

LV8716QA

Bi-CDMOS LSI

Dual H-bridge Motor Driver

ON Semiconductor®

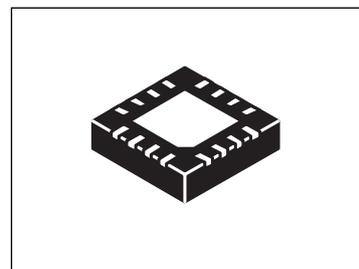

<http://onsemi.com>

Overview

LV8716QA is 2ch H-bridge driver in the forward/reverse/brake/standby 4 mode corresponding to a low voltage drive. It is the best for the stepper motors for a battery drive, such as a mobile printer and DC motors.

Function

- 2-channel PWM current control H-bridge driver
- BiCDMOS process IC
- Low ON resistance (Upper side : 0.65Ω, Lower side 0.35Ω : Ta=25°C, Io=1.0A)
- 4 mode of forward/reverse/brake/standby
- Available constant current control less RF resistance
- Built-in UVLO, TSD circuit

QFN16 3x3, 0.5P

Specifications

Absolute Maximum Ratings at Ta = 25°C

| Parameter | Symbol | Conditions | Ratings | Unit |
|-----------------------------|--------|------------------------|-------------|------|
| Motor supply voltage | VMmax | VM1, VM2 | 12.6 | V |
| Output peak current | Iopeak | Tw ≤ 10ms, duty 20% | 1.5 | A |
| Output current | Iomax | | 1.0 | A |
| Logic input voltage | VINmax | PS, IN1, IN2, IN3, IN4 | -0.3 to +6 | V |
| Allowable power dissipation | Pd max | * | 1.55 | W |
| Operating temperature | Topr | | -20 to +85 | °C |
| Storage temperature | Tstg | | -55 to +150 | °C |

*Specified circuit board : 57mm×57mm×1.6mm, glass epoxy 2-layer board, with backside mounting.

Caution 1) Absolute maximum ratings represent the values which cannot be exceeded for any length of time.

Caution 2) Even when the device is used within the range of absolute maximum ratings, as a result of continuous usage under high temperature, high current, high voltage, or drastic temperature change, the reliability of the IC may be degraded. Please contact us for the further details.

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

ORDERING INFORMATION

See detailed ordering and shipping information on page 15 of this data sheet.

LV8716QA

Recommended Operating Conditions at $T_a = 25^\circ\text{C}$

| Parameter | Symbol | Conditions | Ratings | Unit |
|----------------------------|--------|--------------------|-------------|------|
| Motor supply voltage range | VM | VM1,VM2 | 2.7 to 10.5 | V |
| Logic input voltage | VIN | PS,IN1,IN2,IN3,IN4 | 0 to 5.5 | V |

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

Electrical Characteristics at $T_a = 25^\circ\text{C}$, $V_M = 7.2\text{V}$

| Parameter | Symbol | Conditions | Ratings | | | Unit |
|---|--------------------|--|---------|------|-------|------------------|
| | | | min | typ | max | |
| Standby mode current | IMstn | PS="L", I(VM1)+I(VM2) | | 0 | 500 | nA |
| Supply Current | IM | PS="H", IN1=IN3="H", No load I(VM1)+I(VM2) | | 1.4 | 1.82 | mA |
| VM low voltage cutting threshold voltage | Vthvm | | 2.3 | 2.45 | 2.6 | V |
| Low voltage hysteresis voltage | Vthhis | | 100 | 200 | 300 | mV |
| Thermal shutdown temperature | TSD | Design guarantee | 150 | 180 | 200 | $^\circ\text{C}$ |
| Thermal hysteresis width | ΔTSD | Design guarantee | | 40 | | $^\circ\text{C}$ |
| Output on resistance | Ronu | Io=1A,Source-side | | 0.65 | 0.85 | Ω |
| | Rond | Io=1A,Sink-side | | 0.35 | 0.45 | Ω |
| Output leakage current | Ioleak | | | | 20 | μA |
| Diode forward voltage | VD | ID=-1A | | 1 | 1.2 | V |
| Logic high-level input voltage | Vinh | PS,IN1,IN2,IN3,IN4 | 2.0 | | 5.5 | V |
| Logic low-level input voltage | Vinl | | 0 | | 0.8 | V |
| PS pin input current | IinL | VIN=0.8V | 5 | 8 | 11 | μA |
| | IinH | VIN=3.3V | 35 | 50 | 65 | μA |
| Logic pin input current (IN1,IN2,IN3,IN4) | IinL | VIN=0.8V | 5 | 8 | 11 | μA |
| | IinH | VIN=3.3V | 23 | 33 | 43 | μA |
| Chopping cycle | Tchop | | 12 | 16 | 20 | μs |
| Current detection reference voltage | Vref | | 0.194 | 0.2 | 0.206 | V |
| Output current detection current | Ircs | Io=0.5A, RCS=0V | 115 | 125 | 135 | μA |

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

Package Dimensions

unit : mm

QFN16 3x3, 0.5P

CASE 485G-01

ISSUE F

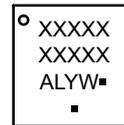

NOTES:

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
2. CONTROLLING DIMENSION: MILLIMETERS.
3. DIMENSION b APPLIES TO PLATED TERMINAL AND IS MEASURED BETWEEN 0.25 AND 0.30 MM FROM TERMINAL.
4. COPLANARITY APPLIES TO THE EXPOSED PAD AS WELL AS THE TERMINALS.

| MILLIMETERS | | | |
|-------------|----------|------|------|
| DIM | MIN | NOM | MAX |
| A | 0.80 | 0.90 | 1.00 |
| A1 | 0.00 | 0.03 | 0.05 |
| A3 | 0.20 REF | | |
| b | 0.18 | 0.24 | 0.30 |
| D | 3.00 BSC | | |
| D2 | 1.65 | 1.75 | 1.85 |
| E | 3.00 BSC | | |
| E2 | 1.65 | 1.75 | 1.85 |
| e | 0.50 BSC | | |
| k | 0.18 TYP | | |
| L | 0.30 | 0.40 | 0.50 |
| L1 | 0.00 | 0.08 | 0.15 |

LV8716QA

Substrate Specifications (Substrate recommended for operation of LV8716QA)

| | |
|-----------------------|--|
| Size | : 90mm × 90mm × 1.6mm (two-layer substrate) |
| Material | : Glass epoxy |
| Copper wiring density | : L1 = 85%, L2 = 90% |

L1: Copper wiring pattern diagram

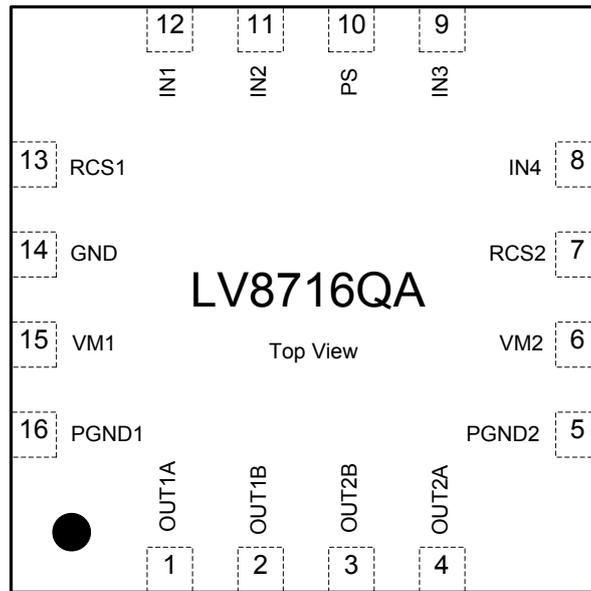

L2: Copper wiring pattern diagram

Cautions

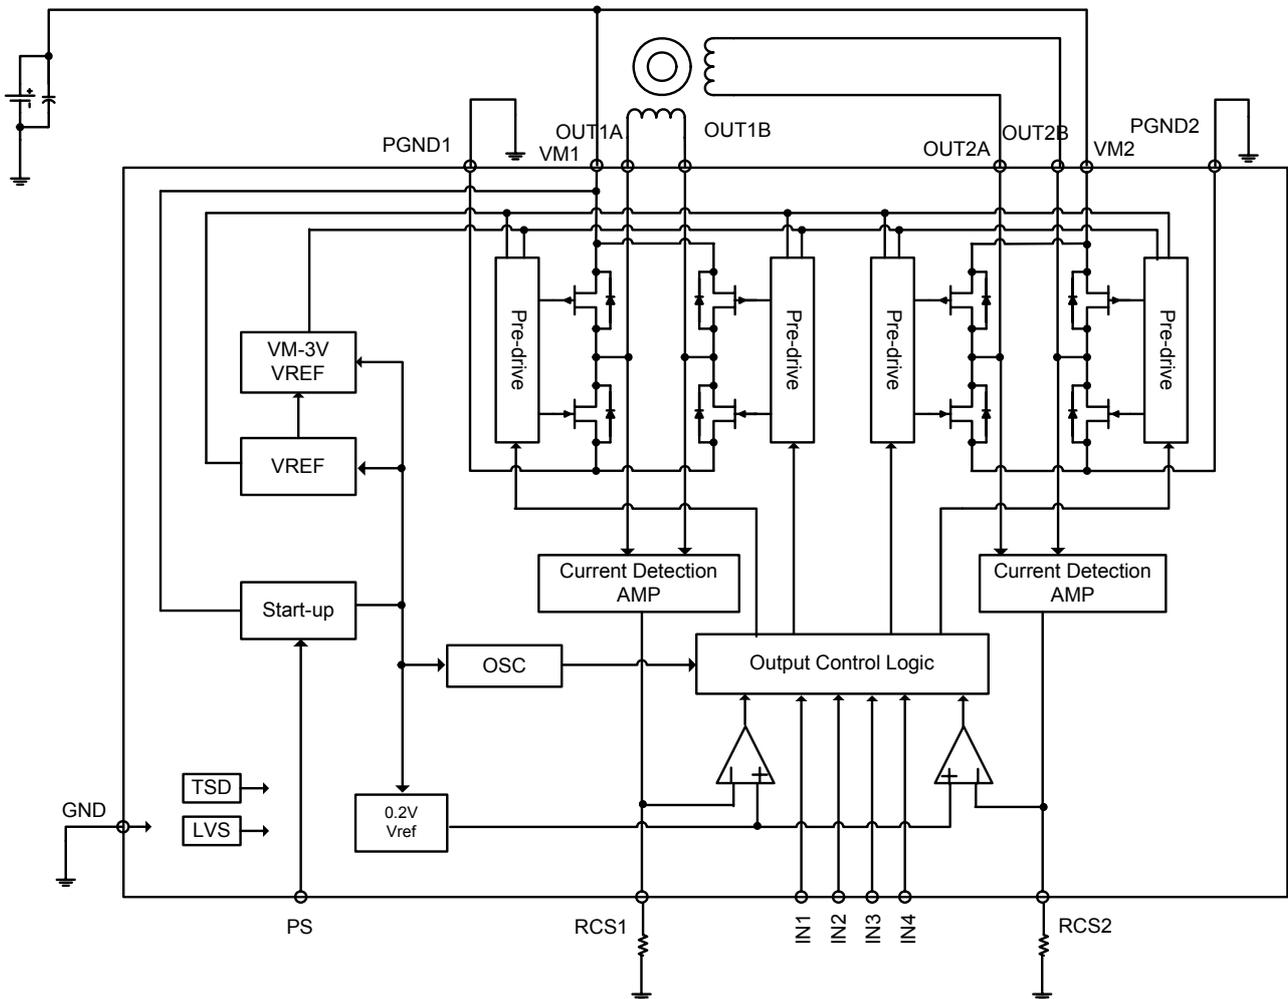

- 1) The data for the case with the Exposed Die-Pad substrate mounted shows the values when 90% or more of the Exposed Die-Pad is wet.
- 2) For the set design, employ the derating design with sufficient margin.
Stresses to be derated include the voltage, current, junction temperature, power loss, and mechanical stresses such as vibration, impact, and tension.
Accordingly, the design must ensure these stresses to be as low or small as possible.
The guideline for ordinary derating is shown below:
 - (1) Maximum value 80% or less for the voltage rating
 - (2) Maximum value 80% or less for the current rating
 - (3) Maximum value 80% or less for the temperature rating
- 3) After the set design, be sure to verify the design with the actual product.
Confirm the solder joint state and verify also the reliability of solder joint for the Exposed Die-Pad, etc.
Any void or deterioration, if observed in the solder joint of these parts, causes deteriorated thermal conduction, possibly resulting in thermal destruction of IC.

Description of operation

1. Input pin function

The function to prevent that the current flows into a power supply from the each input pin is built in. Therefore, current does not flow into power supply from the input pin when power supply is OFF.

2. Chip enables function

Standby mode/operating mode of the IC are switched by setting the PS pin. In the standby-state, the IC enters a power saving mode and all logic is reset. In the standby-state, internal regulator circuit is not operative.

| PS | Condition | Internal regulator |
|-------------|----------------|--------------------|
| “L” or OPEN | Standby mode | Standby |
| “H” | Operating mode | Operation |

3. Output control signal logic

DC motor

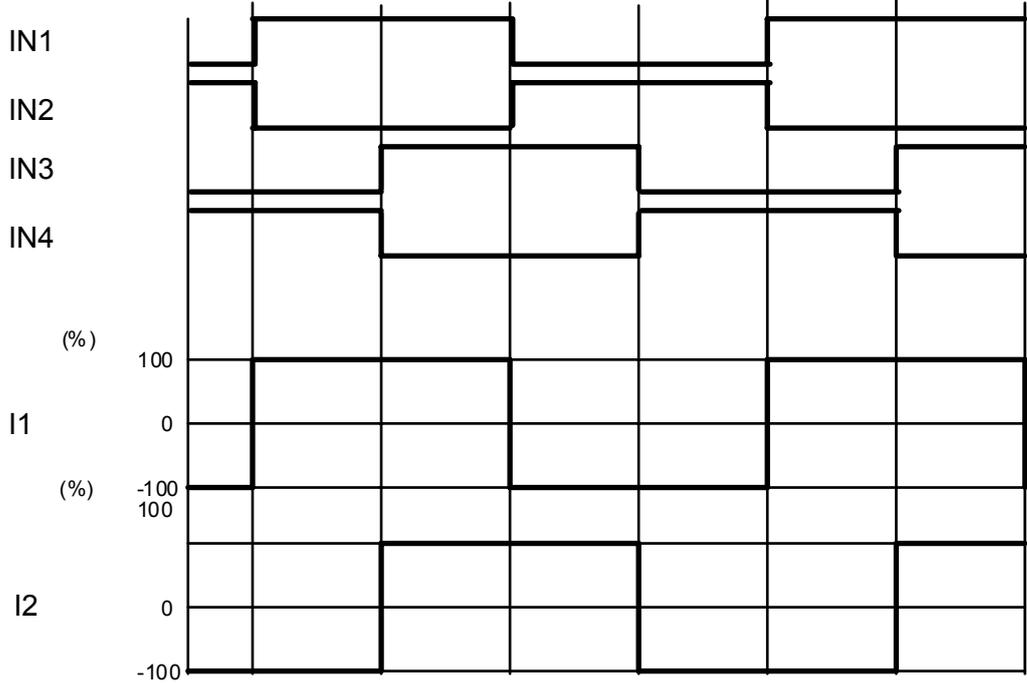

| Input signal | | | | Output | | | | Mode |
|--------------|-----|-----|-----|--------|-------|-------|-------|---------------|
| IN1 | IN2 | IN3 | IN4 | OUT1A | OUT1B | OUT2A | OUT2B | |
| L | L | - | - | OFF | OFF | - | - | Standby |
| H | L | - | - | H | L | - | - | CW (Forward) |
| L | H | - | - | L | H | - | - | CCW (Reverse) |
| H | H | - | - | L | L | - | - | Brake |

| H | L | L | L | High | Low | Off | Off | - | Step 8 |

4. Typical current waveform in each excitation mode.

Full step (CW mode)

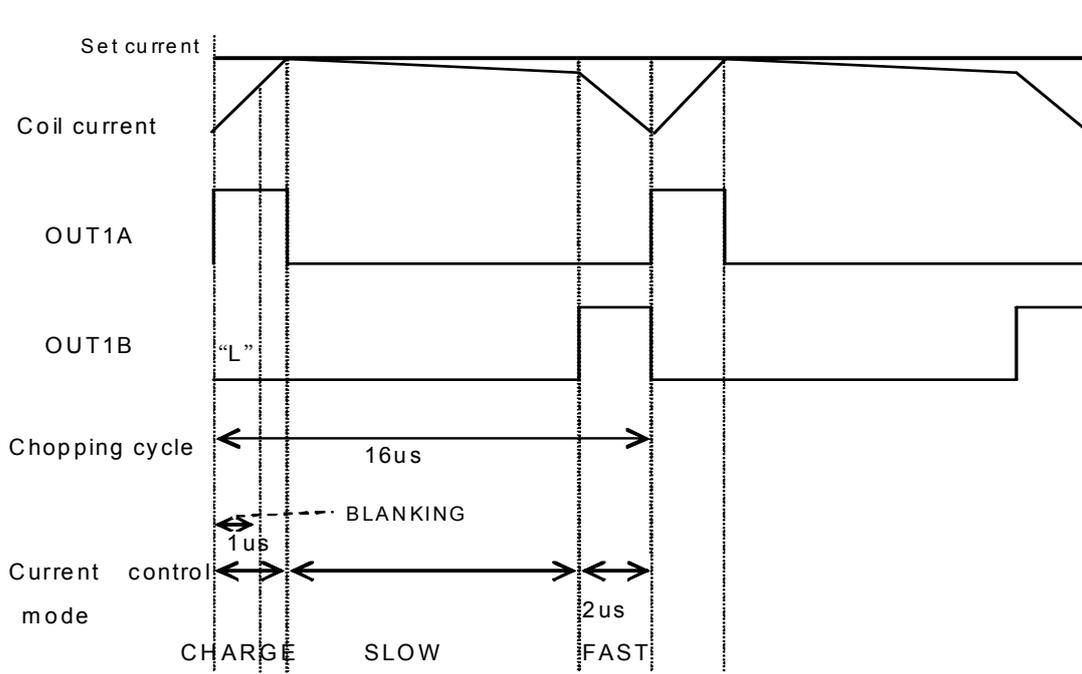

Half step full torque (CW mode)

5. PWM constant-current control

LV8716QA performs constant current control of coil current by PWM chopping of the output pin, as opposed to the output detection current set up by connecting external resistance to RCS pin.

(Constant-current control time chart)

Detection current setting method

For setting the output current are as follows:

IC internal reference voltage ($V_{ref} = 0.2V$), between RCS pin and GND pin connecting resistance is RCS.

$$I_{out} = 0.2V/RCS \times 4000$$

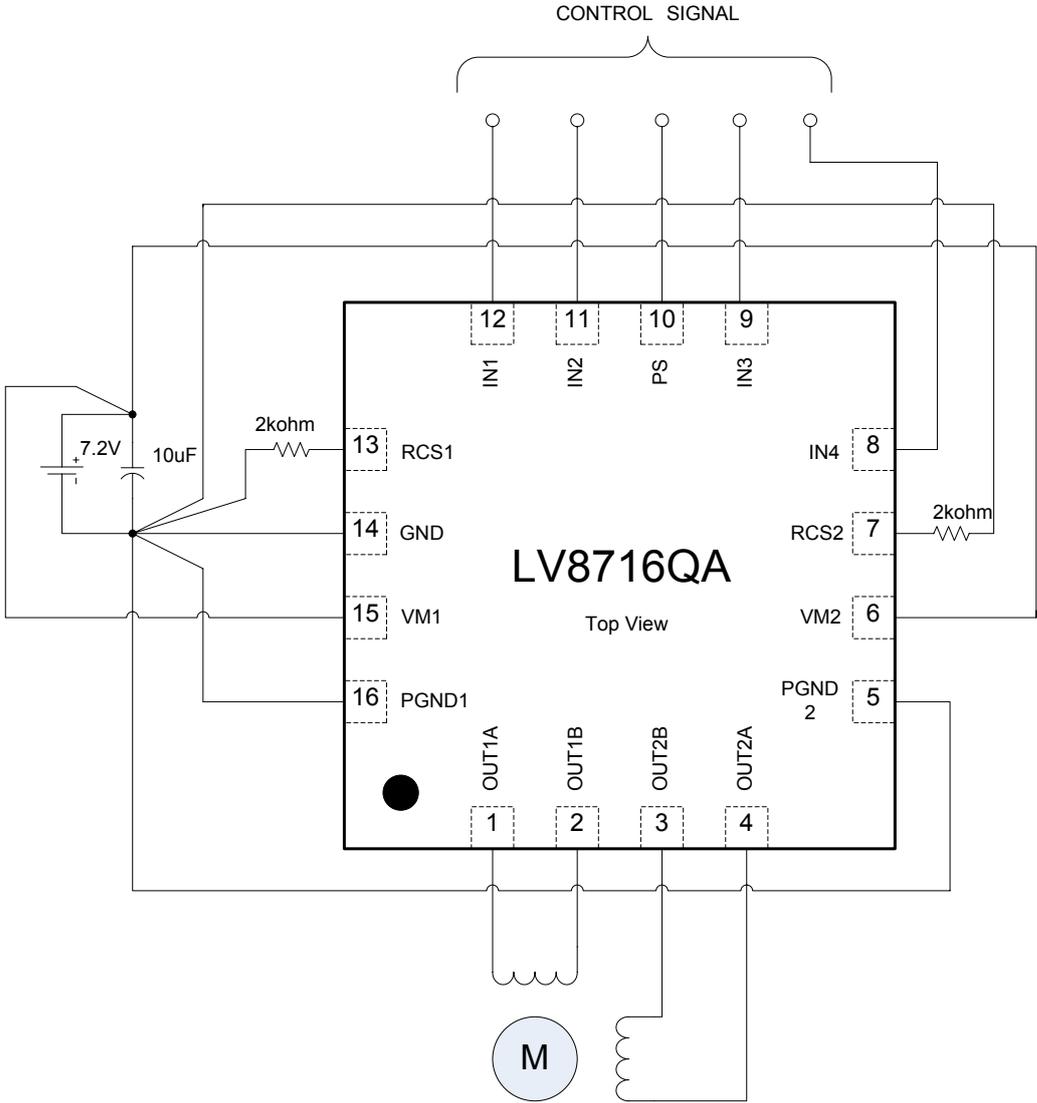

e.g. $RCS = 2k\Omega$

$$I_{out} = 0.2V/2k\Omega \times 4000 = 0.4A$$

LV8716QA

6. Application Circuit Example

6-1) Stepper motor driver circuit

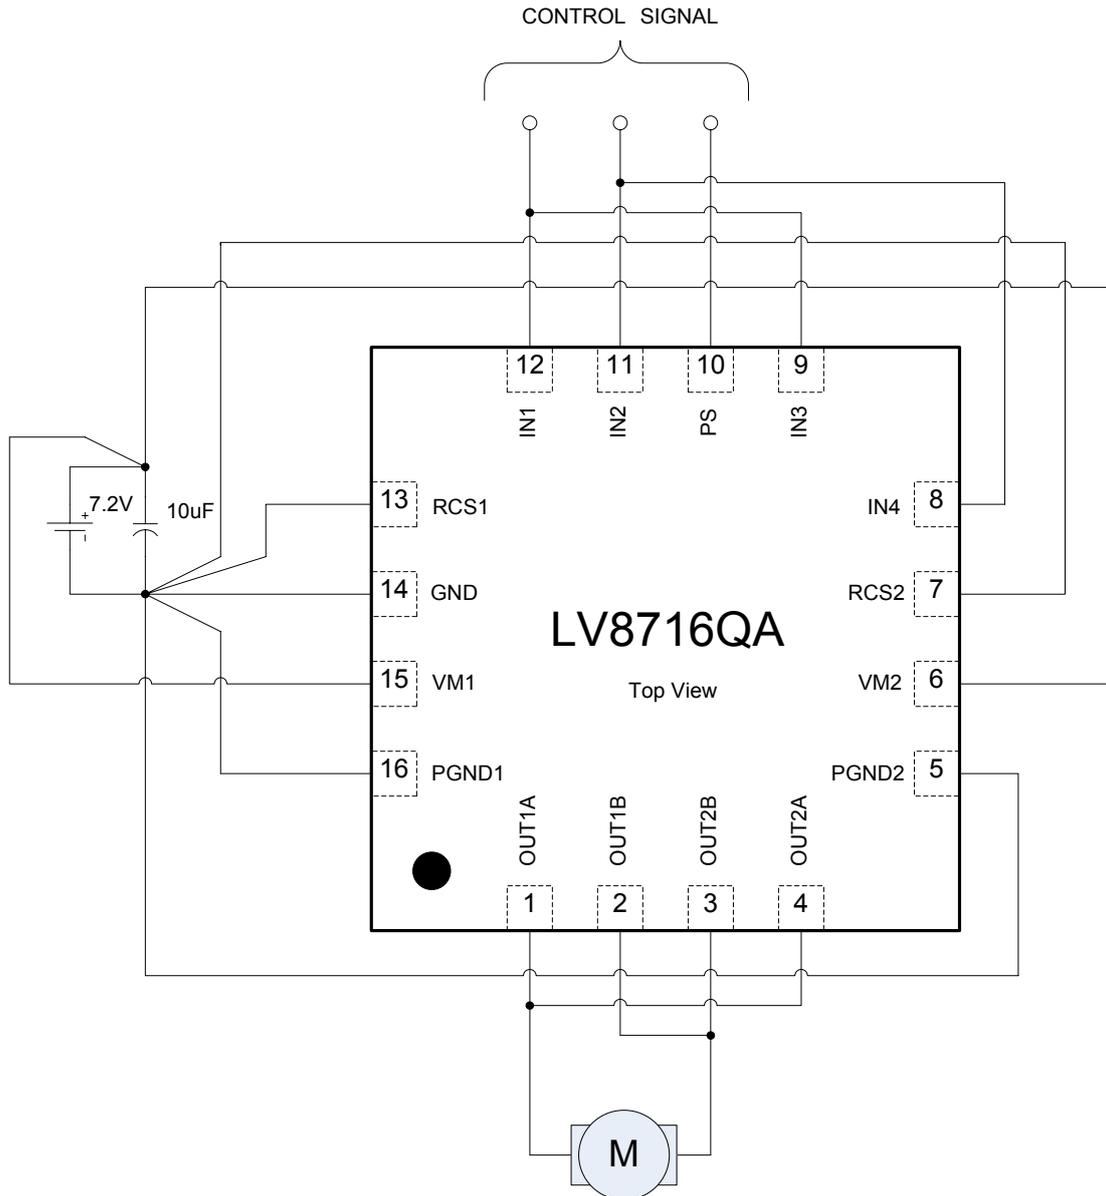

The formulae for setting the PWM constant current above is as follows :

$$I_{out} = 0.2 / 2k\Omega \times 4000 = 400mA \quad (RCS=2k\Omega)$$

LV8716QA

6-2) High current DC motor driver circuit

LV8716QA can drive a large current DC motor by connecting two H-bridges to parallel.

$$I_{\text{max}} = 2\text{A}$$

$$I_{\text{max}} = 3\text{A} \text{ (} t_w \leq 10\text{ms)}$$

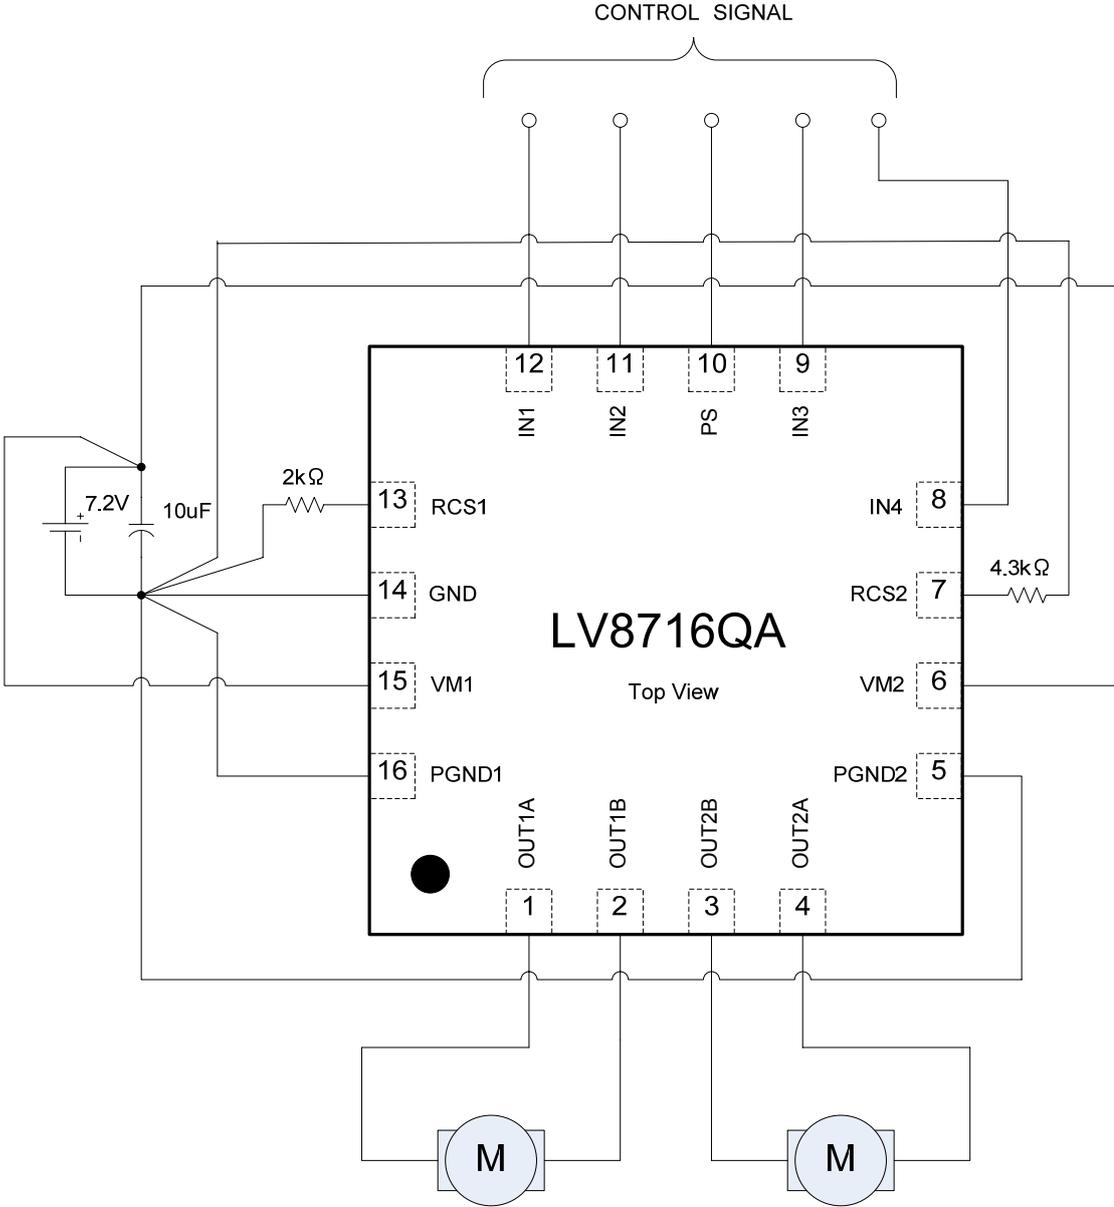

When it connects H-bridge to parallel,

LV8716QA cannot use the internal PWM constant current control function.

Please connect the RCS pin to GND.

LV8716QA

6-3) 2ch DC motor driver circuit

The formulae for setting the PWM constant current above is as follows :

When $RCS1 = 2k\Omega$, $RCS2 = 4.3k\Omega$

$$I_{out} = 0.2/2k\Omega \times 4000 = 400mA$$

$$I_{out} = 0.2/4.3k\Omega \times 4000 = 186mA$$
