application Circuit

Notes)

- Basically, mount the BU7331EKN on the board and use it.
(Unless it is mounted on the board, it may not demonstrate the full characteristics.)
- Mount a 0.1- μ F capacitor in the vicinity of BU7331EKN PIN between PIN 2 - 3 (VDD_CORE) and PIN 4 - 5 (VSS_CORE), PIN 8 (VDD_CLK3) and PIN 9 (VSS_CLK3), PIN 11 (VSS_CLK2) and PIN 12 (VDD_CLK2), PIN 14 (VSS_CLK1) and PIN 15 (VDD_CLK1), and PIN 17 (VSS_SIF) and PIN 18 (VDD_SIF), respectively.
- Depending on the conditions of the board, mount an additional electrolytic capacitor between the power supply and GND.
- For EMI protection, it is effective to put ferrite beads in the origin of power to be supplied to the BU7331EKN from the board or to insert a capacitor (of not more than 1 Ω), which bypasses high frequency desired, between the power supply and the GND.
- We believe that this typical application circuit is to be recommended. However, to use it, make further thorough check for the characteristics.
- For ICs with more than two power supplies, instantaneous rush currents may flow due to the order in which the power supplies turn ON or delay in turning ON them. To avoid that, pay careful attention to power supply coupling capacitance, and the width and routing of power supply wirings and GND pattern wirings.

●Examples of Frequency Matrices

Frequency Matrix (Analog1-1)

XIN=19.200MHz & P1 × P2=2 [P1 × P2 is selectable from (1, 5, 10, or 20) × (2, 4, 6, or 8).]

The white areas represent areas in which output is enabled. The blue areas represent areas in which output is enabled under the condition of VDD_CLK=2.7 to 3.6V.

The other areas (i.e., gray areas) represent areas in which output is disabled.

Frequency Matrix (Analog1-3)

XIN=19.200MHz & P1 × P2=2 [P1 × P2 is selectable from (1, 5, 10, or 20) × (2, 4, 6, or 8).]

The white areas represent areas in which output is enabled. The blue areas represent areas in which output is enabled under the condition of VDD_CLK=2.7 to 3.6V.

The other areas (i.e., gray areas) represent areas in which output is disabled.

Frequency Matrix (Analog2-2)

XIN=19.200MHz & P1 × P2=8 [P1 × P2 is selectable from (1, 5, 10, or 20) × (2, 4, 6, or 8).]

The white areas represent areas in which output is enabled. The other areas (i.e., gray areas) represent areas in which output is disabled.

Frequency Matrix (Analog2-4)

XIN=19.200MHz & P1 × P2=8 [P1 × P2 is selectable from (1, 5, 10, or 20) × (2, 4, 6, or 8).]

The white areas represent areas in which output is enabled. The other areas (i.e., gray areas) represent areas in which output is disabled.

Frequency Matrix (Analog2-6)

XIN=19.200MHz & P1 × P2=8 [P1 × P2 is selectable from (1, 5, 10, or 20) × (2, 4, 6, or 8).]

The white areas represent areas in which output is enabled. The other areas (i.e., gray areas) represent areas in which output is disabled.

When reference frequency = 27MHz and if Analog1 is used:

The reference frequency can be input not only at 19.200MHz but also in the range of 5 to 48MHz (or 5 to 27MHz to use an xtal).

For example, the following section shows a frequency matrix when a 27-MHz frequency is input.

If you want to use any other reference frequency, contact your ROHM representative.

XIN=27.000MHz & P1 × P2=2 [P1 × P2 is selectable from (1, 5, 10, or 20) × (2, 4, 6, or 8).]

The white areas represent areas in which output is enabled. The blue areas represent areas in which output is enabled under the condition of VDD_CLK=2.7 to 3.6V.

The other areas (i.e., gray areas) represent areas in which output is disabled.

1, 20		10, 13, 16	
6 7		19	

●Notes for use

(1) Absolute Maximum Ratings

An excess in the absolute maximum ratings, such as supply voltage, temperature range of operating conditions, etc., can break down devices, thus making impossible to identify breaking mode such as a short circuit or an open circuit. If any special mode exceeding the absolute maximum ratings is assumed, consideration should be given to take physical safety measures including the use of fuses, etc.

(2) Operating conditions

These conditions represent a range within which characteristics can be provided approximately as expected. The electrical characteristics are guaranteed under the conditions of each parameter.

(3) Reverse connection of power supply connector

The reverse connection of power supply connector can break down ICs. Take protective measures against the breakdown due to the reverse connection, such as mounting an external diode between the power supply and BU7331EKN's power supply terminal.

(4) Power supply line

Design PCB pattern to provide low impedance for the wiring between the power supply and the GND lines. In this regard, for the digital block power supply and the analog block power supply, even though these power supplies has the same level of potential, separate the power supply pattern for the digital block from that for the analog block, thus suppressing the diffraction of digital noises to the analog block power supply resulting from impedance common to the wiring patterns. For the GND line, give consideration to design the patterns in a similar manner.

Furthermore, for all power supply terminals to ICs, mount a capacitor between the power supply and the GND terminal. At the same time, in order to use an electrolytic capacitor, thoroughly check to be sure the characteristics of the capacitor to be used present no problem including the occurrence of capacity dropout at a low temperature, thus determining the constant.

(5) GND voltage

Make setting of the potential of the GND terminal so that it will be maintained at the minimum in any operating state. Furthermore, check to be sure no terminals are at a potential lower than the GND voltage including an actual electric transient.

(6) Short circuit between terminals and erroneous mounting

In order to mount ICs on a set PCB, pay thorough attention to the direction and offset of BU7331EKN. Erroneous mounting can break down BU7331EKN. Furthermore, if a short circuit occurs due to foreign matters entering between terminals or between the terminal and the power supply or the GND terminal, BU7331EKN can break down.

(7) Operation in strong electromagnetic field

Be noted that using ICs in the strong electromagnetic field can malfunction them.

(8) Inspection with set PCB

On the inspection with the set PCB, if a capacitor is connected to a low-impedance IC terminal, BU7331EKN can suffer stress. Therefore, be sure to discharge from the set PCB by each process. Furthermore, in order to mount or dismount the set PCB to/from the jig for the inspection process, be sure to turn OFF the power supply and then mount the set PCB to the jig. After the completion of the inspection, be sure to turn OFF the power supply and then dismount it from the jig. In addition, for protection against static electricity, establish a ground for the assembly process and pay thorough attention to the transportation and the storage of the set PCB.

(9) Input terminals

In terms of the construction of IC, parasitic elements are inevitably formed in relation to potential. The operation of the parasitic element can cause interference with circuit operation, thus resulting in a malfunction and then breakdown of the input terminal. Therefore, pay thorough attention not to handle the input terminals, such as to apply to the input terminals a voltage lower than the GND respectively, so that any parasitic element will operate. Furthermore, do not apply a voltage to the input terminals when no power supply voltage is applied to BU7331EKN. In addition, even if the power supply voltage is applied, apply to the input terminals a voltage lower than the power supply voltage or within the guaranteed value of electrical characteristics.

(10) Ground wiring pattern

If small-signal GND and large-current GND are provided, It will be recommended to separate the large-current GND pattern from the small-signal GND pattern and establish a single ground at the reference point of the set PCB so that resistance to the wiring pattern and voltage fluctuations due to a large current will cause no fluctuations in voltages of the small-signal GND. Pay attention not to cause fluctuations in the GND wiring pattern of external parts as well.

(11) External capacitor

In order to use a ceramic capacitor as the external capacitor, determine the constant with consideration given to a degradation in the nominal capacitance due to DC bias and changes in the capacitance due to temperature, etc.

Notice

Precaution on using ROHM Products

- Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment ^(Note 1), transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASS III	CLASS III	CLASS II b	CLASS III
CLASS IV		CLASS III	

- ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
 - Installation of protection circuits or other protective devices to improve system safety
 - Installation of redundant circuits to reduce the impact of single or multiple circuit failure
- Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc. prior to use, must be necessary:
 - Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
 - Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
 - Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl₂, H₂S, NH₃, SO₂, and NO₂
 - Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
 - Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
 - Sealing or coating our Products with resin or other coating materials
 - Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
 - Use of the Products in places subject to dew condensation
- The Products are not subject to radiation-proof design.
- Please verify and confirm characteristics of the final or mounted products in using the Products.
- In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
- De-rate Power Dissipation (Pd) depending on Ambient temperature (Ta). When used in sealed area, confirm the actual ambient temperature.
- Confirm that operation temperature is within the specified range described in the product specification.
- ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

Precaution for Mounting / Circuit board design

- When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
- In principle, the reflow soldering method must be used; if flow soldering method is preferred, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of Ionizer, friction prevention and temperature / humidity control).

Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
 - [a] the Products are exposed to sea winds or corrosive gases, including Cl₂, H₂S, NH₃, SO₂, and NO₂
 - [b] the temperature or humidity exceeds those recommended by ROHM
 - [c] the Products are exposed to direct sunshine or condensation
 - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

Precaution for Product Label

QR code printed on ROHM Products label is for ROHM's internal use only.

Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

Precaution for Foreign Exchange and Foreign Trade act

Since our Products might fall under controlled goods prescribed by the applicable foreign exchange and foreign trade act, please consult with ROHM representative in case of export.

Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data. ROHM shall not be in any way responsible or liable for infringement of any intellectual property rights or other damages arising from use of such information or data.:
2. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the information contained in this document.

Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

General Precaution

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
