## Description

The FSA321 is a Double-Pole, Double Throw (DPDT) multiplexer that combines a low-distortion audio and a USB2.0 High-Speed (HS) switch path. This configuration enables audio and USB data to share a common connector port. The architecture is designed to allow audio signals to swing below ground. This means a common USB and headphone jack can be used for personal media players and portable peripheral devices.

Since USB2.0 is an industry standard for shared data-path in portable devices, FSA321 can be configured for automatic  $V_{BUS}$  detection. The FSA321 includes a power-off feature as well as over-voltage tolerance to minimize current consumption when  $V_{SW}$  exceeds  $V_{CC}$ .

Typical applications involve switching in portables and consumer applications, such as cell phones, digital cameras, and notebooks with hubs or controllers.

## Pin Definitions

Pin #	Name	Description
9	V <sub>CC</sub>	Power supply
5	A/LP Sel	Audio Select Override and Power-Save Mode. This pin can be used to override USB Sel for applications where analog audio is transmitted on the USB D+, D- lines. This same select pin is used to put the FSA321 in low-power mode when USB Sel is LOW, not transmitting audio signals or USB data. The FSA321 has a weak internal pull-down, setting its default state to LOW and allowing this pin to float when not in use.
8	USB Sel	USB Path select pin. Can be connected to USB connector V <sub>BUS</sub> pin for automatic USB detection.
10, 1	D+, D-	USB data bus input sources
2, 3	R, L	Audio right and left input sources
7, 6	D+/R, D-/L	USB and audio common connector ports

## Truth Table

V <sub>CC</sub>	USB Sel <sup>(1)</sup>	A/LP Sel	Audio Mode	USB Mode	Remarks
LOW			OFF	OFF	Disabled Inputs High-Z
HIGH <sup>(2)</sup>	HIGH <sup>(2)</sup>	LOW	OFF	ON	USB Communication
HIGH <sup>(2)</sup>	HIGH <sup>(2)</sup>	HIGH <sup>(2)</sup>	ON	OFF	Audio Override on USB
HIGH <sup>(2)</sup>	LOW	HIGH <sup>(2)</sup>	OFF	OFF	Low Power Mode
HIGH <sup>(2)</sup>	LOW	LOW	ON	OFF	Audio Out

### Notes:

- Forcing USB Sel HIGH when V<sub>BUS</sub> is present allows for automatic USB detection.
- HIGH is the threshold as defined to meet USB2.0 V<sub>CC</sub> requirements and audio supply threshold in a system (see DC Tables).

## Functional Description

The FSA321 is a combined USB and audio switch that enables sharing the D+/D- lines of a USB connector with stereo audio CODEC outputs. The USB Sel pin has an internal pull-down resistor that results in a default audio-mode configuration. The switch can be configured for auto USB detection by connecting the  $V_{BUS}$  pin to the USB Sel pin. The audio switch path also handles negative signals, eliminating the need for large coupling capacitors and greatly reducing the potential for audio pop. Termination resistors on the audio R and L ports

are enabled when the switch is in USB mode, this also helps reduce audio pop when enabling the audio path.

The FSA321 allows for an audio override state by forcing A/LP Sel high when USB Sel is high. This is useful for USB car kit applications or if the device is in a cradle charger when “Send/End” is pressed.

## Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

### Notes:

- On resistance is determined by the voltage drop between the A and B pins at the indicated current through the switch.
- Δ R<sub>ON</sub> = R<sub>ON max</sub> – R<sub>ON min</sub> measured at identical V<sub>CC</sub>, temperature, and voltage. Worst-case signal path, audio or USB channel, is characterized.
- Guaranteed by characterization, not production tested.
- Flatness is defined as the difference between the maximum and minimum values of on resistance over the specified range of conditions.

## ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, [www.fairchildsemi.com](http://www.fairchildsemi.com), under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
