

BLED112 Bluetooth® Smart USB Dongle

Table of Contents

- Key Features
- Benefits
- BLED112 Overview
- Certifications

Key Features

Bluetooth v.4.0, single mode compliant

- Supports master and slave modes
- Up to 8 connections

Integrated Bluetooth Smart stack

- GAP, GATT, L2CAP and SMP
- Bluetooth Smart profiles

Radio performance

- Transmit power : +0 dBm
- Receiver sensitivity: -93dBm

USB host interface

- Supports USB/CDC (virtual COM port)
- Programmable 8051 processor for stand-alone operation
- Bluetooth, CE, FCC, IC, Japan and South-Korea qualified

Benefits

Integrated Bluetooth stack

- No Bluetooth stack needed on the host
- Operating system independent

Wide Operating System support

- Windows®
- Linux
- MAC OS
- Android

BGAPITM software interface

An OS independent API between the dongle and the host

On-dongle applications

- Developed with simple BGScriptTM scripting language
- Enables stand-alone operation

Bluetooth, CE, FCC, IC, South-Korea and Japan qualified

- Proven interoperability
- No qualification costs

BLED112 Overview

Bluetooth low energy radio

Frequency: 2402 – 2480 MHz

TX power: 0 dBmRX sensitivity: -93 dBm

Modulation: GFSKSymbol rate: 1 Mbps

Antenna

Integrated PCB antenna

Typical line of sight range:

- +0dbm: 20-40 meters

- -20 dBm: ~5 meters

BLED112 Overview

A programmable 8051 microcontroller

- Architecture
 - 8-bit, 8051 architecture
- SRAM
 - -8kB
- Flash
 - 128kB

Bluetooth v.4.0, single mode compliant

- Supports master and slave modes
- Up to 8 simultaneous connections

Implements all Bluetooth Smart functionality

- GAP, L2CAP, ATT, GATT
- Security manager: bonding, encryption
- Bluetooth Smart profiles

Simple API for external host processors

- BGAPI[™]: A simple protocol over UART or USB interfaces
- BGLib™: A C library for host processors implementing BGAPI

Supports standalone applications as well

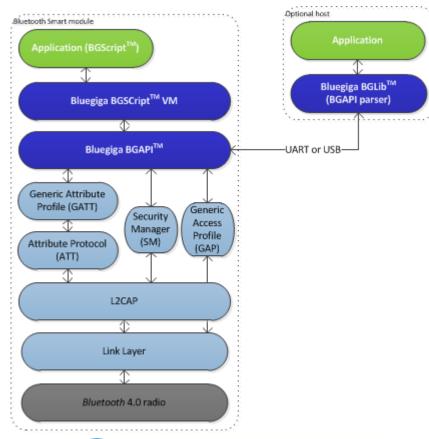

- BGScript™: A simple scripting language for writing applications
- No separate host needed

Blutoooth Smart Profile Toolkit[™]

- XML based development tool for Bluetooth Smat profiles
- Fast and simple profile development

Small memory requirements

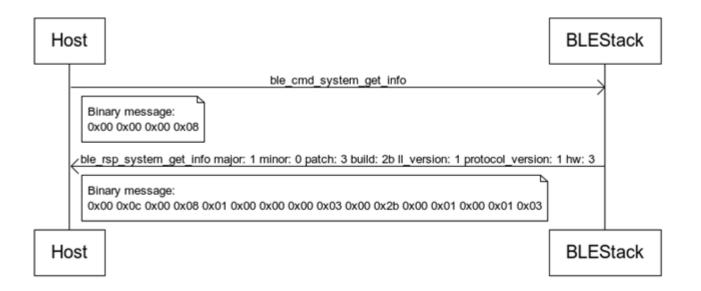

- ~4kB RAM
- ~70kB flash (depending of used features/profiles)
- Bluetooth qualified

- BGAPITM protocol : A simple binary command, response and event protocol between the host and the stack
 - Used when a separate host (MCU) is used to control BLED112 over USB
 - Very small memory requirements size requirement and low implementation overhead

- BGLib™ library: A portable ANSI C library, which implements the BGAPI protocol
 - Easy to port to various architectures such as: ARM Cortex, PIC16/32 etc.
 - Uses fuction—call back architecture

```
C Functions
/* Function */
void ble_cmd_gap_connect_direct(
    bd_addr address ,
    uint8 addr_type ,
    uint16 conn_interval_min ,
    uint16 timeout
);

/* Callback */
void ble_rsp_gap_connect_direct(
    uint16 result ,
    uint8 conn
);
```

- BGScript™ scripting language : A very simple BASIC-like application scripting language
 - Used when applications are implemented on the BLED112's 8051 controller
 - Enables very fast application development and allows programs to be executed directly on the BLED112 without the need of an external MCU

```
# System boot event listener: Executed when BLE112 is started

event system_boot (major ,minor ,patch ,build ,ll_version ,protocol_version ,hw )

# Configure ADV interval to 1000ms and start advertisements an all channels

call gap_set_adv_parameters (1600, 1600, 7)

# Start generic advertisement and enable connections

call gap_set_mode (2,2)

#Start a continuous software timer, which generates interrupts every 1000ms

call hardware_set_soft_timer (32768, 1, 0)
end
```

- Why to use BGScript™?
- Very simple to use
 - Fast development of simple Bluetooth Smart applications
 - Examples: Pairing, simple user interfaces, simple sensors
- Free software development tools
 - Code developed with any text or source code editor
 - Code compiled with Bluegiga's free compiler
- Several example scripts available
 - Heart Rate sensor
 - Proximity reporter
 - FindMe tag
 - Medical devices such as blood glucose
- Cuts out the need for external MCU
 - Reduced product eBoM
 - Smaller footprint
 - Faster time-to-market

- Bluetooth Smart Profile Toolkit™: A tool for creating Bluetooth Smart profiles
 - Bluetooth Smart profiles are very simple
 - Can be describes with a single file of XML
 - Profile toolkit is a Simple description language of Bluetooth Smart Profiles
- Several example profiles and services available
 - Heart Rate Sensor
 - Proximity Reporter
 - FindMe
 - Blood glucose

```
<?xml version="1.0" encoding="UTF-8" ?>
- <configuration>
 + <service>
 - <service>
     <uuid>3a00</uuid>
     <description>Heartrate Service</description>
   - <characteristic id="heartrate">
     <properties>
         <read />
         <notify />
       </properties>
       <uuid>3a01</uuid>
       <value type="UINT8" />
       <description>Beats per minute</description>
     </characteristic>
   - <characteristic id="rr interval">
     + properties>
       <uuid>3a02</uuid>
       <value type="UINT16" />
       <description>R-R Interval</description>
     </characteristic>
   - <characteristic>
       <uuid>3a03</uuid>
     + properties>
       <value type="SFLOAT" unit="kJ" />
       <description>Energy Expended</description>
     </characteristic>
   - <characteristic>
       <uuid>3a04</uuid>
     + cproperties>
       <value type="UINT8" />
       <description>Sensor Status</description>
     </characteristic>
   + <characteristic type="aggregate">
   </service>
 </configuration>
```

Certifications

BLED112: Controller subsytem

Software : Host subsystem

- CE
 - EN300328
 - EMC330489

- FCC
 - FCC Modular approval
- Industry Canada
 - IC modular certification

- KCC certification
- Japan
 - ARIB-STD-66
