

AT-7000 Advanced Wire Tracer

Wire Tracing Reinvented

Get accurate results in minutes with new features and technologies that simplify wire tracing and breaker identification. The Receiver's patented Smart Sensor,™ with its innovative new antenna design and advanced signal processor, clearly displays the location and orientation of energized wires in walls, floors and ceilings on the large color TFT LCD screen. The powerful Transmitter utilizes two optimal frequencies for both energized and de-energized wire and breaker tracing, delivering consistently accurate results for novice users and experts alike. The new Scan and Locate feature clearly identifies the one correct breaker or fuse, eliminating the confusion from multiple false positive readings common in older technology tracing tools.

AT-7000-R Receiver

AT-7000 Features

- · Traces wires in walls, ceilings, floors and corners
- Locates breakers and fuses
- Pinpoints shorts and opens
- High resolution 3.5" TFT LCD color display
- · Three power modes
 - "High" power mode for normal circuits
 - "Low" power mode for precision tracing in difficult areas
 - "Clamp" power mode provides a boosted signal using signal clamp
- · Two automatically selected frequency modes for optimal tracing on energized and de-energized circuits
- Signal booster rechargeable battery pack (BR-7000-T) increases transmitter signal strength
- Clamp-on attachment (SC-7000) for inducing signal into wires without access to bare conductors
- Embedded help screens make set-up easy and error free

Tip Sensor

The shape of the tip sensor allows tracing in hard to reach areas, corners & tight spaces, as well as precise circuit breaker and fuse identification. By utilizing two different types of antennas (inductive coil and capacitive), the tip sensor enables optimal tracing results of both energized and de-energized circuits, which are automatically selected by operating mode.

Smart Sensor™

Quickly and easily determine the precise direction and location of energized wires in walls, floors and ceilings with the patented Smart SensorTM. Combined with a fast signal processor that measures small changes in the detected signal multiple times per second, this new technology provides unmatched precision and ease of use for tracing energized wires.

Signal Clamp

When there's no access to bare conductors, use the SC-7000 signal clamp to induce a signal into either energized or de-energized circuits for wire tracing and load locating. The AT-7000-T transmitter's "clamp" mode provides a boosted 6 kHz signal through the clamp to further improve accuracy and performance.

AT-7000-T Transmitter

Featuring three power modes "high", "low", and "clamp" and two output frequencies (6kHz and 33 kHz), the AT-7000-T incorporates the best technologies available for optimal wire tracing and breaker identification on both energized and de-energized circuits. The AT-7000-T automatically sets the frequency based on detected voltage, and prompts the user to set the power level based on their application. The color TFT LCD screen displays the detected voltage, frequency output and power mode.

The AT-7000 Advanced Wire Tracer is available in two feature-packed kits

Features	AT-7020 Kit	AT-7030 Kit
Traces Energized and De-Energized Wires	•	•
Locates Energized and De-Energized Breakers	•	•
Pinpoints Shorts and Opens	•	•
Three Power Modes "High" power mode for normal circuits "Low" power mode for precision tracing in difficult areas "Clamp" power mode provides a boosted induction signal via the signal clamp Two Frequency Modes for Optimal Tracing 6 kHz for energized circuits 33 kHz for de-energized circuits	•	•
 Signal Booster Rechargeable Battery Pack (BR-7000-T) Longer life LI-ION battery Recharges when AT-7000-T transmitter plugged into energized circuit Improved signal for open and energized tracing Boosted signal when in "Clamp" mode 	(optional)	•
• Clamp-on attachment for inducing signal into wires without access to bare conductors	(optional)	•

Quick and Easy Wire Tracing with the Smart Sensor™

Tracing Wires in Walls, Ceilings and Floors

Tracing wires can be a challenge. The Amprobe AT-7000 makes tracing energized wires easier and more accurate than ever before. The Smart Sensor'sTM patented sensor array and advanced signal processor provides instant feedback of wire location and direction on the large TFT LCD color display. Easily determine the direction and orientation of wires in walls, floors and ceilings up to 2 in/5 cm accuracy.

Clear and Accurate Breaker Identification

Identifying breakers and fuses

Combined with our powerful transmitter utilizing optimal frequencies for energized and de-energized tracing, the new Scan and Locate feature identifies the one correct breaker or fuse with the highest recorded signal. This eliminates the confusion from multiple false positive readings common in older technology tracing tools.

Trace energized or de-energized wires by removing the junction

Induce signal with the signal clamp when there is no bare conductor.

Use the Tip Sensor to trace wires in hard to reach areas.

Non-contact voltage (NCV) detection.

Trace wires in hard to reach places with the TIC 410A.

Trace Wires Inside Conduit

Trace energized and de-energized wires enclosed in metal conduit by removing the junction box cover and using the AT-7000-R Receiver's Tip Sensor to identify the specific wire carrying the transmitted signal generated by the AT-7000-T Transmitter. Wires in non-metal conduit can be traced directly without opening the junction box and using the AT-7000-R Receiver's Smart Sensor™.

Trace energized wires without access to exposed conductors

The SC-7000 signal clamp accessory can be used with the AT-7000-T Transmitter to induce a signal into energized and de-energized wires when there is no access to bare conductors. Simply clamp around the desired wire to induce the signal, then begin tracing.

Use the Tip Sensor to trace wires in hard to reach areas

When used with the AT-7000-T Transmitter, the Tip Sensor pinpoints the location of energized and de-energized wires in tight, hard to reach spaces. It easily and accurately traces the targeted energized and de-energized wires in junction boxes, corners, walls, floors and ceilings to a depth of up to 20 feet.

Non-contact voltage (NCV) detection

The NCV feature extends functionality of the AT-7000-R Receiver by detecting energized wires from 90 to 600 V and 40 to 400 Hz without the use of the AT-7000-T Transmitter. Its adjustable sensitivity fits a range of applications, from detecting presence of voltage (higher sensitivity) to precisely pinpointing a hot wire in a bundle (lower sensitivity).

Hot Stick attachment

The optional TIC 410A Hot Stick accessory enables easier tracing of wires in high ceilings, walls and along floors.

AT-7000 Wire Tracer Kits

	AT-7020 Kit	AT-7030 Kit	Description
AT-7000-R Receiver	•	•	Receiver unit with Smart Sensor, Tip Sensor and color TFT LCD display
AT-7000-T Transmitter	•	•	Transmitter with two transmission frequencies (6 kHz and 33 kHz) and three power modes (High, Low, Clamp)
TL-7000 Test Leads	•	•	Test Lead Set with alligator clips (Black & Red), 30 ft. grounding lead, power cord, plug adaptors and light socket adapter
CC-7000 Carrying Case	•	•	Custom Amprobe hard carrying case that securely holds transmitter, receiver, signal clamp, test leads and accessories
SC-7000 Signal Clamp	(optional)	•	Signal Clamp accessory for inducing a signal into wires without access to bare conductors
HS-1 Hanger	(optional)	•	Three-way magnetic hanger for AT-7000-T transmitter, allowing for convenient hanging of unit, placement on belt or as a stand
BR-7000-T Booster Battery	(optional)	•	Signal Booster Rechargeable Battery Pack (LI-ION, 7.2 V, 2.2 Ah), provides increased signal transmission power in High and Clamp modes
BR-7000C Battery Charger	(optional)	(optional)	External battery charger for BR-7000-T
Kit Specifications			
Kit Weight	8.95 lbs (4.06 kg)	10.30 lbs (4.67 kg)	
Case Size	16 x 13 x 7 in (40.6 x 33 x 17.8 cm)	16 x 13 x 7 in (40.6 x 33 x 17.8 cm)
