FEATURES

Multimodal detection – High precision, high accuracy pre-calibrated sensors

Simple user interface – Web interface and mobile app

Compact and lightweight – Ideal for fixed (e.g. light poles) and mobile installations (e.g. construction sites)

Reliable – For uninterrupted service and reduced TCO

- **Traffic areas** (highways, railways, airports, ports)
- **Industrial areas** (chemical, manufacturing, steel companies)
- **Costruction sites**
- **Urban areas** (schools, hospitals, residential zones)

ReliaSENS 18-12 is a compact, easy to install environment monitor system that allows to collect and analyze air quality parameters, electromagnetic fields, ionizing radiation levels and (optionally) sound pollution.

ReliaSENS 18-12 is the ideal solution for private and public entities that need to get real time, 24/7 data, that scales from a single device to a large monitoring network.

Thanks to its Cloud technology, ReliaSENS 18-12 offers a simple interface to manage the device and access the data. It provides a user-friendly Web interface and mobile apps compatible with Android and iOS, to enable immediate fruition through PCs, tables and smartphones.

The Web GUI allows to set thresholds and automatic alerts (e.g. SMS, E-Mail, Twitter, etc.) Moreover, the system generates metrics such as hourly and daily averages of the sensors' data.

Data can be easily exported and integrated with existing IT systems to perform statistical analyses and to identify spatial and time patterns related to pollutant generation and propagation.
