Installation and Service manual

Installation:

1. The TE assembly is mounted in a cabinet with "Warm sidemounted externally.
2. Suitable cabinet cutout is 155x352 mm.
3. Recommended for general purposes: the TE assembly is fastened with 8xM5 machine screws, 8x M5 flat washers, 8x M5 tooth washers and 8x M5 nuts so that the gasket material will seal off around the flange of the assembly.
- 4. The TE assembly must be positioned in vertical direction (heat sink fins in vertical direction).**
5. The TE assembly must be protected from external force or violence.
6. Fuse should be placed on the incoming wires by the customer.
20 A, Fast acting or Very Fast Acting, enhanced breaking capacity. The fuse should withstand $1.3 \times I_n$ for a minimum of 60 seconds.
External fuse must protect the input power lines.

Service:

Fan impellers and heat sinks must be cleaned on regular intervals to reduce risk for overheating and reduction of cooling function. The interval may vary depending on environment.
