

## POWER FACTOR CORRECTOR

## ■ DESCRIPTION

The UTC **L8562** is a Power Factor Corrector, which can work in wide input voltage range applications (from 85V ~ 265V) with an excellent THD. It has very low start up current (about 20 uA) and a disable function on the ZCD pin, which is designed to keep lower current consumption in stand by mode.

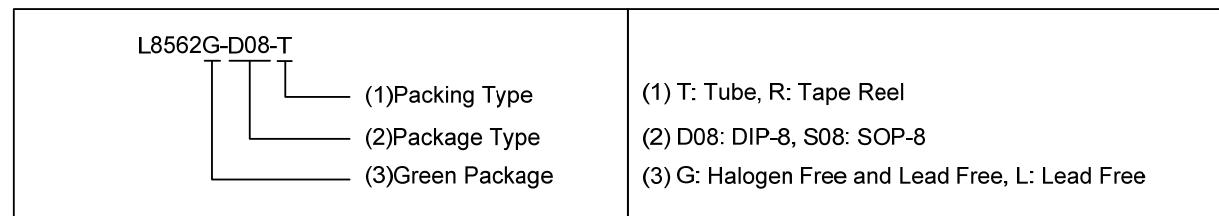

The device is operating in transition mode, and is able to drive a Power MOS or IGBT with a ± 400mA current for sourcing and sinking.

## ■ FEATURES

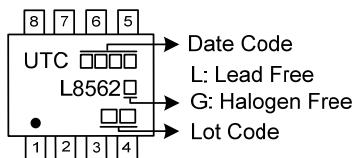

- \* 1% Precision (@  $T_J = 25^\circ\text{C}$ ) Internal Reference Voltage
