

Long Range Fixed Timer

The ICM7242 is a CMOS timer/counter circuit consisting of an RC oscillator followed by an 8-bit binary counter. It will replace the 2242 in most applications, with a significant reduction in the number of external components.

Three outputs are provided. They are the oscillator output, and buffered outputs from the first and eighth counters.

Ordering Information

PART NUMBER	PART MARKING	TEMP. RANGE (°C)	PACKAGE	PKG. DWG. #
ICM7242IPA	7242 IPA	-25 to +85	8 Ld PDIP	E8.3
ICM7242IPAZ (See Note)	7242 IPAZ	-25 to +85	8 Ld PDIP** (Pb-free)	E8.3
ICM7242CBAZ*	7242 CBAZ	0 to +70	8 Ld SOIC (Pb-free)	M8.15
ICM7242IBAZ*	7242 IBAZ	-25 to +85	8 Ld SOIC (Pb-free)	M8.15

*Add "-T" suffix for tape and reel.

**Pb-free PDIPs can be used for through hole wave solder processing only. They are not intended for use in Reflow solder processing applications.

NOTE: Intersil Pb-free plus anneal products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate termination finish, which are RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020

Features

- Replaces the 2242 in Most Applications
- Timing From Microseconds to Days
- Cascadable
- Monostable or Astable Operation
- Wide Supply Voltage Range 2V to 16V
- Low Supply Current 115µA at 5V
- Pb-Free Plus Anneal Available (RoHS Compliant)

Pinout

Functional Block Diagram

Absolute Maximum Ratings

Supply Voltage (V_{DD} to V_{SS}) 18V
 Input Voltage (Note 1)
 Terminals (Pins 5, 6, 7, 8) ($V_{SS} - 0.3V$) to ($V_{DD} + 0.3V$)
 Continuous Output Current (Each Output) 50mA

Operating Conditions

Temperature Range
 ICM7242I -25°C to +85°C
 ICM7242C 0°C to +70°C

Thermal Information

Thermal Resistance (Typical, Note2) θ_{JA} (°C/W)
 PDIP Package* 100
 SOIC Package 160
 Maximum Storage Temperature Range -65°C to +150°C
 Maximum Junction Temperature (Plastic Package) +150°C
 Pb-free reflow profile see link below

<http://www.intersil.com/pbfree/Pb-FreeReflow.asp>
 *Pb-free PDIPs can be used for through hole wave solder processing only. They are not intended for use in Reflow solder processing applications.

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

- Due to the SCR structure inherent in the CMOS process, connecting any terminal to voltages greater than V_{DD} or less than V_{SS} may cause destructive device latchup. For this reason, it is recommended that no inputs from external sources not operating on the same supply be applied to the device before its supply is established and, that in multiple supply systems, the supply to the ICM7242 be turned on first.
- θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

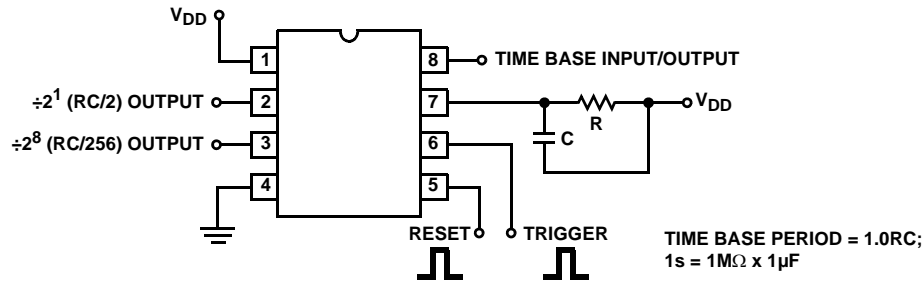

Electrical Specifications $V_{DD} = 5V$, $T_A = +25^\circ C$, $R = 10k\Omega$, $C = 0.1\mu F$, $V_{SS} = 0V$, Unless Otherwise Specified

PARAMETER	SYMBOL	TEST CONDITIONS	MIN	TYP	MAX	UNITS
Guaranteed Supply Voltage	V_{DD}		2	-	16	V
Supply Current	I_{DD}	Reset	-	125	-	μA
		Operating, $R = 10k\Omega$, $C = 0.1\mu F$	-	340	800	μA
		Operating, $R = 1M\Omega$, $C = 0.1\mu F$	-	220	600	μA
		TB Inhibited, RC Connected to V_{SS}	-	225	-	μA
Timing Accuracy			-	5	-	%

		50% Duty Cycle Input with Peak to Peak Voltages Equal to V_{DD} and V_{SS}				
Output Saturation Voltage	V_{SAT}	All Outputs Except TB Output $V_{DD} = 5V$, $I_{OUT} = 3.2mA$	-	0.22	0.4	V
Output Sourcing Current	I_{SOURCE}	$V_{DD} = 5V$ Terminals 2 and 3, $V_{OUT} = 1V$	-	300	-	μA
MIN Timing Capacitor (Note 3)	C_T		10	-	-	pF
Timing Resistor Range (Note 3)	R_T	$V_{DD} = 2 - 16V$	1k	-	22M	Ω

NOTE:

- For design only, not tested.

Test Circuit

NOTE:

4. $\div 2^1$ and $\div 2^8$ outputs are inverters and have active pullups.

Application Information

Operating Considerations

Shorting the RC terminal or output terminals to V_{DD} may exceed dissipation ratings and/or maximum DC current limits (especially at high supply voltages).

There is a limitation of 50pF maximum loading on the TB I/O terminal if the timebase is being used to drive the counter section. If higher value loading is used, the counter sections may miscount.

For greatest accuracy, use timing component values shown in Figure 8. For highest frequency operation it will be desirable to use very low values for the capacitor; accuracy will decrease for oscillator frequencies in excess of 200kHz.

The timing capacitor should be connected between the RC pin and the positive supply rail, V_{DD} , as shown in Figure 1. When system power is turned off, any charge remaining on the capacitor will be discharged to ground through a large internal diode between the RC node and V_{SS} . Do NOT reference the timing capacitor to ground, since there is no high current path in this direction to safely discharge the capacitor when power is turned off. The discharge current from such a configuration could potentially damage the device.

When driving the counter section from an external clock, the optimum drive waveform is a square wave with an amplitude equal to the supply voltage. If the clock is a very slow ramp triangular, sine wave, etc., it will be necessary to "square up" the waveform; this can be done by using two CMOS inverters in series, operating from the same supply voltage as the ICM7242.

The ICM7242 is a non-programmable timer whose principal applications will be very low frequency oscillators and long range timers; it makes a much better low frequency oscillator/timer than a 555 or ICM7555, because of the on-chip 8-bit counter. Also, devices can be cascaded to produce extremely low frequency signals.

Because outputs will not be ANDed, output inverters are used instead of open drain N-Channel transistors, and the

external resistors used for the 2242 will not be required for the ICM7242. The ICM7242 will, however, plug into a socket for the 2242 having these resistors.

The timing diagram for the ICM7242 is shown in Figure 1. Assuming that the device is in the RESET mode, which occurs on power up or after a positive signal on the RESET terminal (if TRIGGER is low), a positive edge on the trigger input signal will initiate normal operation. The discharge transistor turns on, discharging the timing capacitor C, and all the flip-flops in the counter chain change states. Thus, the outputs on terminals 2 and 3 change from high to low states. After 128 negative timebase edges, the $\div 2^8$ output returns to the high state.

Dual-In-Line Plastic Packages (PDIP)

NOTES:

1. Controlling Dimensions: INCH. In case of conflict between English and Metric dimensions, the inch dimensions control.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication No. 95.
4. Dimensions A, A1 and L are measured with the package seated in JEDEC seating plane gauge GS-3.
5. D, D1, and E1 dimensions do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.010 inch (0.25mm).
6. E and e_A are measured with the leads constrained to be perpendicular to datum $-C-$.
7. e_B and e_C are measured at the lead tips with the leads unconstrained. e_C must be zero or greater.
8. B1 maximum dimensions do not include dambar protrusions. Dambar protrusions shall not exceed 0.010 inch (0.25mm).
9. N is the maximum number of terminal positions.
10. Corner leads (1, N, N/2 and N/2 + 1) for E8.3, E16.3, E18.3, E28.3, E42.6 will have a B1 dimension of 0.030 - 0.045 inch (0.76 - 1.14mm).

Small Outline Plastic Packages (SOIC)

NOTES:

1. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication Number 95.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
4. Dimension "E" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
6. "L" is the length of terminal for soldering to a substrate.
7. "N" is the number of terminal positions.
8. Terminal numbers are shown for reference only.
9. The lead width "B", as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch).
10. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.
