Q SEVEN

XTX
eXpress Technology for ETX

EMBEDDED COMPUTING
HIGHLIGHTS

congatec AG is the **preferred global vendor** for innovative **embedded solutions** to enable competitive advantages for our customers.

Letter from the CEO

On our way to market leadership

congatec AG, headquartered in Deggendorf, Germany, is a leading provider of computer-on-modules solutions for the Qseven, COM Express, XTX and ETX standard form factors. congatec products can be deployed in highly varied industrial areas and applications such as industrial automation, medical technology as well as the aerospace and communication sectors. Besides computing solutions based on the newest x86 and ARM technology, uniquely BIOS features and related driver and board support packages form congatec's core expertise and technical know-how. Our customers enjoy extensive product lifecycle management right from the design-in phase. Specialized service providers manufacture our modules using the most up-to-date quality standards.

Since the company's inception in December 2004, congatec AG has established itself as a globally recognized expert and reliable partner for embedded computer-on-modules solutions, coupled with excellent service and support. We have secured second ranking worldwide in our market segment within the space of just eight years after our founding thanks to our clear focus.

congatec has already ranked among the Deloitte Technology Fast 50 for the second consecutive year[1]. This award distinguishes Germany's highest-growth technology companies. As a result of this success, congatec is constantly confronted by the challenge of rapidly adapting its internal structures to new circumstances on the market and also within the company, in order to remain on its sustainable growth path in the future.

Since Japan is one of congatec's most important sales markets in Asia, we opened a branch in Tokyo in 2012. Major customers in this region can now be serviced directly as a consequence. This not only creates benefits for our Japanese customers but also for globally operating major customers. The visibility of the congatec brand was also further optimized through strengthening our marketing activities in Japan.

Moreover, we bolstered our sales presence in Australia and New Zealand through opening a new branch in Queensland. The Australian market offers great potential, especially in the segments of entertainment (gaming), agricultural technology, transportation management and medical technology, where congatec products can be deployed optimally.

Following the opening of the branches in Japan Australia, congatec is now represented with six branches on four continents – Asia (Taiwan and Japan), Australia, Europe (Germany and the Czech Republic), as well as North America (USA). This consistent expansion together with our strong partner network secures close customer relationships for us worldwide.

We will continue to focus on efficiency enhancement through optimizing processes and structures in the future. Through close co-operation with our technology partners Intel, AMD, Freescale and Adeneo Embedded, congatec continued to prove its leading position in technology and product innovations in 2012. In order to push further ahead with our growth strategy, we will offer products based on ARM processes and "Modules Plus" as a further service for our customers. This is just one example of new product and support initiatives that congatec is

adopting in order to not only offer benefits for customers, but also to further tap target markets.

This would all be impossible without our employees' commitment. I would like to take this opportunity to again express my thanks to all congatec employees. In the passion with which they pursue their daily activities, and through customer-orientation, creativity and team spirit, they have already brought the company to a leading position, and, together with the company's management, continue to stand for a sustainable and partnership-based corporate culture.

At the same time, I would also like to thank our customers and business partners for the confidence they invest in congatec, and for their loyalty and cooperative joint work.

Gerhard Edi, Chief Executive Officer

The congatec rhythm is the driving force behind innovation and technology for embedded computer modules.

Economical Principal

congatec products and technologies offer innovative solutions for the commercial and industrial use of embedded computer technology.

Module Know-How

The congatec engineering teams are committed to embedded module technology. This vast amount of knowledge allows for superior hardware and software support for our customers.

Quality

congatec AG is certified in compliance with ISO9001. All congatec products are made to meet the highest quality standards.

Software and Driver Support

congatec offers advanced Board-Support-Packages, which include both the latest tested drivers from silicon vendors and the congatec specific drivers for accessing all of our additional embedded module features.

BIOS Expertise

congatec has an experienced engineering staff for BIOS UEFI and board controller firmware development. The congatec implementations expands the functionality to enable professional industry applications.

System Integration

When designing a system, special attention must be paid to issues such as heat dissipation, electrostatic / electromagnetic compatibility, signal compliance, mechanical system design, and etc.

By using congatec products, you gain access to congatec's experience, which will help you deal with these issues. You can also opt to utilize our Module+ program to out-source single engineering tasks or a complete system design to congatec.

Design-In Support

The congatec teams are committed to provide the best design-in support to customers. This enables a perfect fit of the congatec Computer-On-Modules to the customer's carrier boards.

Lifecycle Support

congatec offers life cycle support for the complete lifetime of the product. congatec pays close attention to component life cycles in order to provide advanced end-of-life product notifications.

In addition, congatec focuses on efficient processing of repairs including, when applicable, replacement modules.

Focussing on core competencies

Embedded computing is congatec's passion. The clear focus on Computer-On-Modules results in a high degree of specialization for the experienced congatec employees. Accessing this power and industry knowledge allows for customers to focus on their special application know-how and industries.

Intertek

Embedded computer modules are small computer boards that can be integrated into almost any application without a cable connection. Embedded computer modules are used when standard single board computers are not suitable for mechanical reasons or due to a lack of expandability.

The difference between boards and modules

Embedded computer modules are small computer boards that can be integrated in almost every application without a cable connection. All signals are transmitted via industrial board-to-board connectors to a customer- or application-specific carrier board. This carrier board contains all the hardware expansions and also allows the cable-less interface distribution.

Scalability

congatec offers modules from the lowest of power consumption up to the highest of computing performance. Not only is the computer performance scalable, but so is the interface configuration. The large product selection at congatec allows you to get precisely the required performance and interface configuration required for your application.

Cooling

A heatspreader serves as a thermal interface between the embedded computer module and the cooling solution of the system. Thus, e.g. the excess heat can be passed directly to the system housing. The heatspreader is defined in the COM specification and is uniformly implemented for all modules. The heatspreader for high performance modules utilize a congatec patented heatpipe system in order to boost cooling performance and system reliability.

Economical

By avoiding expensive and sensitive cable connections, solutions based on embedded computer modules provide optimal cost and reliability, even for mid-sized quantities.

Customer Specific Solution

The carrier board contains all of the special functionalities required by the corresponding embedded application. These functionalities can include special interfaces, a unique power supply, as well as the mechanical design and connector placement. The embedded computer module itself is plugged into the carrier board like a component. This "super component" represents a complete computer that provides the intelligence to the application.

Flexible and robust mechanical solutions

Computer-On-Modules allow for very compact solutions. Because the modules are firmly screwed down, solutions are possible even for the most difficult environmental conditions.

Long-term availability

The excellent long-term availability of all congatec modules is further extended as a result of the clearly defined module interface. As new silicon platforms are released into the marketplace, a next-generation computer module will be there to continue the life-cycle of your product. Additional End-Of-Life services allow for a smooth phase out and replacement strategy.

Minimized development risk

The complexity of carrier board development is significantly reduced when embedded computer modules are used. With lower complexity, the probability of error is naturally lower as well. This means the cost and time frame of the project can be met with a significantly lower risk.

Time-to-market

With a module-based solution, a complex CPU board design with accompanying BIOS / UEFI development is not necessary. Module-based solutions therefore offer a significantly faster time-to-market for the final product. To accelerate the time-to-market even further, congatec offers complete starter kits. The starter kits allow hardware and software development to get started prior to having the production-based carrier board completed. Appropriate board support packages for all standard operating systems provide an additional head start.

Lower Costs

COMs save money. The cost of the development and end product are dramatically reduced. This holds true for the product's entire life-cycle. COMs provide a cost advantage from the very start.

- Lower engineering cost
- Lower product cost
- Lower cost of life cycle management

Reduced Risk

COMs minimize risk. Basic changes during the design phase, or in the middle of a product's life cycle, are easily managed. Simply plug in the next-generation COM module and continue. COMs allow for easy upgrades.

- Lower design risk
- Lower transition risk

Improved Flexibility

COMs are flexible and can meet all performance requirements. The modules support a wide range of performance up to the Intel® Core™ i7 processor, as well as future architectures. The COM standards are well established and are already prepared for the future.

- Scalability
- Performance upgrades are easy
- Technology upgrades are easy

Time-To-Market Advantage

COMs put you in a leading position. The use of customized carrier boards reduces necessary engineering effort by separating your design work from the embedded PC technology. Use COMs in your design and you can stay focused on your own core competency.

- Faster time to market
- Faster engineering
- Faster reaction time to market changes
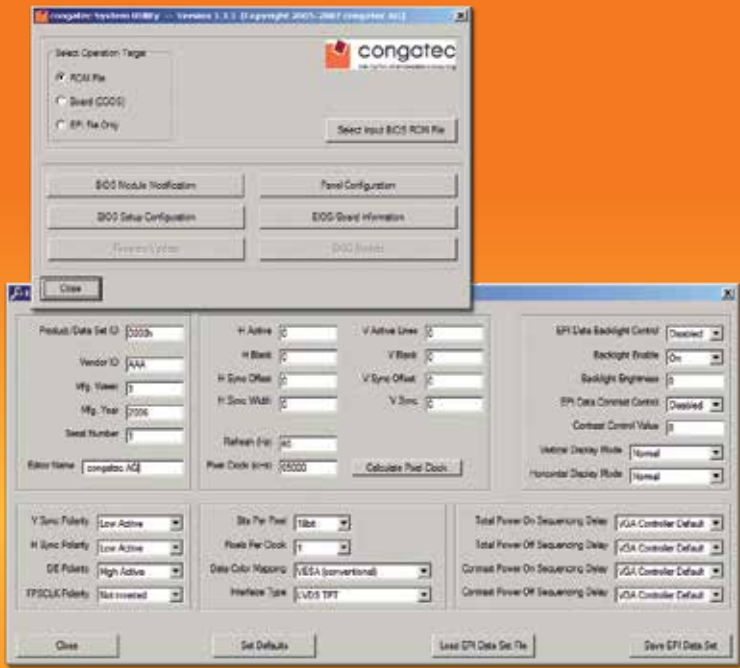

congatec System Utility
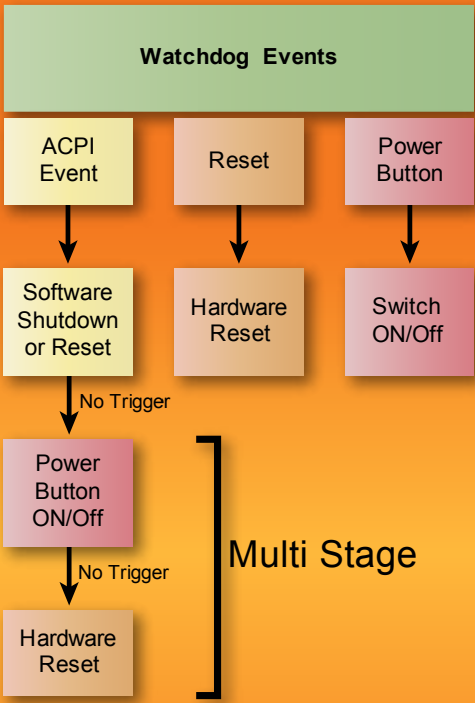

Multi Stage Watchdog Timer

Embedded computer users usually require more than the standard functionality of an office computer. congatec has taken these requirements into account when designing BIOS / UEFI functionalities. Based on our large amount of BIOS and UEFI experience, we have implemented the embedded requirements into our powerful congatec BIOS / UEFI platform.

Optimized Power
ACPI Power Management and System Configuration is supported by the congatec BIOS/UEFI according to the ACPI specification.

Multi Stage Watchdog Timer
All congatec modules are equipped with a multi stage watchdog timer supporting different events such as ACPI event, hardware reset or power button. It can either assert a single event and/or any combination of these events.

congatec Board Controller
An onboard µc fully isolates some of the embedded features, such as system monitoring or the I²C bus, from the x86 core architecture. This results in higher embedded feature performance and higher overall system reliability.

Fast Mode I²C Bus
The I²C Bus is a simple serial bus interface often used for sensors, converters or data storage in embedded applications. All congatec modules offer a 400 kHz multi-master I²C Bus that provides maximum I²C bandwidth.

BIOS Setup Data Backup
The BIOS CMOS settings are held in flash memory to allow battery-less applications.

Manufacturing Data Storage
The congatec board controller provides a rich data set of manufacturing and board information: Serial Number, Article Number, EAN Code, Manufacturing and Repair Date, System Statistics and more. The BIOS also keeps track of dynamically changing running time and boot count data. All this data is accessible by a uniform API.

User Data Storage Area
congatec modules provide 32 Bytes of non- volatile storage in the EEPROM and a 64 kByte block in the BIOS flash memory.

Hardware Monitoring
The congatec BIOS has the routines to monitor critical components implemented. Fans, operating voltages and several temperature sensors can be monitored without incurring additional development costs.

Display Auto-detection
The LVDS flatpanel can be autodetected by the BIOS via EDID support or set as fixed panel timing in BIOS setup.

OEM BIOS Logo
The BIOS can display a custom logo instead of the tradional diagnostic output during POST.

OEM Customization - Do It Yourself BIOS
The congatec embedded BIOS allows customers to do create their own BIOS binary by adding OEM code and data modules. These OEM modules help reduce the need for customized BIOS versions.

OEM BIOS Code
Customer specific code can be executed while booting the system. During power on self test (POST) the congatec BIOS can give control to customer specific code. This gives customers more flexibility to initalize special hardware extensions.

OEM CMOS Defaults
The congatec embedded BIOS allows the customer to store their own defaults in flash memory.

OEM Verb Table
To initialized HDA codecs on the carrier board from BIOS level.

OEM SLP string and OEM SLIC Table
Helps to activate licensed copies of a Windows operating system (OS) so end users of the embedded system will not have to activate the OS themselves.

OEM EDID for LVDS Panel
Create your own EDID data for any LVDS flat panel and add to the list of predefined Timings offered in the BIOS setup.

congatec System Utility
All Embedded BIOS features are accessible through the use of a congatec Windows tool. This includes all manufacturing and statistical information; e.g. serial number, running hours, boot counter etc. BIOS default settings, bootlogo and flat panel configurations can easily be programmed using this flexible and powerful tool.

32/64 Bit Uniform OS API
The congatec embedded BIOS Features are accessible through the uniform APIs EAPI (a PICMG® definition) and CGOS.
Board Support Packages
congatec offers advanced BSPs, which include both the latest tested drivers from silicon vendors and the congatec specific drivers for accessing all of our additional embedded BIOS and module features.

congatec
the rhythm of embedded computing

congatec's smart cooling pipes pave the way for unlimited performance growth for COM Express® modules

Labels (top to bottom):
- Heatpipe Chip
- Heat absorber
- Phase change material
- Coil spring
- Heatpipes CPU
- Heatspreader block
- Threaded stand-off
- Cooling fins

The new cooling system based on cooling pipes which are integrated in the standardized heatspreader of the COM Express specification. With this solution it becomes possible to cool next generation high-performance processors with a power dissipation of well over 35W TDP. The real problem are the hot spots around the processor and chipset. The congatec improved cooling concept results in a lower processor temperature, which is essential for a more frequent activation of Intel® Turbo Boost 2 Technology to ensure maximum COM performance and energy efficiency. As a result, the processor can operate at higher levels than the maximum permitted thermal design power (TDP)."

The advantages at a glance:
- Fast spot cooling for full performance
- Elimination of gap filler layer
- Elimination of mechanical stress leads to higher quality
- Better cooling extends the life span of the module
- Heat pipe principle enables innovative customer-specific cooling concepts

congatec's new heat pipe cooling design is available in different variants comprising a passive, active and customer-specific solution that creates space for innovative ideas. For example, the heat pipe can be designed in such a way that it can be connected to a customer-specific heat sink. Fanless designs are possible provided the casing is equipped with appropriately sized cooling fins. Ultimately, the design depends on the specific application. The key features of the concept are equally applicable to other electronic circuits. The new cooling solution is also ideal for systems with low power dissipation. The modules have a higher thermal reserve, which increases their life span and reliability. Average temperature reductions of 5 Kelvin can double the statistical life span – a convincing argument when considering the total cost over the lifetime of a system.
Heatspreader and passive cooling solution for Qseven®

Heatspreader

Passive cooling solution   Active cooling solution

Standard cooling solution

Heatpipe Heatspreader

Heatspreader Concept
The specifications for Qseven®, COM Express®, XTX™ and ETX® embedded computer modules include a heatspreader definition, which is the mechanical thermal interface. All the heat generated by power consuming components such as chipsets and processors is transferred to the system's cooling via the heatspreader. This can be achieved by either a thermal connection to the casing, a heat pipe or a heat sink.

Heatspreader Mounting
congatec heatspreader solution are optimized for vertically and horizontally mounted applications. All thermal stacks are fixed in place through the use of pins to ensure that there is no movement. Depending on top or bottom mounting versions with through holes or threads are available.

Cooling Solutions
Compared with sandwich-type constructions for heatspreaders and cooling systems, active and passive cooling solutions remove one layer from the process. The heatspreader and cooler are manufactured as one unit, which enables them to provide faster thermal conduction. For an active cooling solution, a high performance quiet fan has been integrated within the cooling fins.

Heatspreaders featuring Heatpipes
The congatec heatspreaders and cooling solutions for the high performance modules are featuring heatpipes in order to boost performance and reliabiltiy. A copper block is mounted on the chip to absorb heat and to mitigate the effects of thermal peaks. Between the chip and the copper block, a phase-change material is placed to improve the heat transmission. To account for different component heights and manufacturing tolerances, the copper block is spring loaded to apply an optimized pressure to the silicon dye. The copper block and the cooling fins or heat plate are connected by flexible flat heatpipes. All this results in fast spot cooling, good thermal connections, elimination of mechanical stress and greater cooling performance. This leads to while retaining geometric dimensions – achieving all these

requirements sounds like asking the impossible. However, congatec has mastered the challenge by skilfully combining the classical solution with a structurally modified heat pipe. Unlike the classical design, a flattened heat pipe is used to transfer heat from the chip to the heat spreader plate. The heat pipe is attached directly to the cooling blocks on the chip and the heatspreader plate. As a result, more heat is transported from the processor environment to the heatspreader, hot spots are cooled more quickly and the processor is cooled more optimally. Spiral springs with defined spring tension, as well as the heat pipe itself with its flexible height, put optimum pressure on the processor chip.

conga-QMX6 original size
Qseven® also supports ARM processors for mobile and ultra low power consumption applications. Unlike COM Express®, XTX™ and ETX®, it is not limited to x86 processor technology. One carrier board can be equipped with x86 or ARM Qseven® modules.

Targeting next generation ultra mobile embedded processors built using latest mobile chip technologies, the Qseven® format complements the low power and small size of these processors. By exploiting the small form factor of the industry's latest processors, the Qseven® format offers high performance computing power, delivered in a module measuring only 70x70 mm^2.
Freedom

Qseven® allows for the use of non x86 processor architectures. It supports the low power mobile ARM processor architecture. Customers have the freedom to use all kinds of Qseven® modules without the need to change the carrier board.

Mobile Applications

Qseven® is unlike previous Computer-On-Modules (COM) standards due to its primary focus being directed towards mobile and ultra mobile applications.

Low Power

Qseven® is defined for a maximum power consumption of 12 Watts. It is designed to be operated by single 5 Volt DC power and provides all additional signals for battery management. This simple power requirement allows for small mobile solutions powered by compact two cell batteries.

Connector

Unlike most previous module standards, Qseven® does not require an expensive board-to-board connector. Instead, it utilizes a very affordable MXM card slot with 230 pins in a 0.5 mm configuration.

Legacy Free

Qseven® is a legacy free standard focused on high speed serial interfaces such as PCI Express® and Serial ATA. Qseven® omits support for legacy interfaces like EIDE and PCI, in order to provide ideal support for today's, as well as future, CPU's and chipsets.

Compact Size

The module's dimensions are a mere 70x70mm². This means it can be easily integrated into size constricted systems.

Slim Design

Compared to COM Express®, Qseven® enables slimmer mechanical housings.

SGeT e.V.

The Qseven® Specification is hostet by the 2012 founded SGeT standardization group. congatec is founding member, board member and Qseven® development team member of the SGeT.

COM Express® is a PICMG® standard that defines a Computer-On-Module, or COM, packaged as a super component. The defined interfaces provide a smooth transition path from legacy interfaces to modern differential signals. This includes DisplayPort, PCI Express®, USB 3.0 and Serial ATA. congatec was editor within the PICMG® for the COM Express® specifications 2.0 /2.1 and for the COM Express® Design Guide.

New interfaces
COM Express® defines 440 interconnect pins between the COM Express® module and the carrier board. Legacy buses such as PCI, parallel ATA are supported with type 2 modules. Type 6 modules feature additional PCI Express® 2.0 Lanes, USB 3.0, 3 DisplayPort/HDMI outputs and no longer multiplexes the PEG port with graphic signals.

Legacy Free
COM Express® is a legacy free standard. Outdated interfaces such as floppy, PS/2 keyboard/mouse, LPT are no longer supported. If required, these legacy interfaces can be optionally generated on the customized carrier board.
The Type 6 pin-out definition follows that path. IDE and 32 Bit PCI Bus are replaced by the new video interface DDI (switchable to DVI/HDMI or DisplayPort), additional PCI Express® lanes and the SuperSpeed signals for USB 3.0.

Size
COM Express® describes four different sizes. The major form factors are the Compact (95x95mm²) and the Basic (95x125mm²). The primary difference between the modules is the overall physical size and the performance envelope supported by each.

Thermal Design
As with Qseven® and XTX/ETX, the COM Express® definition includes a heatspreader that acts as a thermal interface between the COM Express® module and the system's cooling solution. All heat generating components are thermally conducted to the heatspreader in order to avoid hot spots.
The heatspreaders and cooling solutions for the high power modules utilize congatecs patented high efficient flat heat pipes in order to allow for maximum performance and highest reliability.

PCI Express®
COM Express® offers up to 24 PCI Express® lanes. This allows the customer to equip their embedded PC application with the next generation of PC performance. PCI Express® is a low pin count interface with maximum bandwidth per pin. PCI Express® is defined for a maximum bandwidth of up to 8 GBit/s per lane and direction.

GPIO
COM Express® defines freely usable general purpose inputs and outputs.

PCI Express® Graphics (PEG)
The PEG interface utilizes up to 16 PCI Express® lanes in order to drive an external ultra high performance graphic controller located on the carrier board. The PEG Port is available with the conga-BP77 Type 2 implementation and with most Type 6 modules.

USB
The Type 2 modules feature up to 8 USB 2.0 ports. New with Type 6 are the additional SuperSpeed signals for up to four USBs. Up to 4 USB 3.0 ports (including USB 2.0) and 4 USB 2.0 ports are available now.

Video Output
Common video outputs for Type 2 and Type 6 modules are VGA and LVDS for direct flat panel support. With Type 6, the Intel® SDVO interface was reduced to a maximum of 1 channel. New for Type 6 is the implementation of 3 DDI (Digital Display Interface). Each of the DDI can be switched to TMDS (for DVI or HDMI) or DisplayPort. The current Intel® implementation additionally allows the first DDI to be switched to SDVO mode. Future Type 6 modules will also allow for an embedded Displayport. This eDP interface will be multiplexed with the LVDS A channel.

COM✦Express®

conga-MCB|COM Express® – Mini Carrier Board

conga-CEVAL

conga-TEVAL

Full featured carrier board for COM Express® Compact Type 2.

1x miniPCI Express Socket

1x RJ45 connector with integrated Gigabit Ethernet Transformer

1x CFAST Socket, 2x SATA, 1x 4 bit SD Card Socket

2x USB at the front panel, 4x USB pin header

On board PC speaker, Line Out, Mic In at front panel

1x Display Port from DDI port C and 1x HDMI from SDVO port B

LVDS interface (EPI - Embedded Panel Interface) 40 pin 1 mm 2 rows box header

Backlight connector, 4 pin 2.00 mm box header

On board lithium battery for CMOS backup and real time clock

All signals for ACPI battery support (conga-SBMC[3]) at the feature connector

5 pin Micro-Fit Power Connector, 3 pin Fan header, 12 V, tacho signal

Size 145 x 95 mm

Evaluation carrier board for COM Express® Type 2 modules

To achieve a quick start with COM Express® congatec offers an evaluation carrier board, which routes all the COM Express® signals to standard interface connectors. Supports COM Express® Compact and Basic modules using connector Pinout Type 2.

4x1 PCI Express®, 1x Express Card, 1x 16 PCI Express® Graphics (PEG), 1x Mini PCI Express® Card, 4x 32 bit PCI

Gigabit Ethernet

6x USB

HDA compatible codec

AC97 optional via connector

4x SATA, 1x PATA

2x COM, 1x LPT, 1x Floppy, PS2 kbd./mouse PCI/LPC Postcode display System speaker, Power button, Reset button, CMOS Battery

CRT connector, LVDS interface

Evaluation carrier board for COM Express® Type 6 modules.

To achieve a quick start with COM Express® congatec offers an evaluation carrier board, which routes all the COM Express® signals to standard interface connectors. Supports COM Express® Compact and Basic modules using connector Pinout Type 6.

6x1 PCI Express®, 1x Express Card, 1x 16 PCI Express® Graphics (PEG), 1x Mini PCI Express® Card

Gigabit Ethernet

6x USB

XXXX

XXXX

XXXX

2x COM, 1x LPT, 1x GPIO/SDIO, LPC Postcode display System speaker, Power button, Reset button, CMOS Battery

CRT connector, LVDS interface

COM✦Express®

conga-CKIT

conga-Cdebug

This complete kit provides the ability to start evaluating COM Express® modules immediately.

conga-CEVAL evaluation carrier board

conga-Cdebug Post-Code and debug card with cables

conga-FPA2 flat panel adapter with cables

HDA (High Definition Audio) adapter card

Dual DVI-D ADD2 card

ATX power supply with cables

USB Memory Stick

Cable set for IDE, SATA

COM Express® Debug Platform. The conga-Cdebug provides a debug platform for your application specific carrier board. Simply use it as a transparent debug interface between your carrier board and the COM Express® module.

Postcode display for LPC or PCI

LPC Firmware Hub Flash (FWH)

2x SATA connector

Power connector for carrier board independent operation

VGA

2x USB

Power and reset switch

LED`s: 4x GPIO status , 4x Command Byte Enable (CBE=PCI bus activity)

Size 95 x 95 mm

COM Express®

conga-FPA2

Universal flat panel adapter board that has been designed to be EPI (Embedded Panel Interface) compliant. It can be used for either prototyping, demonstration purposes, or for debugging certain issues. It may also serve as a reference for the implementation of panel adaptations on customer specific carrier boards.

Multiple I/O Combinations
LVDS to TTL
18 and 24 Bit single-pixel support
Configuration Memory EPI compliant EEPROM for custom panel settings
Power Management All typ. supply voltages selectable
Fully s/w controlled power sequencing
Backlight Connector: Supports most backlight converters
Software controlled brightness adjustment

SMART Battery Manager Module

conga-SBM³ is a complete battery manager sub system. It is designed for the use with low power congatec COM Express® compact modules and congatec Qseven® modules.

Supports battery two smart batteries with configurations 2S up to 4S
Dual charge and discharge for high efficiency
S3 (Suspend to RAM) / S5 (Soft-Off) support
Zero current from batteries in off mode
LEDs provide a direct view of charging and battery capacity status
Input voltage of 8 - 30V DC, with input power delimitation
Output 12V / ~35W, 5V / ~20W
Battery charging max. 4A or 2x 2A in dual charge mode
Temperature: Operating: 0 .. +70°C, Storage: -25 .. +80°C

COM Express®

conga-HDMI / DisplayPort adapter

Add2 Card for DisplayPort
The conga-ADD2DP provides two DisplayPort and two HDMI interfaces

conga-LDVI

DVI Converter Module for LVDS. Compact module to convert LVDS to DVI-D. It can be used with either Express®, Qseven®, XTX™ or ETX® modules. It`s now possible to realize a dual port DVI-D system independent of the typical Video Output Ports (SDVO or DVO).
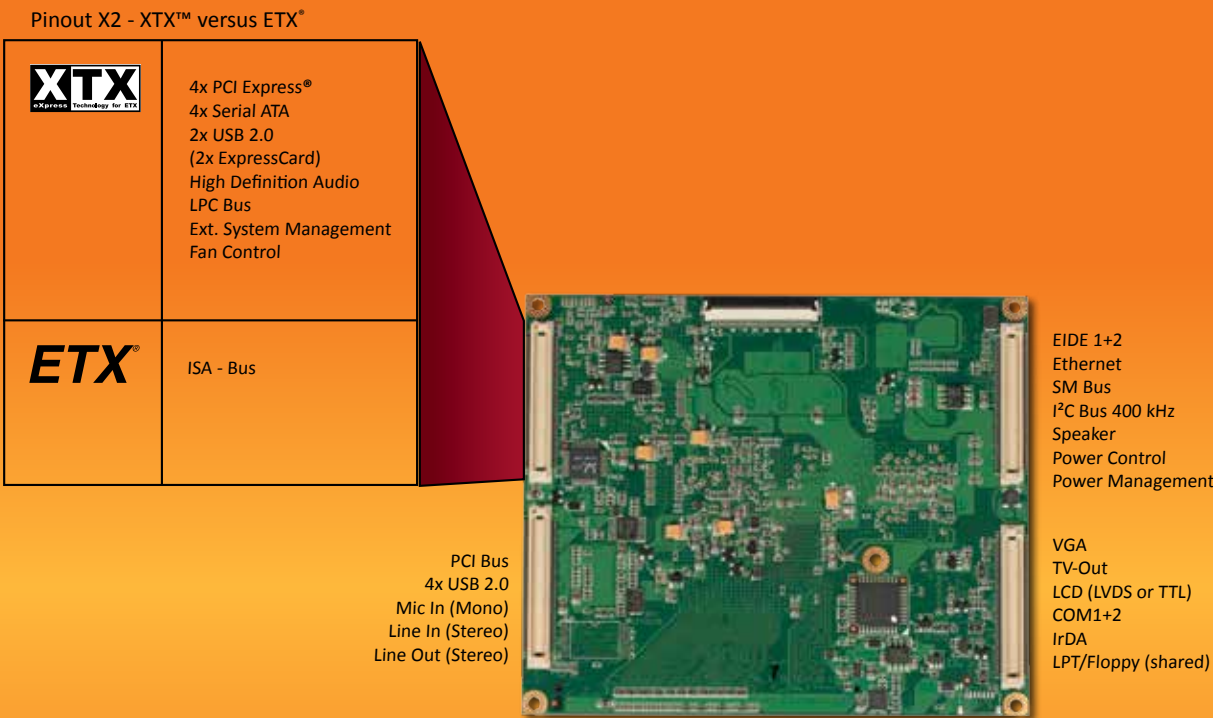

COM Express®

Single DVI-D ADD2 Card

ADD2 display adapter card with single DVI-D digital output. Suitable for all Intel® based platforms that support Serial Digital Display Outputs (SDVO) on the standard x16 PCI Express® Graphics (PEG) port.

Dual DVI-D ADD2 Card

ADD2 display adapter card with dual independent DVI-D output. Suitable for all Intel® based platforms that support Serial Digital Display Outputs (SDVO) on the standard x16 PCI Express® Graphics (PEG) port.

Pinout X2 - XTX™ versus ETX®

XTX
4x PCI Express®
4x Serial ATA
2x USB 2.0
(2x ExpressCard)
High Definition Audio
LPC Bus
Ext. System Management
Fan Control

ETX®
ISA - Bus

EIDE 1+2
Ethernet
SM Bus
I²C Bus 400 kHz

TV-Out
LCD (LVDS or TTL)
COM1+2
IrDA
LPT/Floppy (shared)

PCI Bus
4x USB 2.0
Mic In (Mono)
Line In (Stereo)
Line Out (Stereo)

XTX™ is an expansion and continuation of the well established and highly successful ETX® standard. XTX™ offers the latest I/O technologies on this proven form factor. Modern embedded applications rarely use the ISA bus and XTX™ implements the PCI Express® bus on the X2 connector, thus guaranteeing longevity for XTX™.

XTX™ – Advantages

PCI Express®
In addition to the 32 bit parallel PCI bus, XTX™ offers 4 PCI Express® lanes. This allows the customer to equip their embedded PC application with next generation of PC performance. PCI Express® is a low pin count interface with maximum bandwidth per pin.

Serial ATA Interfaces (SATA)
SATA is an enhancement of the parallel ATA therefore offering higher performance. As a result of this enhancement the traditional restrictions of parallel ATA are overcome with respect to speed and EMI.

High Speed USB
XTX™ offers two additional USB 2.0 ports thereby increasing the total amount of USB ports available to 6.

Backwards Compatible to ETX®
XTX™ is 100 % backwards compatible to the ETX® standard. Most customer specific carrier boards will not require a redesign in order to use congatec's XTX™ modules. The ISA bus can be implemented through the use of a PCI-ISA bridge on the customer specific carrier board. As an alternative to this the customer can use the readily available XTX™ LPC bus.

LPC Bus
As a replacement to the no longer supported ISA bus, XTX™ offers the LPC (Low Pin Count) bus. The LPC bus corresponds approximately to a serialized ISA bus yet with a significantly reduced number of signals.

Identical Mechanics to ETX®
The size (95x114 mm), the mounting, the height, the connectors and the heatspreader are exactly the same as defined in the ETX® specification. Existing ETX® solutions can easily switch to the innovative XTX™ platform without any mechanical change.

Upgrade to XTX™
Applications which do not utilize the ISA bus can directly upgrade to XTX™ modules. The signals at connectors X1, X3 and X4 are equal to ETX®. Only the signals at the X2 connector have been redefined in order to support PCI Express®, SATA, LPC and more. Existing ETX® carrier boards can easily be upgraded to take advantage of these new and fast interfaces.

The ETX® standard

ETX® was one of the very first Computer-On-Module concepts ever. It was defined in 1998 by JUMPtec as an open standard. ETX® is a well established and highly successful standard. It offers most standard PC I/O's on a compact form factor. ETX® is the best module standard when legacy interfaces i.e. ISA are required.

XTX

XTX™ Modules

- Enhanced lifetime for ETX®
- Featuring PCI Express® and SATA
- High scalability
- ETX® compatible, no ISA Bus
