**Caution** This device is used it is necessary to use DC cut capacitors.

The value of DC cut capacitors should be chosen to accommodate the frequency of operation, bandwidth, switching speed and the condition with actual board of your system.

## EVALUATION CIRCUIT

**Remark**  $C_0 = 1\,000\text{ pF}$

**Caution** This IC has pull down resistance between RF line and GND, witch fixes electric potential of RF line to 0 V, then the IC cannot be used for DC switching.

The application circuits and their parameters are for reference only and are not intended for use in actual design-ins.
