The drawing shows a rectangular display module with a width of 78.2±0.15 mm and a height of 65.0±0.15 mm. The main body is 73.2 mm wide and 60 mm high. There are four mounting holes at the corners, each with a 2.5 mm diameter through-hole and a 5.0 mm diameter pad. A 20-pin FPC connector is on the left side, and a 54-pin FPC connector is on the top side. A crosshair is located in the center of the module. The drawing is labeled with 'A' through 'D' on the left and '1' through '6' on the top. A table at the bottom right contains the date, unit, and model information.

Controller Information

Built-in SSD1963 controller

Please download specification at http://www.newhavendisplay.com/app_notes/SSD1963.pdf

MCU Interface

The controller board operates in 8080 mode. This interface uses /WR to define a write cycle and /RD for read cycle. If /WR goes low when the /CS signal is low, the data or command will be latched into the system at the rising edge of /WR. Similarly, the read cycle will start when /RD goes low and end at the rising edge of /RD.
