

GENERAL DESCRIPTION

The Exar XRP2523 Evaluation board (EVB) is a full assembled and tested surface-mount PCB that demonstrates the XRP2523 single-channel integrated high-side power distribution switches.

Optimized for USB V_{BUS} power distribution, the XRP2523 is compliant with the latest USB 3.0 specification and can be used in any self or bus powered USB applications. It is provided with an enable pin while an error flag is available to indicate fault conditions.

XRP2523 is offered in a RoHS compliant "green"/halogen free 5-pin SOT-23 package.

STANDARD CONFIGURATION

The XRP7659EVB evaluation board is configured to operate under the following conditions and parameters:

- Input voltage range V_{IN} : 3.2V – 6.5V
- Output current/load range: 0 – 1.5A

EVALUATION BOARD MANUAL

FEATURES

- **1.5A Single Channel Current Switch**
 - 1.5A continuous load current
 - 1.6A Over-current Limit
- **3.2V to 6.5V Input Voltage Range**
- **USB 2.0 and USB 3.0 Compliant**
- **Active High Enable**
- **Soft Start**
- **Channel Fault Flag Indicator**
 - 9ms Blanking Time
- **UVLO, Reverse Current, Short circuit and Thermal Shutdown Protection**

EVALUATION BOARD SCHEMATICS

PIN ASSIGNMENT

Fig. 2: XRP2523 Pin Assignment

PIN DESCRIPTION – XRP2523

Name	Pin Number	Description
EN	1	Channel Enable Input
GND	2	Ground Signal
FLG	3	Error Flag Signal Active low open drain output. Active on over-current, over-temperature, short-circuit or UVLO conditions.
IN	4	Voltage Input Pin
OUT	5	Voltage Output Pin

ORDERING INFORMATION

Refer to XRP2523's datasheet and/or www.exar.com for exact and up to date ordering information.

1.5A Single Channel USB 3.0 Power Distribution Switch

USING THE EVALUATION BOARD

Note: The XRP2523 evaluation board is common with Exar's XRP2524 and XRP2526 evaluation boards.

INITIAL SETUP

The Board is supplied from EXAR with the XRP2523 device. Set the input supply to a voltage between 3.2V to 6.5V and connect it to VIN and GND connectors on the right side of the evaluation board.

Enable pin must be pulled up HIGH to enable the IC. Connect the load to the VOUT and

PGND connectors on the right hand side of the board.

Flag pin is pulled up to VIN through a 10kΩ resistor (provided by default on the board) or can be instead connected to a separate external power supply voltage VLA.

The board will power-up upon turning on the input supply and reach the desired output voltage. The board can operate with a load current I_{OUT} of up to 1.5A.

TYPICAL PERFORMANCE CHARACTERISTICS

All data taken at $V_{IN} = 5V$, $C_{IN} = 1\mu F$, $C_{OUT} = 22\mu F/0.1\mu F$, $T_J = T_A = 25^\circ C$, unless otherwise specified - Schematic and BOM from Application Information section of this datasheet.
