

G120 Module Specifications

G120 Module is a surface-mount System on Module (SoM) that runs .NET Micro Framework software platform; a tiny version of Microsoft .NET framework. The value of G120 Module is not only in the hardware capabilities such as the Cortex-M3 processor, memory and peripherals, but also is in the integration between the hardware and the embedded software. This provides high level features such as FAT file system, TCP/IP stack, Graphics and Threading through .NET APIs. Furthermore, the embedded software includes GHI Electronics' extensions such as WiFi, USB Host, SQLite, PPP, and In-Field Update. All are provided royalty-free with the G120 Module.

Benefits

Key Features

NXP LPC17xx Cortex-M3 120MHz Processor
16Mbytes of RAM
4.5Mbytes of Flash
Embedded LCD Controller
USB Host/Device with drivers
4-bit SD card interface

Plenty of essential peripherals such as GPIO, SPI, UART, I2C, CAN, ADC, DAC and PWM.
High level features such as file system, networking (Ethernet & WiFi), PPP, SQLite database, and Graphics.
Low profile SMT SoM
Supports Visual C# and Visual Basic programming languages

Applications

- Graphical Human Machine Interface
- Data Logger
- Hand held testers
- Internet of things applications
- Networked alarm systems
- Automation applications
- Controllers, Robotics

Specifications

Package	SMT Module 91 pins
Dimensions WxLxH mm	26.67 x 38.1 x TBA
Processor	120MHz 32-bit ARM Cortex-M3
FLASH Available/Free	4.5MB/3.5MB
RAM Available/Free	16MB/14MB
Color TFT Display Controller	Available
Graphics (font/controls)	Complete
Image Decoder	BMP, GIF, JPG
Native Networking Support	Ethernet/WiFi with SSL
Programmable IOs	72
PWM	12
Analog Input	8
Analog Output	1
UART (COM)	5
SPI	3
I2C	Available
CAN	2
One-wire	Supported on all IOs
USB Host	HID, Mass Storage, CDC, Webcam, Raw
USB Client	HID, Mass Storage, CDC, Raw
4bit SDHC/SD/MMC	Supported
Real Time Clock	Available
Piracy Protection	Available
In-Field Update	Available
Operating Temperature	-40° to +85°
Lead Free	Yes
RoHS Compliant	Yes
Load native C/assembly	Runtime Loadable Procedures

46		VCC 3.3V

* Open drain ports

** Pin 59 P1_30 AD4/COM4 OE must NOT be grounded on power-up for GHI Bootloader to function correctly.

GPIOs P0_x and P2_x are Interrupt Capable.

All pins are 5V tolerant.

G120HDR Module

For convenience, the G120 module is offered in a through-hole version. All signals are exposed on header placements, including display signals. The module only needs 3.3V to operate.

The module also brings the display signals and USB Client to .NET Gadgeteer sockets. This provides an easy way to add one of the Gadgeteer displays and also makes an easy way to add power supply and USB connector through one of the USB client power modules.

For additional flexibility, two .NET Gadgeteer sockets are exposed to pads allowing developers to wire these sockets to any signal which in turn allow the use of one or more .NET Gadgeteer modules. While the G120HDR module was designed as an evaluation tool for the G120 System-On-Module it is not recommended for users inexperienced with .NET Micro Framework; the GHI Electronics's "FEZ" line of .NET Gadgeteer mainboards is recommended for learning .NET Gadgeteer and .NET Micro Framework.
