

## 93334

## LINEAR INTEGRATED CIRCUIT

### HIGH ENERGY IGNITION CIRCUIT

#### DESCRIPTION

This device is designed to use the signal from a retractor type ignition pickup to produce a well controlled output from a power darlington output transistor.

#### FEATURES

- \* Very Low Peripheral Component Count
- \* No Critical System Resistors
- \* Wide Supply Voltage Operating Range (4.0V ~ 24V)
- \* Overvoltage Shutdown (30V)
- \* Dwell Automatically Adjusts to Produce Optimum Stored Energy without Waste
- \* Externally Adjustable Peak Current
- \* Transient Protected Inputs and Outputs

#### ORDERING INFORMATION

| Ordering Number | Package | Packing   |
|-----------------|---------|-----------|
| 93334G-S08-R    | SOP-8   | Tape Reel |

Note: Pin Assignment: G: Gate D: Drain S: Source

#### MARKING

■ PIN CONFIGURATION

■ BLOCK DIAGRAM AND TYPICAL APPLICATION

\* Optional parts for extended transient protection  
 \*\* A 350V zener clamp is required when using the standard BU941/BU931  
 This clamp is not required if a selected version with  $V_{CE0(SUS)} \geq 550V$  is used

Figure 1

Component Values

|             |  |
|-------------|--|
| Pickup      | Series resistance = $800\Omega \pm 10\%$ @ $25^\circ C$ , inductance= $1.35H$ @ $1.0kHz$ @ $15Vrms$  |
| Coil        | Leakage $L=0.6mH$ , primary $R=0.43\Omega \pm 5\%$ @ $25^\circ C$ , primary $L=7.5mH \sim 8.5mH$ @ $5.0A$  |
| $R_L$       | Load resistor for pickup= $12K\Omega \pm 20\%$   |
| $R_1, R_2$  | Input buffer resistors provide additional transient protection to the already clamped inputs= $20k\Omega \pm 20\%$   |
| $C_1, C_2$  | For reduction of high frequency noise and spark transients induced in pick-up and leads; optional and non-critical   |
| $R_{BAT}$   | Provides load dump protection (but small enough to allow operation at $V_{BAT} = 4.0V$ ) = $300\Omega \pm 20\%$  |
| CFilter     | Transient filter on $V_{CC}$ , non-critical  |
| $C_{DWELL}$ | Stores reference, circuit designed for $0.1\mu F \pm 20\%$   |
| $R_{GAIN}$  | $R_{GAIN}/R_{D1}$ sets the DC gain of the current regulator = $5.0k\Omega \pm 20\%$  |
| $R_{D2}$    | $R_{D2}/R_{D1}$ set up voltage feedback from $R_S$   |
| $R_S$       | Sense resistor ( $P_{DAG}$ in thick film techniques) = $0.075\Omega \pm 30\%$  |
| $R_{DRIVE}$ | Low enough to supply drive to the output Darlington, high enough to keep $V_{CE(SAT)}$ of the $I_C$ below Darlington turn-on during load dump = $100\Omega \pm 20\%$ , $5.0W$              |
| $R_{D1}$    | Starting with $35\Omega$ assures less than $5.5A$ , increasing as required to set $5.5A$<br>$R_{D1} = (I_{O(PEAK)} R_S - V_{REF}) / ((V_{REF}/R_{D2}) - (1.4/R_{GAIN})) \approx 100\Omega$ |

■ ABSOLUTE MAXIMUM RATINGS

| PARAMETER   | SYMBOL          | RATINGS   | UNIT  |
|---|-----------------|-----------|-------|
| Power Supply Voltage-Steady State Transient 300ms or less | $V_{CC}$        | 24        | V     |
|   |                 | 90        |       |
| Output Sink Current-Steady State Transient 300ms or less  | $I_{OUT(SINK)}$ | 300       | mA    |
|   |                 | 1.0       | A     |
| Power Dissipation<br>Derate above 25°C                    | $P_D$           | 1.05      | W     |
|   |                 | 12        | mW/°C |
| Junction Temperature                                      | $T_J$           | +125      | °C    |
| Operating Temperature                                     | $T_{OPR}$       | -40~+125  | °C    |
| Storage Temperature                                       | $T_{STG}$       | -40 ~ 150 | °C    |

Note: Absolute maximum ratings are those values beyond which the device could be permanently damaged. Absolute maximum ratings are stress ratings only and functional device operation is not implied.

■ ELECTRICAL CHARACTERISTICS ( $V_{CC} = 13.2V_{DC}$ , circuit of Figure 3, unless otherwise specified)

| PARAMETER  | SYMBOL        | TEST CONDITIONS        | MIN | TYP  | MAX  | UNIT             |
|--|---------------|------------------------|-----|------|------|------------------|
| Internal Supply Voltage, Pin 6   | $V_{CC}$      | $V_{BAT} = 4.0V_{DC}$  |     | 3.5  |      | $V_{DC}$         |
|  |               | $V_{BAT} = 8.0V_{DC}$  |     | 7.2  |      |                  |
|  |               | $V_{BAT} = 12.0V_{DC}$ |     | 10.4 |      |                  |
|  |               | $V_{BAT} = 14.0V_{DC}$ |     | 11.8 |      |                  |
| Ignition Coil Current Peak,<br>Cranking RPM 2.0Hz ~ 27Hz                         | $I_{PEAK}$    | $V_{BAT} = 4.0V_{DC}$  | 3.0 | 3.4  |      | $A_{PEAK}$       |
|  |               | $V_{BAT} = 6.0V_{DC}$  | 4.0 | 5.2  |      |                  |
|  |               | $V_{BAT} = 8.0V_{DC}$  | 4.6 | 5.3  |      |                  |
|  |               | $V_{BAT} = 10.0V_{DC}$ | 5.1 | 5.4  |      |                  |
| Ignition Coil Current Peak, Normal RPM   | $I_{PEAK}$    | F=33Hz                 | 5.1 | 5.5  |      | $A_{PEAK}$       |
|  |               | F=133Hz                | 5.1 | 5.5  |      |                  |
|  |               | F=200Hz                | 4.2 | 5.4  |      |                  |
