

Introduction

The ISL62391 and ISL62392 evaluation boards demonstrate the performance of ISL62391 and ISL62392 triple-output controllers. The ISL62391 and ISL62392 controllers include two pulse-width modulation (PWM) controllers featured with Intersil's patented R³ technology, output adjustable from 0.6V to 5.5V, and a linear regulator (LDO3) that generates a fixed 3.3V output and can deliver up to 100mA.

The evaluation board includes two Enable switches, an LED Power-Good indicator and various test points. Each switching channel has an on-board dynamic load generator for evaluating the transient-load response. There are four different evaluation boards which provide flexible evaluation options. Table 1 shows a brief description of the evaluation boards.

TABLE 1. EVALUATION BOARD DESCRIPTION

EVALUATION BOARD	CHANNEL-1	CHANNEL-2	OCF
ISL62391LOEVAL1Z	3.3V/8A	5V/8A	~10A
ISL62391HIEVAL1Z	1.05V/15A	1.5V/15A	~20A
ISL62392LOEVAL1Z	3.3V/8A	5V/8A	~10A
ISL62392HIEVAL1Z	1.05V/15A	1.5V/15A	~20A

What's Inside

The Evaluation Board Kit contains the following materials:

- ISL6239xxxEVAL1Z Evaluation Board
- ISL62391, ISL62392 Datasheet
- ISL62391, ISL62392 Evaluation Board User Guide (this document)

What's Needed

The following materials will be needed in order to perform testing:

- Adjustable +25V, 30A Power Supply
- +12V, 100mA Power Supply
- Precision Digital Multimeter
- 3 Electronic Loads
- 4-Channel Oscilloscope

Enable Control

The evaluation board provides flexible control logic to enable or disable the outputs, and to program the two PWM channels' start-up sequence. For start-up timing sequence, please refer to the ISL62391, ISL62392 datasheet waveforms. Table 2 is the Enable controller truth table.

TABLE 2. ENABLE TRUTH TABLE

EN1	EN2	START-UP SEQUENCE
Low	Low	Both Channel outputs OFF simultaneously
Low	Float	Both Channel outputs OFF simultaneously
Float	Low	Both Channel outputs OFF simultaneously
Float	Float	Both Channel outputs OFF simultaneously
Low	High	Channel-1 OFF, Channel-2 ON
High	Low	Channel-1 ON, Channel-2 OFF
High	High	Both Channel outputs ON simultaneously
Float	High	Channel-1 enabled after Channel-2 is in regulation
High	Float	Channel-2 enabled after Channel-1 is in regulation

Resistor Current Sense Configuration

The evaluation board is pre-configured with inductor DCR current sense. For more precise overcurrent protection, it also provides the option of resistor current sense. Figure 1 shows the configuration for resistor current sense.

FIGURE 1. RESISTOR CURRENT SENSE CIRCUIT

For Channel-1, the ISL62391 and ISL62392 monitor the OCSET1 pin and the ISEN1 pin voltages. Once the OCSET1 pin voltage is higher than the ISEN1 pin voltage for more than 10 μ s, the ISL62391 and ISL62392 declare an overcurrent fault. For a chosen overcurrent set point I_{OC} and current sense resistor R_{SENSE} , the value of R_{OCSET} is determined by Equation 1:

$$R_{OCSET} = \frac{I_{OC} \cdot R_{SENSE}}{10\mu A} \quad (EQ. 1)$$

Where:

- R_{OCSET} (Ω) is the resistor used to program the overcurrent setpoint
- I_{OC} is the output current threshold that will activate the OCP circuit
- R_{SENSE} is current sense resistor (R_3 for Channel-1 and R_{25} for Channel-2)

Take Channel-1 as an example, once the value of R_{OCSET} is calculated, follow the following procedure to configure the resistor current sense circuit:

- Step 1:** Open the "DCR SENSE" solder bridge and connect the "RESISTOR SENSE" solder bridge on the PCB bottom layer;
- Step 2:** Remove R_7 (R_{22} for Channel-2);
- Step 3:** Replace R_3 (R_{25} for Channel-2) with R_{SENSE} ;
- Step 4:** Replace C_6 (C_{25} for Channel-2) with R_{OCSET} ;
- Step 5:** Replace replace R_{19} (R_{18} for Channel-2) with R_{OCSET} .

Dynamic Load Generator

The evaluation board provides each PWM channel an on-board dynamic load generator for evaluating the transient-load response, which are controlled by SW1 and SW2 respectively. The dynamic load generator applies a 300 μ s pulse load across V_{OUT} and GND. The transient load slew-rate can be trimmed by adjusting the resistors R_{28} , R_{34} for the rising edge, and R_{29} , R_{35} for the falling edge. A +12V power supply is needed to power the dynamic load generator.

Connections and Test Points

The following table describes the function and operation of the evaluation boards.

NUMBER	NAME	FUNCTION/OPERATION
INTERFACES AND CONNECTIONS		
TP3	VBAT	V_{IN} positive power input
TP4	GND	V_{IN} return power input
TP1	VOUT1	Channel-1 positive power output
TP2	GND	Channel-1 return power output
TP11	VOUT2	Channel-2 positive power output
TP12	GND	Channel-2 return power output
TP14	+12V	+12V positive power input, used for the power supply of the on-board dynamic-load generator
TP15	GND	+12V return power input
TEST POINTS		
J3	PHASE1	Scope-probe socket for measuring Channel-1 phase node
J6	PHASE2	Scope-probe socket for measuring Channel-2 phase node
J2	VOUT1	Scope-probe socket for measuring Channel-1 output
J5	VOUT2	Scope-probe socket for measuring Channel-2 output
J4	FLOAT_FCCM	Remove the jumper will float the FCCM pin
J7	FLOAT_EN1	Remove the jumper will float the EN1 pin
J1	FLOAT_EN2	Remove the jumper will float the EN2 pin
TP13	EN1	Test point of EN1 pin
TP8	EN2	Test point of EN2 pin
TP9	LDO3EN	Test point of LDO3EN pin
TP10	FCCM	Test point of FCCM pin
POWER-GOOD INDICATOR		
TP5	PGOOD	Test point of PGOOD pin
D1		Power-Good indicator. Green when VOUT1 and VOUT2 are both in regulation.
LINEAR REGULATOR		
TP6	LDO3	LDO3 linear regulator positive power output
TP7	GND	LDO3 linear regulator return power output
SWITCHES		
SW1		ON/OFF control of channel-2 dynamic-load generator. Toggle to ON will enable the dynamic load, toggle to OFF will disable the transient load
SW2		ON/OFF control of channel-1 dynamic-load generator. Toggle to ON will enable the dynamic load, toggle OFF will disable the transient load
U2		ON: High level for EN1, EN2, LDO3EN and FCCM, respectively OFF: Low level for EN1, EN2, LDO3EN and FCCM, respectively

Test Set-up

Figure 2 shows a typical test configuration.

FIGURE 2. TYPICAL TEST CONFIGURATION

ISL62391LOEVAL1Z, ISL62392LOEVAL1Z Evaluation Board Bill of Materials

ISL62391LOEVAL1Z and ISL62392LOEVAL1Z evaluation boards use the same PCB and schematic, thus the same bill of materials except for the controller U1.
